SAVED HALF-MILLION DOLLARS

Senator Hopeful That Presidents Order Will Fix Price of Newspaper.

Senator Fletcher told the Senate that the joint Congressional Committee on Printing had saved the Government half a million dollars by close supervision of paper purchases and its refusal to become panicky when others, scared by the false cry of shortage, were buying paper at excessive prices.

"I am hopeful," said the Senator, the news print paper manufacturers will at once recognize the justice of Monday. such an act and make their product by the Government.

MORE APPROPRIATION FOR GUNS

A \$60,000,000 Deficiency Amount For Ammunition Supplies.

Secretary Baker and Major-General Scott, chief of staff, of the Army, told the House Appropriation Committee of Greensboro, N. C., died Monday. approximately \$300,000,000 more needed for ordinance to be included in the new billion-dollar deficiency bill the committee is framing. A \$60,000,000 deficiency appropriation for ammunition reserve supplies and other naval purposes supplemental to appropriations already made and estimated for, was asked by Secretary Daniels.

INTENSIVE DRIVE TO RAISE \$1,-000,000 FOR THE CAMP LIBRARIES

The Week of September Twenty-Fourth Will Be Known as "Camp Liberty Week."

A million dollars to buy books for soldiers and sailors is the mark set by the American Library Association. This money will be collected by means of a campaign in the week beginning Sept. PLANS FOR MAKING NITROGEN 24, and the effort will be nation-wide.

and Polly Ann, I am going to tell you

WEBS IN THE GRASS.

This morning while I was walking in the field I saw in the grass the tents or injury. The feet of the young aniof a bold robber band.

I thought I heard Mrs. Fly say as she flew by me: "There are those spider webs stretched out on the grass. Well, the spiders won't catch me this time. It was very kind of Fairy Dewdrop to sprinkle the webs with drops of water so that we may see them and keep out of trouble."

But as it got warmer the drops were drunk up by the hot sun and went sailing up into the sky to make clouds. Then unless you had sharp eyes and looked closely you could not see the lacey tents, which were, after all, traps in which the sly spider hoped to catch dinner, breakfast and tea.

One spider caught a little brown skipper butterfly. As soon as he felt the web shake from the struggles of Mrs. Mary Wade Kalbach, President the insect up he darted through his funnel shaped stairway and pounced

upon the butterfly. Once a big brown wasp came buzzing across the garden and in flying too near the ground struck a spider's web.

The minute the spider saw what he had caught he was so frightened he was most ready to run downstairs again, but he feared for his precious web. It had taken a whole hour to

So the spider hurried to the edge of the web and began cutting away the threads that held the prisoner.

In a minute the wasp was free and dropped to the grass. Soon he was able to fly away, and then the spider came out of his hole and mended the broken web.

But the little dewdrops that had gone up to the sky and joined the nice big clouds must have told tales, for after awhile the clouds rolled over the sky till the sun was hidden, and a host of big raindrops came pattering to the

ALL AROUND

CARING FOR FOALS.

THE FARM

Proper Method of Feeding Young Horses During the Second Year. [Prepared by United States department or

Foals should be changed from dry feed to pasture gradually and should not be turned on pasture until the Well, said Uncle Ben to Little Ned grass is old enough not to become washy. Grass is an indispensable factor in the economical and proper physiological development of young horses Frequently, in protected blue grass mountain valleys, they thrive the year round on pasture alone. A visit to the foal pasture every few days may be the means of early discovering sickness mals should be noticed on such visits. and if the hoofs are too long or high on one side they should be trimmed properly. A failure to keep the feet leve!

A LIGHT STALLION.

may result in cracked hoofs or crooked joints. Barbed wire should not be used for fencing the pasture. Smooth woven wire is best. If a colt should be cut, disinfect the wound, and if it is a very large one have it sewed up. The wound should be dusted frequently with boric acid or air slaked lime un til healed and then greased with vase line so the hair will grow properly The animals should have plenty of fresh water and salt, and in hot weath er they require shade.

During the second winter the feed and management should be nearly the same as for the first winter, except that the quantity of feed should be increased somewhat, the colt tied up in his stall and handled frequently. Ed ucation by gentle and careful but firm handling at this age will save later much strenuous labor. In this connect tion farmers' bulletin 607, "Breaking and Training Colts." should be con sulted.

The succeeding years are largely repetition of those already discussed so far as feed and management are concerned, although the quantity o feed must be gradually increased as the animal grows. The prime general essentials for the proper development of horses from the yearling stage until they are put to work are: Fresh air pure water, plenty of exercise, nutri tious, palatable feed in sufficient quan tity and shelter from severe weather.

GRAZING THE WOOD LOT.

