U.S. CUSTODIAN OF DEMOCRACY Phil A. La Brie, who has recently re- SO SAYS MARCASSON America In War of Self-Preservation SUCCESS MEANS SECURITY Every Ounce of Man and Woman Pow-

er Needed.-Supreme Lesson of Co-ordination Taught.

Isaac F. Marcasson, in a special article for the Philadelphia Public Ledger says, America after the war will be the commanding world authority. He forsees England, France and the United States as custodians of democracy. If Germany is not beaten on the battlefields of Europe, then the deadly conflict with her world ambitions must be fought on our own shores. This war has taught the supreme lesson that self - preservation is the first law the fighting is in France; the issues

There is one definite reason why it is up to the whole American people now Business outlooks for Americans are that every advance of the Allied armies particularly bright in Russia, he says: is one more step in the direction of their own national security; that every re_ verse is a blow to us.

> The success of the Allied armies means peace and security for the great nations of the world for years to come. Failure means the constant threat and, ultimately, the effort to impose all autocratic ideas of government upon every democracy in the Western Hemisphere. In brief, Germanic triumph means putting the Monroe Doctrine into the category of "scraps of papers."

It is because America is in a war of self-preservation that she must enlist selves with men of their own choice for fury of war is almost invariably followthe fact the war is work. The habit sticks. War has no place for a slacker. Peace, therefore, finds the skirker employed, and he soon discovers that it is good business to keep on being employed. Then too she will come forth from

This Little Bird Is a Formidable Foe of the Cankerworm.

In May the chickadees build their nests in the cavity of a decayed tree trunk or limb and line them with moss, plant down and feathers. From five to eight white eggs spotted with reddish brown are laid in each soft cradle. The chickadees eat in the summer many insects and their eggs. Farmers dread the cankerworm, which, unchecked, completely destroys apple orchards. At one meal this tiny bird will eat 250 eggs of the cankerworm and will have several meals a day.

During its migration in October the chickadee is more numerous in the New England states than in the summer. Throughout the greater part of its range, from Labrador to Maryland and in the Alleghenies southward to North Carolina, these merry midgets are found at all seasons. But it is with the fall and winter that they are generally associated. No one need feel lonely when these little black and white birds are around. They are so friendly and tame and some of their notes sound so much like words that they seem to be talking. Besides the familiar "chick-a-dee" call they have a high, sweet whistle of two or three notes.

In the autumn the partridge berries are ripe, and upon them these birds have many a feast. And later the berries of the wintergreen, Solomon's seal, dogwood and Indian cucumber may be used as food .-- Philadelphia Record.

OLD NEW ENGLAND CUSTOMS.

In the Days When Brides Were Stolen and Had to Be Ransomed.

A half savage custom prevailed in many early New England towns. A group of those young men who had not been invited to the wedding would invade the house when the marriage ceremony had been performed and drag away the bride to an inn or some other house, when the groom and his party would follow and rescue her by paying a forfeit of a dinner to the bride stealers. In western Massachusetts this custom lingered until Revolutionary times. In Judd's "History of Hadley' the names of stolen brides are given Mrs. Job Marsh, married in 1783, is said to have been the last bride thus stolen. A very rough variation of this custom is reported to be still in vogue in some localities in Rhode Island. Mme, Sarah Knights in her journal of a horseback ride from Boston to New York in 1704 tells of a ridiculous alteration of this marriage custom, which she saw in Connecticut-to steal the

Many other curious fashions prevailed in different localities. In some towns the young men rode or ran to the bride's house for a bottle of rum. In others the bees were told of the wedding and given bride cake. In still others the unmarried girls scrambled for the bride's garter to see who would be married next.-Alice Morse Earle in Magazine of American History.

MABEL E. HERRING No. 9660 Equity In Equity.

FRANCIS A. HERRING

VS.

The object of this Bill is to procure a divorce a Vinculo Matrimonii by the plaintiff Mabel E Herring from the defendant Francis A. Herring. The bill states in substance that the parties were married on the 20th day of May, A. D., 1916; that the plaintiff is a resi-dent of Frederick County, State of Maryland where she has resided all her life and that the defendant is a non resident of the state of Maryland; but resides in the State of Pennsylvania; that the plaintiff has been a faithful wife towards the defendant Francis A. Herring; that the defendant Francis A. Herring has committed the crime of adultery in the State of Pennsylvania with one Grace Herring, between May 1st, 1916 and the filing of the bill, and that the plaintiff has not lived or cohabited with the defendant since she has discovered his said adulteries; that one child was born as the result of said marriage namely Francis H. Herring aged one year, and she asks for the custody of their infant child, and the bill prays for an absolute divorce and for general relief, and for process.