Stock Trample the Ground Hard and Eat the Seedlings.

Unrestricted grazing in the wood lot is a losing proposition, says the Nev York College of Agriculture. The farm wood lot cannot serve profitably for the production of timber and also as a pas ture for stock. Either all grazing should be stopped and the area given over exclusively to the growth and re production of trees or else the trees should be cut and the land used for the production of grass. Nearly all the wood lots of New York state are impor tant enough to make worth while their exclusive use for the production of timber and cordwood. A wood lot properly protected from injury and care fully managed can be made a valuable asset to the farm. Not the least of the dangers to the wood lot is that due to excessive grazing.

When allowed to run for any length of time in a wood lot stock so trample the ground that it becomes hard and impenetrable. The natural mulch of leaves is either eaten off or ground into the soil, resulting in excess evaporation and rapid drying of soil about the tree roots. Often the surface roots are injured, and any tendency which the air may have to circulate in the upper layers of the soil is stopped. The tree seeds as well as those of the grasses find the ground hard and dry, where germination is difficult if not impossible. Those few seedlings which secure a root hold and grow prove a tender morsel for the stock or are trampled underfoot.

The farmer who tries to economize by grazing his wood lot will soon find that be is burning the candle at both ends. The more mature trees are severely handicapped, and the reproduc tion is destroyed. For the use of a poor, unsatisfactory pasture he is crippling the growth of his timber and los ing all chances of a natural second

Moiasses Not a Hog Feed. We have fed molasses in an experi ment recently, and it did not prove to be a successful hog feed. It contains a very low percentage of protein, only a little above 1 per cent. The carbohydrate content is a little less than 60 per cent, and it contains practically no fat. It is more successfully used in connection with feeding cattle and horses than in feeding hogs. I would not advise it to be used for this pur

SALT MADE HERE LONG AGO

First Works Were in Operation in Virginia Before 1620 and in New England Few Years Later.

The United States has many sources of salt and does not need to look abroad for its supply. The industry had its beginning very soon after the early settlement of the country. In Virginia there were crude salt works in operation before 1620, and four years later the first attempt to manufacture salt in New England was made

at Cape Ann. Much salt was made from boiling sea water during the Revolutionary war period, and afterward an extensive system of solar evaporation sprang up system of solar evaporation sprang up around Cape Cod. The sea water was pumped by windmills into long lines and final, and their separation is beyond of vats which were provided with mov-able roofs and uncovered in dry weather In 1830 the production by weather. In 1830 the production by this method was 600,000 bushels of salt, about half of which was made in Barnstable county, Massachusetts.

By 1834 a reduction in the tariff and the cheap supplies of foreign salt, including that from the rich brines of Onondaga county, New York, rendered manufacture in Massachusetts unprofessions. manufacture in Massachusetts unprofitable. In Cape May county, New Jeritable. In Cape May county, New Jerty, once in each of four successive sey, brine was formed by allowing the weeks before the first day of October, sea water to flow into large holes in the sand of flats; when it had become concentrated by natural evaporation a barrel of it boiled in kettles yielded a bushel of salt. The salt industry the proper was started in Florida in 1840. proper was started in Florida in 1840, and in California, along San Francisco as prayed. bay, about 1843.

The Meatless Meal.

Many hard working men cloud up and begin to thunder at the mere sug- aug 31-5t gestion of a meatless meal. Brawn and meat are inseparable terms, they argue, and they would make you believe a single meatless meal would incapacitate them for life. As a matter of fact, it is all a question of having them leave the table feeling satisfied. If a man "feels full" when he folds his napkin, if any, he forgets in providing a heavier dessert than comno meat tell him to just wait. Then feed him some bread pudding, with a caramel or some other equally filling sauce. If he still kicks, give him some more. Then he can't kick.

COMMUNITY EXHIBIT TO REPLACE MARYLAND WEEK

Agricultural Society bas decided not to hold the regular annual meetings of the Associations in Baltimore, but to postpone the holding of Maryland Week Exhibit for one year, because of war conditions in general and particularly because of the impossibility of obtaining the Fifth Regiment Armory. In view of this fact it was felt that a special effort should be made to keep alive the splendid spirit of community effort and rivalry shown in the past in the general exhibits and club exhibit contests.

In order to further the work there has been appropriated \$100.00 for each county as prize money for agricultural products displayed in competition at community shows. Thus Frederick County is entitled to \$100.00 for prizes. The money is to be divided upon the recommendation of the county agent, P. A. Hauver in cooperation with the local authorities among the community shows as follows: \$50.00 will be allotted items in the list of articles in the community Exhibit List; \$25.00 will be allotted for prizes in boys'and girls' club work; \$25.00 will be allotted as special prizes for the particular phase of agriculture which is the special feature of the county.