It is thereupon this 3rd day of August, A. D , 1917, by the Circuit Court for Frederick County, in Equity, ordered that the plaintiff give notice to the defendant, adult, a non resident of the State of Maryland, residing in the State of Pennsylvania, the said Francis A. Herring, of the object and substance of said bill by causing a copy of this order once a week for four successive weeks prior to the 8th day of September, A. D., 1917, warning him to be and appear in said court, in person or by soli-At the solicitation of friends through-out the county I, therefore, again an-if any he has, why a decree should not pass as prayed. The amount paid in by regular and occasional habitues of the "lobster palaces" may safely be put at 50 per cent more, or \$1,063,975,500. Yes, high living comes high, and it is time to think of having less of it .-- Boston Post.

How Coal Was Named.

The name of coal was first applied only to fuel made of charred wood or what we call charcoal, says an exchange. When the use of mineral coal began it was called sea coal, because it was at first only found along the seashore along with seaweed and other wreckage cast up by the waves and thus supposed to be of marine origin. From its resemblance in color and burning qualities to charcoal, it finally received the simple name of coal.

Humor.

Humor is the true sixth sense. Lack. ing it, one misseth the joy of living. It lurks under the serious affairs of life as a violet lurketh under the trees of the forest and when so found is more to be prized than that which shouteth itself from the housetops .-Cleveland Plain Dealer.

Potatoes.

The stem end of a potato is the end that was attached to the vine; the opposite end is the seed end. The seed end might be called the top of the potato and the stem end the bottom. The buds at the seed end swell and grow first .-New York Sun.

Expert Advice For the Automobile Owner

Queries and Replies Covering Matters of Importance to the Man Who Runs a Car

How will I burn the carbon out of the cylinders of my engine with oxy-acetylene flames? rod bearing give?

An oxygen-acetylene flame is never used for burning carbon out of cylin- it to run freely. The lateral or side ders. Acetylene is of no use for this purpose, but by employing oxygen alone a very satisfactory job can be done. The oxygen is used because it supports combustion five times as readily as air does, and therefore once the carbon is ignited it will burn rapidly, although it will not burn at all in air. In cleaning carbon from the cylinders in this manner the first thing to do is to remove the valve caps, then the cylinder is filled with oxygen. A small piece of burning waste is then dropped into the cylinder and combustion immediately begins in a very vigorous manner. In fact, sometimes the carbon is consumed so rapidly that sparks will fly out of the valve openings, and for this reason it may be advisable to cover the front part of the car with damp cloths to catch these sparks. From this it must not be thought that there is any danger of setting the car afire because the continued use of oxygen has demonstrated that there is no possibility of this occurring. If damp cloths are not used the most that will happen is a slight marring of the varnish by the sparks. The oxygen is supplied from a tank in which it is stored under very high pressure, and as the pressure at the delivery nozzle of the outfit must be small a reducing valve must be used to bring the pressure down to a reasonable amount. Therefore between the tank and the tube that carries the gas to the cylinders there is a reducing valve that automatically lowers the pressure. A gauge is generally fitted to the tank to indicate how much gas there is in it, because as the quantity becomes smaller the pressure drops.

Will you please tell me of some good preparation for silvering the parabolic reflector used for the electric headlight on my car?

First remove all signs of the previous silvering. This is best done by laying the reflector on a block with the face side up and driving nails around edge. Then use very fine emery cloth, backing. Then melt together two and two ounces of tin. When this has reached the boiling point of water stir in eight ounces of mercury. While the mixture is warm apply it to the reflector with a smooth brush, and when it obtained in this way are not uniformly as good as would be obtained by send will a professional.

How much play should a connecting A connecting rod bearing should have

no more play than is necessary to allow play varies in different motors, and this, too, should be no more than is required to permit the crank shaft to turn freely when all rods and pistons and cylinders are assembled. When scraping in a set of connecting rod bearings it is customary to make the babitt or white metal bearings so tight that the motor is cranked with difficulty, and then run with plenty of oil until the motor can be cranked freely, but a bronze bearing must be fitted as closely as possible without any apparent binding; in short, the rod must be free enough to swing on its pin by the force of its own weight. A bronze bearing if too tightly fitted will heat up and sieze very much quicker than a white metal bearing.

How can I make a paint for automobile rims to prevent rust?

Mix glycerin and powdered or flaked graphite to a creamy consistency and apply to the rims of the wheels after they have been thoroughly b. shtened up by sandpapering.

What is the advantage of a hit and baking pan. miss governor over the throttling governor on a stationary gasoline engine? The advantage of the hit and miss governor is that during the idle strokes the cylinder is flushed out by the scavenging charge of air, which makes the next explosion more powerful and assists in keeping the engine cool.

What is the cause of a crack across the center of the driving disk on the friction drive of my car? The exact cause would be hard to too heavy a load on the drive system, such as pulling out of a deep rut, etc.

What is the meaning or distinction of irreversible, semi-irreversible and re-

versible steering gears? Keeping in mind the common type of car which is steered by the front road wheels, an irreversible steering gear it so that the heads clamp down on its is one whose design is such that the road wheels can be turned in any deand be careful not to scratch the metal sired direction by operating the steering wheel, but the steering wheel canounces of lead, four ounces of bismuth not be turned by actuation of the road wheels. A semi-irreversible steering gear is a design in which it is possible to move the steering wheel by turning the road wheels, but so much effort would be required as to make the ophas cooled down sufficiently rub to a eration difficult. A semi-reversible polish with a woolen rag. The results steering gear, therefore, is a reversible one, though it exhibits a strong tendency toward irreversibility. A rever ing the reflector to a professional, for ble steering gear might be said to be the amateur lacks the skill, tools and one in which it is possible to move or equipment to do the work as well as operate the steering wheel by turning the front road wheels on their vertical

INCREASE YOUR YIELD BY USING GOOD WHEAT

Consult Your County Agent For Seed Wheat.

Owing to the fact that several severe hail storms passed through Frederick County during the past few months and destroyed the wheat crop in certain sections there will be a demand for seed wheat. Every one needing seed wheat should be on the lookout for a variety that long experience has shown to be best for his region. The best smooth varieties for the County are Curroll's Prolific and China. Fultzo, Mediterranean and Fultz so commonly grown are among the poorest yielders in the State. ness will have returned. The best bearded varieties are those belonging to the Fulcaster variety. The two or three weeks, by best of these are Bearded Purple Straw Deitz Longberry, Mammoth Red and Miracle. The Miracle should be seeded at the same rate as other varieties and not at the rate of two pecks per acre

> All seed wheat should be fanned and graded to remove weed seeds, small can be done with the ordinary fanning mill and an increase in yield of from 2 to 3 bushels per acre is not uncommon to well cleaned wheat over that sown

es it comes from the threshing machine. There are quite a few farmers in the County who have grown the above mentioned varieties and will have some seed wheat for sale. If you need seed wheat Oatmeal Cookies .- Take two cupfuls | call your County Agent and he will put get it early.

> The County Agent has a list of the parties baving seed wheat for sale and f you consult him, he will give you the name of the party nearest you offering seed wheat for sale.

> BAVARIAN VILLAGE OF OBER-AMMERGAU HAS SUFFERED

Made Famous by Decennial Performance of Passion Play.-Not One Actor Remains.

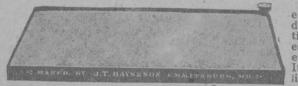

The little Bavarian village of Oberammergau made famous by the decennial performance of the Passion Play, has suffered severely by the war. From a population of eighteen hundred it has sent five hundred and fifty men to the mold in a small bread pan to cut in trenches. Not a man under fifty is left slices to fry. Other nuts such as hick- and all the men who have trained from childhood for the parts they presented but the peanuts are so common that with such dramatic power and genius. are gone. Some have lost a leg or arm, others are dead and those who are still in the trenches will probably suffer the same fate. Anton Lang, who has taken the part of Christ in the last three presentations of the play, although nearly fifty years old, has recently been drafted. The village now is one of broken

hearted women and hungry children. The performance originated in 2634 when the population made a vow if they escaped from the plague that prevailed every ten years they would present as a thank offering the play repre-

and we guarantee they will be put in first class condition.

In a gasoline engine is any more power obtained from the explosion by having the spark plug directly in front of the piston rather than at one side in a boss or recess?

There are two theories relative to the location of the spark plug in a reby having the spark plug in such a recess a spurt of flame enters the combustion space from the recess and as a result quickly ignites the charge. the engine gets so hot that I cannot Another theory is that by having the spark plug directly in the center of few miles the water will begin to boil the combustion-that is, so that the and consequently will all boil out of the spark plug points project outward into radiator. What is the cause of this? the combustion space itself-the gas is quickly exploded because it gives the flame a chance to propagate itself in of the motor. The most likely one of all directions. Practice favors a plug which merely has its points projecting into the combustion space.

the oil in an engine crank case?