If two such exhibits are held in the county each will get one half the amount; if four are held each will get one fourth the amount.

All organizations or communities expecting to hold community shows and to participate in this prize money should notify the county agent in writing as early as possible.

There are 176 articles included in the community list, a copy which can be secured by applying to the county agent, P. A. Hauver, Frederick, Md.

It is especially desired to make these exhibits as educational as possible. The extension service of the Maryland State College and the Agricultural Society will lend all possible assistance by aiding in judging and conducting demon-

Now is the time for the people of Emmitsburg to decide to get together for holding such an exhibit. It will help your people and advance the agriculture of your section. You should not look to the monetary value alone, but the educational value. It is the educational feature of the show that makes

Already several communities in the county have signified their intention of holding a community exhibit. Why not hold this in connection with a Farmer's Institute right here in Emmitsburg?

THE SIGNAL CORPS.

As announced in a previous issue the This Branch of the Service Is the Nerves of the Army.

An army must have eyes and ears as well as muscles and legs. It has a brain to direct its members in accord with the things the eyes and ears bring to the attention of the general in command. But it must also have nerves to carry the messages of the eyes and ears to the commanding brain.

The eyes and ears of an army are its scouts, its cavalry, its aeroplanes, its balloons, its spies, its photographers, its observers. The brain is the commanding general and his staff. The nerves are a hundred different activities of that branch of the service known as the signal corps.

It is the duty of the signal corps to transmit information. It performs this duty in many ways, ranging from the courier to wireless, from rockets at night to heliograph flashes by day, from permanent telephone and telegraph lines to the curious "buzzer" and its wire on the ground, on fence tops, strung among trees, anywhere it can be put. It uses the wigwag code with flags, searchlight signals, telephones, signal flares-any and all means of communication which the ingenuity of man has devised are employed by the signal corps as necessity may dictate.—Brigadier General Squier in American Boy.

NEW YORK'S DIRECTORY.

In Early Editions They Turned a Poet Loose Upon the Job.

The first New York city directory was printed in 1786 and was a scanty affair, with the "Van" descendants of the Dutch settlers of New Amsterdam taking up pretty nearly all the space.

The first attempt to compile names of New Yorkers by business or trade was made in 1805, when a classified list was appended to the directory. At the top of each classification the publishers inserted the work of a poet whose lyre was turned to commerce This, for instance, is the bard's thoughts on hairdressers:

Ye ragged pates, your hair we'll crop And dress it vastly pretty, Or if your blocks are bare walk in, I warrant we can fit ye,

With bag or queue or long pig tail
Or brushed wig or grizzled—

It was pointed out that the poet evidently had no trouble finding inspiration for each of the different businesses he was called upon to sing about until he came to the list of restaurants, which was published without verse, leading to the belief that the strain of singing of food had been too much for the bard.-New York Times.

Sea Water.

Sea water is a complicated mixture of a great variety of substances. Roughly speaking, it consists of 961/2 per cent of fresh water plus 31/2 per cent of mineral salts. Three-fourths of these salts is chloride of sodium, or common table salt, and the next largest constituent is chloride of magnesium. After these come sulphate of magnesium, sulphate of lime, sulphate of potash, bromide of magnesium and carbonate of lime. In addition to these substances, sea water contains minute committees, left Monday morning to be quantities of quite a variety of eleand arsenic. It also contains some silzine nickel cobalt, iron and gold. Copper and zinc are found in some seaweeds, and certain species

Curved Arms of Flywheels. A great many people imagine that curved for the sake of beauty and graceful appearance. But this is not so. In the making of these wheels they by the sudden outburst of flames in the are cast in sand from molten iron poured in. As the arms are of less the scene from everywhere. Buckets thickness and body than the heavy rim were obtained and the fire was fought and the hub, they begin to cool off quicker. By the time the arms are "set" the rim and hub are still cooling and contracting, and the effect of their shrinkage is to cause a very powerful pull on the arms. As the latter are solidly set they become severely strained, but if the arms are curved they withstand the pull that goes on during shrinkage and simply straighten out a

The Beginning of Brazil. Rising brisk and early one bright morning toward the close of the fifteenth century, a nice Portuguese gentleman, to wit, Cabral, going for a sail, decided to take his comical little fleet down the west coast of Africa, turn to the east, platinum to cater to the ostentatious totter across the Indian ocean and, before he grew quite old, reach the Indies. who want to shine with brooches, pins The opening voyage was shorter than and settings of the highest cost and expected. The Safeguard

By PETER G. TISDALE I was dining with my friend Ed-

ward J. Emerson and his wife when the news came that the Chinese people were vibrating between a monarchy and a republic. Emerson was a clergyman and had done ten years' missionary work among the Celestials. I asked him if in his opinion the Chinese were fitted for a free government.