Some people change it about every 1,000 miles, and it seems advisable to do it that often. After removing the oil through the plugs at the bottom of the crank case it is a good plan to fill the case to the normal level with kerosene. Start the engine, run it for a few seconds and then drain the kerosene thoroughly and fill with fresh engine oil. The kerosene cleans the crank case and cuts the gummed oil late. and other foreign matter.

Why do instructions tell us to retard the motor when working up through the gears on a selective transmission and to accelerate the motor when working down the same? It looks to me high gear. When it is evident that the timbered regions, others on rocky barthat it is unnecessary when the clutch is thrown out or the gear shift lever is at neutral position.

The reason the spark is retarded and the motor throttled down when shifting from a lower to a higher gear is that the motor must run slower on the more danger of hurting the springs the seeds of noxious weeds and onehigh gear to drive the car at the same speed that it was running on the low gear, and vice versa. The motor is accelerated when shifting from high to low gear to drive the car at the same speed as when it was on the high gear.

good, smooth surface and is also the gear of a motorcar as nearly irreversi. best for polishing reflectors that have ble as possible, for otherwise should the road wheels strike a stone or get into a rut in the road, which would tend to deflect them, the motion would be transmitted back through the steering mechanism to the steering wheel, causing it to revolve. This reversing of the action is very annoying and dangerous, as the driver must always have a very tight grip on the wheel so as to cess within the cylinder. One is that prevent this deflection, which might easily cause disaster.

FRIDAY, AUGUST 31, 1917.

"A glance over the pages of history reveals to us that of all institutions which affect the wellspring of human activity the newspaper is perhaps the greatest."

THE CHRONICLE will be independent in politics, progressive in spirit and a champion of what it conceives to be right. Its columns will always be open for a dignified discussion by the people of any subject that may seem to them interesting, or that may in anywise be a benefit to the community at large.

G Communications intended for publication in this paper, letters of a business nature in relation to the Chronicle, and all orders for Job Printing to be done at this office should be addressed to THE WEEKLY CHRONICLE.

FREDERICK COUNTY.

Frederick is next to the largest of the counties of Maryland. In population and wealth it ranks next to Baltimore county. In the fertility and productiveness of its lands it ranks among the first in the Union, and especially in the produc-tion of wheat. The area of this great county is 633 square miles. The great body of the people are of German, English and Scotch-Irish descent, the progeny mostly of the early settlers. The land is mostly of fine limestone quality, and the greater part of the county is a valley of rolling lands lying between the Linganore Hills and the Catoctin Mountain. This splendid valley is drained by the Monocacy river, and is one of the best farmed and most highly improved and produc-tive areas of the Union. The great crops are wheat and corn.—Mary-land Manual issued by Board of Public Works.

Keeps Itself in Repair and Constantly Maintains an Even Temperature Throughout Four Seasons.

To burn the fuel in a gasoline enwith air and an electric spark must be applied to ignite the mixture. In the human engine the process is much more elaborate, since a very wide variety of crude foods is taken, refined, quick-combustion, high-temperature en- Military Hospital at Neuilly, France. gine, while the human machine is a low-temperature and slow-combustion engine, which not only produces energy from its food, but lubricates itself, maintains an even temperature throughout the four seasons.'

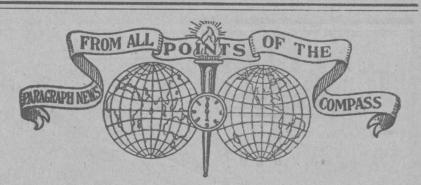

A man could not digest gasoline, nor could a gasoline engine run on butter. Nevertheless, the two classes and functions merge into each other. Science shows how alcohol is a curious illustration of this fact. An internal combustion engine could be run on alcohol and it is known that this fluid can be burned in the human body also, producing a vast amount of violent energy which is equivalent to that obtained in a gasoline engine when there is no load to carry. Physicians say that drunkenness is, in effect, racing the human engine beyond speed limits.

ORIGIN OF THE TOTEM POLE

Was Erected to Bear Emblems Which Usually Were Animals After Which Tribes Were Named.

Before people had individual names, the savage people who lived in clans or tribes referred to themselves in the name of some natural object, usually an animal which they assumed as the name or emblem of the clan or tribe. These names never applied to one individual more than another, but only to a tribe which had taken the "wolf" for its emblem was known as "Wolf," says

Later on they began to distinguish individuals by giving them additional such as "Lonely Wolf," "Growling to impair capital by overtaxation hither and yon there is the one wolf," or other names. The name of

EMMITSBURG.

In all Western Maryland-the beauty spot and the garden spot of the State-there is no town more attractive than Emmitsburg.

No people are more wide-awake, more knowable, more courteous to strangers than Emmitsburgians.

The location of Emmitsburg is ideal; the surrounding scenery is unmatchable; the climate is notedly healthful; its water-pure mountain spring water-cannot be surpassed. It is within easy access of Baltimore, Hagerstown, Frederick; eight miles from the National Battlefield at Gettysburg, near to the Mountain Resorts, and is surrounded by fertile farms and productive orchards.

Mount Saint Mary's College and Ecclesiastical Seminary-with an enviable reputation extending over 108 years-is located here; St. Joseph's College and Academy for young ladies-equally as noted during its 107 years of splendid acheivement-is also here.

There are excellent Schools-Public and Parochial-in Emmitsburg; two sound Banks, five Churches, a live Newspaper, modern Hotel accommodations, adequate Fire Department, progressive merchants, splendid physicians, good liveries, auto garages, many fraternal organizations, good railroad accommodations. There are four or five mails a day, telegraph, express and telephone service connecting all points; electric light and power, oiled streets.

There is business to be had in Emmitsburg; there are Factory Sites availabe. If you contemplate changing your place of residence-come to Emmitsburg, Frederick County, Md

is to destroy the very foundation haven where we would be, and of business.

CORN ON THE COB.

Our old friend Lucullus died too soon. He should have lived tion button that if Lu had sunk his pearly teeth (wasn't it Horace that unwittingly advertised the brand of Lucius Lucinius' tooth wash?) into a large, sweet, tender ear of boiled corn, properly buttered and salted, he would never after have craved an ambrosia cocktail, or been content with one of those seventeencourse Roycroftie food fests for which he was so noted.

on the cob about the finest gastronomic pastime you ever indulged in? TO THE REPUBLICAN VOTERS OF FREDERICK COUNTY.

Tuesday, September 11, is the day on which I am asking the Republican Voters of Frederick County to go to the polls and nominate me as one of their candidates for the office of County Commissioner. It would be a great pleasure for me to meet every voter personally, but as I cannot do that I will address you through this paper.

I prize highly the friendships which I have made and retained from boyhood up to the present time. During the past few days I have been making new and renewing old friendships with much pleasure. In the unknown voter who quietly goes to the polls and casts his ballot for me, I feel that I have found a new friend. If you do not know me ask some one from Buckeystown district, where I have lived for 36 years, or ask the older residents of Frederick Valley, north of Frederick city, where I was born and raised. I have an ambition to serve the people of the county as County Commissioner, and I appeal to the people to nominate me on September 11.

Sincerely,

DAVID OLAND. Buckeystown District.

The Weekly Chronicle

WEEVIL to estimate the loss each year from The Globe what is generally known to the farmer as "weevil." Not only is the actual feeding value lost in infected grain, but the presence of weevil, especially in wheat, regardless of how little the damage, always cuts the grade one or

two points. And now that the heavy rains of the summer have caused much wheat to sprout in the shock, or mold where it was hauled into the barn too wet or s one other precaution that must List of Those Who Hold Office in City needs be taken to conserve the small amount thus saved. Weevily wheat is not good feed, it is not good for flour, and it isn't good for seed.

In the work of controlling granary pests Prof. E. N. Cory, of the Entomology department of the State Agricultural College has issued a circular in which the Carbon Bisulphide Court meets at Frederick City, first Method Monday in February and September, for plained. first Method of control is thoroughly ex-

The term "weevil," as used, is a products. But it is probably the Angoumois moth that does the greatest damage, often working through as ored moth are deposited in masses bein the shock or in the granary and the larvae or worms hatching there from enter the grain and feed within. When ready to pupate, they cut their way to the outside shell leaving only the outside membrane over the exit hole. The moth, when it emerges from the pupa case, easily breaks this membrane and emerges from the grain to produce another generation of insects. If conditions are favorable many generations are produced in a year.

Fumigation with Carbon Bisulphide has proved the most effective method of control.