"No people," he replied, "are fitted for a free government except those who have reached a high degree of intelligence. There are a few Chinese who are up to the standard of our western civilization, but there are millions of them who are sunk in the most abject superstition. When I first went to China I had a good deal to learn about the people there. I was soon initiated. Do you see that paper?

He pointed to a scrap of paper about 8 by 10 inches in size hanging on the wall. On it were written Chinese char-

"That paper," he continued, "accounts for my being here at this moment. Without it I would not have been here. Soon after entering upon my work in China I fell in with a very intelligent mandarin who seemed to take a liking to me. I believed that if I could make a Christian of him he would influence others, and I set about the work of his conversion. He appeared to be very much interested in what I said to him, but I could not bring him to the point of declaring himself a Christian. I believed, however, that it was because by doing so he would bring down upon himself the anathemas of his people

"One day he called a halt on our conversations. Something was in the wind, but I could not tell what it was. In bidding adieu to me he handed me that slip of paper you see hanging on the wall, telling me that if I got into trouble with his people to produce it and it would protect me from harm. Being new to the country, I did not understand what was written on it. I folded it and put it in my pocket.

"It was not long after this that the Chinese common people gave vent to their hatred of the foreign devils in one of those massacres which from time to time have occurred in that benighted land. One morning I was horrified by one of my converts telling me with fear and trembling that in a distant village the heathen had killed all the foreigners and hundreds of converts.

"That day all the converts at the station went away, I knew not where, but I perceived they were hiding from the wrath to come, for it was not likely that the massacre of which we had heard would be the last of the move-

"Mrs. Emerson and I had been married only just previous to our departure from America, and none of our little ones had then come to us. The question was whether we should remain where we were or go elsewhere. We decided that we were as safe where we were as in any other location. station might not be attacked, while another to which we would flee might fiends, so we concluded to remain

"Every day, at last every hour, we heard of massacres nearer and nearer to us. But when the storm came it broke all at once. One morning I heard a distant din, and very soon a howling mob came down the street.

"The mind is a queer working bodily implement, and since what it did for me on that eventful morning I have felt sure that there is a lot about it that we don't understand. I had put the paper the mandarin had given me in a tin box where I kept other docu-Marie Willis (at the beach)—Kit is ments and had forgotten all about it. guite a clever social general. Suddenly as I heard those yells and Suddenly as I heard those yells and shrieks it popped into my head. I remembered its donor had told me that if I got into trouble with his people to produce it.

> "I went to the tin box that contained it, took it out and unfolded it. You see that it is large enough to be read from some distance. The point with me was how to enable the mob to see it and what it was before they murdered me. We were on the lower floor. My wife was as white as a sheet, and I confess was no more self possessed. My hands trembled so that I could scarcely hold the paper. I ran to the window and placed it on a pane, the writing out toward the street.

"There I, stood while the bloodcurdling yells came nearer and nearer. My wife, woman-like, ran to the door and locked it. No protection was thus afforded, for one kick would have broken it open.

"Presently I saw the scattered advance of the mob coming like white clouds shooting up in the sky before a hurricane. Then came a man bespattered with the blood of his fellow men, and he made straight for the mission. I saw by the expression of his face that he knew it was the residence of the hated missionary. He was instantly joined by others, all making for the door. One turned the knob, but while doing so saw the paper I was holding against the window. He stopped short and pointed to the paper. All read it, paused and passed on. Others came and wondered why the station had not been destroyed till they saw the paper.

"I held it thus for half an ho dreading lest some fiend should m us before seeing it. When t' man had gone by I called to to bring me some paste ap the pane."

"What' was the wr' per?" I asked. He Respect this mar

FREDERICK COUNTY.

Frederick is next to the largest of the counties of Maryland. In population and wealth it ranks next to Baltimore county. In the fertility and productiveness of its lands it ranks among the first in the Union, and especially in the produc-tion of wheat. The area of this great county is 633 square miles. The great body of the people are of German, English and Scotch-Irish descent, the progeny mostly of the early settlers. The land is mostly of fine limestone quality, and the greater part of the county is a valley of rolling lands lying between the Linganore Hills and the Catoctin Mountain. This splendid valley is drained by the Monocacy river, and is one of the best farmed and most highly improved and productive areas of the Union. The great crops are wheat and corn.—Maryland Manual issued by Bornal Manual issued by Board of Public Works.

EMMITSBURG.