Carbon Bisulphide or Disulphide is a slightly yellowish liquid having a very disagreeable odor (about the same as that of a rotten egg) due to impurities. It is highly volatile, that is, evaporates quickly, and produces a gas heavier than air and very inflammable.

How To Use Carbon Bisulphide.

Carbon Bisulphide should be used at the rate of 5 to 8 pounds per 1,000 cubic feet of space in the granary or per every 100 bushels of grain to be fumigated. The outside temperature should be about 70 degrees at the time of fumigation for best results.

If the grain is in a room that is capable of being closed tightly, the liquid may be exposed in shallow pans above the grain, on saturated pieces of burlap or it can be poured into the pile through a piece of pipe.

If a tight room is not available the grain may be covered with a tarpaulin or a piece of canvass and the Carbon Bisulphide exposed beneath it. The greatest care should be used in

regard to fire. Never carry a lighted lantern, pipe or cigar into a barn where Carbon Bisulphide fumigation is in progress. The exposure should last for 36

hours. The fumigation should be repeated after an interval of two weeks. Shovel the grain over after each fumigation so as to air it and prevent the collection of moisture and possible subsequent heating. Where directions are followed there is no chance for human poisoning as the Carbon Bisulphide evaporates completely. Carbon Bisulphide can be purchased from almost any drug store in small quantities or from any chemical supply house. In large amounts it may be secured from E. R. Taylor, Penn Yan, N. Y., or the Independent Chemical Company, 72 Front street, New York City.

All These May Be Had At THE CHRONICLE OFFICE

Should further information be desired it can be had by addressing Prof. E. N. Cory, College Park, Md.

College Park, Aug. 23 .- Cows that come fresh in the spring give a good low. He says that he and a dentist flow of milk during that season when experimented with voltaic piles made pasture is abundant. When pastures of gold and amalgam, with blotters become short, the flow of milk will decrease unless the pasture is supple- with acetic acid, and when the amalmented with silage, soiling crops or a grain mixture. If the milk flow is permitted to decrease during the season | lytic action. of short pastures, the high production of the first few months cannot be recovered when pasture becomes abundant in the fall.

This means that the yearly production of milk is several hundred pounds less than it should be owing to the fact that the cows were short of feed for a few weeks during the hot, dry season.

Where silage or soiling crops are not available the following grain mixtures are recommended:

(1) Cornmeal 50 lbs. (2) Wheat bran.....100 lbs.

Cornmeal100 lbs. Cottonseed meal..... 25 lbs. Hominy meal or chop may be substituted for cornmeal.

There are always weevil in an old granary, and before the crop is placed in such, or removed from one bin to another, the Carbon Bisulphide method of fumigation should be used to rid the bin of these pests.

not properly incorporated in the mass chemical action is quite likely to folwet with sodium chloride and later

gam had been properly mixed they were unable to measure any electro-When decay does follow in such

ses, he says, it is due not to electrolytic but to chemical action. This causes disintegration of the filling, and, of course, as soon as this has begun he acids of the mouth and the juices of the food can penetrate to the unproected surface of the cavity and start urther decay. And this takes place rrespective of whether or not gold has

een used near by.

The editor of the local paper believed that he was doing a kindly act by suppressing from the list of "drunk and disorderly" on market day the name of a country subscriber that by rights belonged there. The subscriber, however, did not regard the omission as a

"I suppressed your name for your wife's sake." the editor politely explained.

"Well, that's the awkward part of it," the farmer said, "for, not seeing my name among the rest, she won't believe I came to town at all."-New York Times.

toms or in mows where old hay is al lowed to accumulate from year to year The moths are often noticed resting on the walls within barns where alfalfa and clover have been stored. The methods of control are preven

tive ones. Never stack alfalfa or clover on old bottoms or tops of stacks Old bottoms should be burned and mows should be thoroughly cleaned before new hay is stored. The only safe plan to follow is never to put new hay on the top of old hay.

Two Litters a Year.

The practice of raising two litters a year is gaining popularity because the brood sows are kept basy the whole year, the money is turned more quickly and there is less risk from cholera since the hogs are held on the farm only a short time. In this way all the feeders can be produced on the farm. While the practice is fairly successful. two litters a year cannot always be expected. More care is attached to the handling of early spring and fall pigs, and the maximum amount of grain is needed. The minimum amount of forage and cheap feeds can be used since the pigs are crowded and put on the market at six to eight months.

Provide a Hog Bath. Hogs do not always use mudholes as the result of choice. It is often a last resort. A cement tank, sunk ten or twelve inches in the ground and filled with clean cool water, answers much better.