In all Western Maryland-the beauty spot and the garden spot of the State-there is no town more attractive than Emmitsburg.

No people are more wide-awake, more knowable, more courteous to strangers than Emmitsburgians.

The location of Emmitsburg is ideal; the surrounding scenery is unmatchable: the climate is notedly healthful; its water—pure mountain spring water-cannot be surpassed. It is within easy access of Baltimore, Hagerstown, Frederick; eight miles from the National Battlefield at Gettysburg, near to the Mountain Resorts, and is surrounded by fertile farms and productive orchards.

Mount Saint Mary's College and Ecclesiastical Seminary-with an enviable reputation extending over 108 years—is located here; St. Joseph's - College and Academy for young ladies-equally as noted during its 107 years of splendid acheive-

ment-is also here. There are excellent Schools-Public and Parochial-in Emmitsburg; two sound Banks, five Churches, a live Newspaper, modern Hotel accommodations, adequate Fire Department, progressive merchants, splendid physicians, good liveries, auto garages, many fraternal organizations, good railroad accommodations. There are four or five mails a day, telegraph, express and telephone service connecting all points; electric light and power, oiled

There is business to be had in Emmitsburg; there are Factory Sites availabe. If you contemplate changing your place of residence -- come to Emmitsburg, Frederick County,

No Scholarships During War.

United States and Canada have been of time, as the fertile plains of Sicily indefinitely postponed because of the testify. war. The thirty-two successful candidates for the scholarships for this year who were to have begun their studies at Oxford University Oct. 10 as represeptatives of the United States already trailing nurses with their pati- have joined the Army or Navy.

Quite So.

A Washington clubman finds a certain fellow member irritatingly optimistic at times. With this chap every disagreeable thing has its compensations, a principle he never fails to give expression to whenever opportunity offers itself.

"How are you this morning?" asked ed his friend in the breakfast room. "I had a miserable night," said the other. "I never suffered so in my

The optimist reflected. "Hum! That's bad! But," he added, brightening up, 'you must remember that a bad night is better than no night at all!"

Voice of the Tiger. The tiger may be "shod with silence," but he has a voice that is terrifying. It is said the voice of the tiger, a wonderful thing in its way, is not only the most mournful, but the most terrifying of jungle sounds, and that it is a power ful aid to him in his hunting. The natives believe the deer, hearing the tiger's voice and unable from the reverberating nature of the sound to locate the position of the enemy, stands probably some truth in this; for unless one is following the tiger and has seen him it almost is impossible from the sound alone to tell with any certainty where he is.

Daily Motion of the Earth.

Astronomers are not agreed as to the cause of the earth's daily motion and how the force of that motion is kept up. Some of them claim that the "original initial centrifugal force" was directed in a line slightly to one side of the center of the globe, which would, of course, cause the earth to rotate upon its axis, and by the law of inertia of matter must continue to revolve at a uniform rate of speed. This "law of the inertia of matter" is to the effect that matter once set in motion must continue to move until arrested by some outside force. Others claim that the motion is a "compound resultant of the motion of the earth in its orbit and the attraction of the sun.'

Oldest Candy In World Is Licorice. Most of the black licorice comes from Spain, where it is made from the juice of the plant and mixed with starch to prevent it from melting in hot weather. The licorice plant is a shrub about three feet high and grows wild where its roots can reach the water. It grows largely on the banks lina.

of the Tigris and Euphrates rivers. As the valley of the Euphrates con tained one of the earliest civilization in the world, it is probable that lico rice is about the oldest confection in the world and that the taste which mediator. boys and girls like so well today wa enjoyed by the boys and girls of Baby lon and Nineveh 3,000 years ago.-Nev York Mail.

The Finest English Odes.

Among the many fine odes in the English language Macaulay character ized Dryden's "Alexander's Feast" as the noblest, and Dr. Richard Garnett agreed with him in thinking it the finest ode we have. The full title is "Alexander's Feast; or, the Power of Ausic-An Ode For St. Cecilia's Day Spenser's "Epithalamium," Milton's "Ode on the Nativity," Keats' odes "To a Nightingale" and "On" a Grecian Urn" and Shelley's "To a Skylark" are notable instances of this class of poem and to these must be added, though their form is irregular, Wordsworth' magnificent "Intimations of Immortal ity" and Tennyson's "Ode on the Death of the Duke of Wellington."

The Sea Horse.

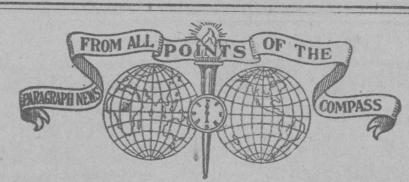

This fish is found in the Atlantic ocean' around the coast of Spain, the south of France, in the Mediterranear and in the Indian ocean. Sea horses are very small and have been found often curled up in oyster shells. The head is much like that of a horse, and the rings around the body and tail resemble those of some caterpillars. The habits of these fishes are singular and interesting. They swim with a waying motion and frequently wind their tails around the weeds and rushes They have fins to sustain them in the water and even in the air. They live on worms, fishes, eggs and substances found in the bottom of the sea.

eleventh centuries. At that time the plies. Persians in a great contest, Iran versus Turan, found their match in the Turks, greatly to the disgust of King Afrasiab. The Byzantine poet Nizami sang of polo in the twelfth century. Then bar patronized it. In Japan the game popular under the name of da-kin.

THIS NEWSPAPER?

SNAKES IN CAGES.

"Of course," began Daddy, "the time when the snakes enjoy changing their skins the most is in the spring, for spring suits, or spring skins, mean as much to the snakes as they do to people.

"And when the snakes are wild—or when they live off in the woods, and are by themselves, they have been New Location 18 E. BALTIMORE ST. asleep all winter long, and when spring comes it is time for their first meal and their new skin. Sometimes they change from time to time in the summer months, but the spring is the time of the year for them.

"Now in the zoo it is quite different. There the snakes do not go to sleep all winter because it is warm all the time, and they never know it is winter.

"In fact, they think it is summer weather all the time! And they do not eat enough ahead to make them feel

Made Him Very Angry.

like sleeping for so long. Of course they sleep a great deal but not the winter through.

"And the snakes in the zoo change they have got the best Teas, Coffees, Canned Goods, etc., pro of the year is not the big time for of the year is not the big time for their new skins as it is for the snakes who live away from the zoo.

"Perhaps it is because they do not have the chance for many adventures that they change their skins so often. They have so little else to do in the zoo besides eat and sleep and think of new clothes.

"Now some of the very large ones. like to have new skins every month! They are very fussy. And in the zoo the snakes are fed twice a week. They do not eat so much at a time, but eat

"But the very large ones do not get fed twice a week-they eat so much and such heavy meals that they get fed about every three weeks. Their favorite meals are of pig meat.

"But it is the same way in the zoo as it is outside-when they are changing their skins a blue scale comes over each eye and most of them are quite blind-others can see just a little bit. But none of them can see well, and so we generally say that the snakes are blind when they are changing their

"Mr. Milk Snake was lying in a pan of water in his cage.

"This will help me shed my skin; it comes off so much more easily then. It loosens it and I can begin to pull it off with my nose.'

"Now the milk snakes like to eat smaller garter snakes for their meals. For different snakes like different food, just as people do not all like the same kinds of meals.

"In one cage there was a snake who was feeling very poorly. Some person when passing his cage had tapped on the glass and had made him very angry. He had banged the glass with his nose. There had been a sign up asking people not to tap on the glass, but some of them thought it was funny to see the snakes get angry and

bang the glass.
"When they do that they always hurt their noses, and the keepers have great deal of trouble in making them vell. They suffer so much then, and they cannot pull off their own skins and have to be helped by the keepers. For it is with their noses they always. begin pulling at the skin under their lips, and if their noses are hurt they cannot do anything.

"That is something that never hap-pens except when the snakes are in the 200-as outside there are no panes of glass for people to pound. And perhaps outside they leave snakes alone altogether. That is why the keepers think it is so unfair of people to try to annoy them inside. And if they don't know how much damage they do, they should just hear of the snakes who get sick through that alone.

"But Mr. Milk Snake was lying in the pan of water and he was just about ready to get off his skin. He began to pull under his lip, using his nose to start the skin coming off.

"And when the keeper came to feed Mr. Milk Snake, his blue scales had fallen from his eyes, his old skin was lying in the corner of the cage and he was feeling as fine as could be in a new skin.

done,' said the keeper; 'it is when the poor snakes have trouble owing to the lookers-on that it makes me mad."

Peaches may be used in various combinations for desserts, the following is one worth bearing

SOME FRUIT DISHES.

in mind: Peach Trifle.—Scald a pound of peaches, drain, remove the skins and stones. Prepare a sirup of sugar and water and when boiling hot drop in the peaches and cook

until soft, then rub them through a sieve. Pour the sirup into a sponge cake and when well-soaked add the pulp carefully. Whip a pint of cream, add two tablespoonfuls of sugar, a teaspoonful of almond extract and pile lightly on top of the cake just before sending to the table.

Fresh fruit may be used for this dessert, not cooking the fruit but stir; ring the sugar into the pulp after putting it through a sieve.

Apricot Tapioca Pudding.—Cover one and a half cupfuls of tapioca with cold water and soak three hours, then cook in three cupfuls of boiling water, add a half teaspoonful of salt and a cupful of sugar, cook in a double boiler until transparent.

Peel and stone twelve apricots and put them in the bottom of a buttered dish, pour over the tapioca mixture and bake in a moderate oven for twenty minutes. Serve hot or cold with cream and sugar.

Gooseberry Chutney.-Wash, stem and top six cupfuls of gooseberries, add one chopped onion and two cupfuls of raisins, put all through a food chopper. Add one and a half cupfuls of brown sugar to the chopped mixture, two tablespoonfuls of powdered ginger, one tablespoonful of cinnamon, three tablespoonfuls of mustard, two tablespoonfuls of salt, one-fourth of a teaspoonful of red pepper and paprika mixed, one teaspoonful of tumeric powder and a quart of cider vinegar. Bring gently to the boiling point and simmer for an hour. It may be bottled unstrained or if strained may be used as a relish or catsup.

Peaches are delicious baked. Add a little water and sugar with some lemon juice, add small bits of butter and baste often while baking in a porce-

ENGLISH SPARROW

Passer domesticus

Length, about six and one-fourth inches. Its incessant chattering, quarrelsome disposition, and abundance and familiarity about human habitations distinguish it from our native

sparrows. Range: Resident throughout the United States and southern Canada.

Habits and economic status: Almost universally condemned since its introduction into the United States, the English sparrow has not only held its own, but has ever increased in numbers and extended its range in spite of all opposition. Its habit of driving out or even killing more beneficial species and the defiling of buildings by its droppings and by its own unsightly structures, are serious objections to this sparrow. Moreover, n rural districts, it is destructive to grain, peas, beans, and other vegetables. On the other hand, the bird feeds to some extent on a large number of insect pests, and this fact points to the need of a new investigation of the present economic status of the species, especially as it promises to be of service in holding in check the newly introduced alfalfa weevil, which threatens the alfalfa industry in Utah and neighboring states. In cities most of the food of the English sparrow is waste material secured from the

Find Charcoal Outlasts Iron.

Charcoal crumbling and breaking between the fingers does not appear to be the most durable and indestructible thing in creation, yet next to the diamond it is. The precious stone, as is well known, depreciates in size so slowly that hundreds of years produce no noticeable change in it. Charcoal never decays; it can sleep in the ground or in the air and be as large at the end of a century as before. It can lie in the bed of a stream and permit the water to flow over it every day, every hour, every minute for years and years and be the same. And outside of the diamond it is the only substance that will do so.

to Hanover on Thursday.

Thursday afternoon in Hanover.

Mr. Cecil Rotering returned Saturday from a short visit in New York.

Messrs. Foxhall P. Keene, and W. J. Rowan, of New York City, spent a few days in Emmitsburg en route to White Sulphur Springs, Va.

Frederick City Hospital Progressing Rapidly.

Just fifteen years ago the Frederick City Hospital was instituted. The first few years of the hospital's existence were attended by many trials and tribulations, in spite of the loyal support of its sponsors A total of only sixty patients were cared for, but the value of the hospital had begun to be apparent, and in recognition of this fact the first WOMAN'S AUXILIARY OF THE installment of the State appropriation, \$3,500 was made.

ening record of 60 patients the first tended. year is obvious.

Delightful Dance at Fairfield.

The hospitable home of Mr. and 'Mrs. George Kebil, of Fairfied, Pa, was the scene of a charming dance on Monday evening. The evening's entertainment was in honor of Mr. Paul Kebil's birthday. Dancing was indulged in until a late hour and a buffet luncheon was served between the dances. A party of Emmitsburgians were among the more than fifty guest present.

Registration Day on October 2.

Tuesday, October 2. Tuesday, October chased to make four knitted outfits. 9, will be the last registration day. One week from the latter date will be revision day.

Change Of Day.

Beginning next Tuesday, the 25th, and until further notice, the regular meetings of the Women's Auxiliary will be held every Tuesday evening at 7.30.

Second-hand Ford cars-roadsters and touring cars—for sale at the the original settlement, Tremountain, Peoples' Garage.

SPECIAL NOTICE.

¶ All communications for this paper and all letters of a business nature should be addressed to THE WEEKLY CHRONICLE and not to individuals in the office.

¶ Strict observance of this rule will obviate mistakes, delays and misunderstandings. july 13-tf.

THE FORUM

"Between the points of difference usually lies the truth, and open discussion never harms it."

[The Editor would have it understood that he is not responsible for the views expressed in communications addressed to him and published in The Chronicle.]

¶ No attention will be paid to anonymous communications.

MY DEAR EDITOR:

The Chronicle; its mission on earth is to smooth away the wrinkles from the "furrowed brow of care" and to fill its coffers with gold. That being the case here I am with my contribution. Your expectations are realized and mine are more than realized by the many nice things that you have to say in the Weekly Chronicle.

I believe that in every home where your paper is read the children's laughter is unrestrained and the blest sunlight is not shut out for fear of fading 6:45 p. m. the front room carpet.

Your editorials are peaches of the Alberta kind, just tart enough to make the reader set up and take notice; you surely are a chronicler of the news up to date; you are mild but at the same time persuasive in your expressions and what more? Too many for me to say just now and furthermore they might cause your modesty to blush. I am so sorry I have not been permitted to visit dear old Emmitsburg this 1917 but let us hopefully hope that next year it shall be our pleasure to do so.

In the meanwhile my dear Galt, let us keep a stiff upper lip, by so doing I am satisfied the trenches will be ours. You have, as well as my friends of the Burg my best wishes for-health-hap piness and prosperity.

Yours Hopefully, A Former Emmitsburgian.

PREPARING THE BEES FOR WINTER

College Park, Sept. 13.—Successful wintering should bring the colonies into spring crowded with young vigorous workers ready for the early nectar flows; yet with sufficient stores remaining in the hives to carry them . if necessary well into the season. • These conditions can only be obtained when the colonies are properly cared for in the fall.

It will not be necessary for the bee- | keeper to even visit his yard until the | * next season is well advanced if the bees are well supplied with food, room, and protection this fall. It is argued that if food be sufficient and the colony be headed by a young queen and sheltered from the wind extra protection is not necessary. This is not true. One does not have to be a careful investigator to prove the necessity for added protection.

Bees cluster in winter for mutual warmth. The lower the outside temperature gets the more food the bees consume and the greater the muscular activity within this cluster. This maintains a temperature sufficient to keep the cluster warm. Six months of cold weather demanding such excessive activity and food consumption leaves the bees so weak in the spring and so affected with dysentery from faecal matter that while they may at first seem strong they die faster than brood is reared to replace them. Thus the colonies become too weakened to take advantage of our early nectar flows.

If the bees are protected from the cold by packing these conditions are relieved and the colonies will come into the spring strong and healthy. provided they were well supplied with

food and bees in the fall. Colonies may be packed in groups of four, a pair facing east and a pair west, or they may be packed singly. They should be set on two by four boards, edge up, on a platform raised slightly from the ground, and surrounded with a tight packing case large enough to leave a six-inch space all around the colonies and on top. This space may then be filled with sawdust, leaves, chaff, or pine needles. A boar tunnel may be constructed from the hive entrances to the case and four half-inch holes bored through the latter into the tunnels thus allowing air to reach the colonies and providing for flights in early spring. A tight cover over all completes the snug nest, which if sheltered from the winds will bring the colonies into spring very strong and vigorous.

The packing should be done in early fall and left until May of the of the fertilizer has thus been returned not come out even, and there is likely following season. If the bees are in in increased crop yields at present mardouble bodies with the upper one fill- ket prices. ed with honey the results will be still more satisfactory as the colonies will have plenty of room in the spring to rear brood and plenty of food to build up sufficiently for the early honey

Few beekeepers at present pack their bees. They argue very persistently against it; but the majority of us are from Missouri and a fair trial will convince the open minded that winter protection and shelter are as essential to honey production as brood and bees.

BALANCE THE "PACKING."

College Park, Sept. 13.—"Balance the 'packing' is the admonition which Poultryman Roy H. Waite, of the Agricultural Experiment Station, is sending out to poultry raisers over the State, dealing with the proper mixing | of concentrated foods and roughages for poultry of all classes. A part of this appears herewith:

"Hens have to have a certain amount of 'packing' in their digestive organs if they are to feel comfortable. Under natural conditions birds (hens are birds) pick up all sorts of coarse material. Their digestive system is arranged to handle this kind of stuff. Hens eat grass, weed leaves, big coarse bugs, juicy fruit. They will even eat corn leaves, clover and sand, and when hard pressed for roughage or filler will even eat leaves from trees, paper or almost anything that will give them

the comfortable feeling of fullness. "There are two extremes to which you can go in feeding poultry. You can let the hens live entirely on this roughage or you can keep them on a diet of nothing but concentrated feeds. From the standpoint of the poultryman | to the pigs' comfort, and a layer of oil one extreme is as bad as the other. Both reach the same end. Only they travel in a different direction. They meet around the turn. Neither method will produce a profit. One because the rough material will not furnish enough excess nourishment to make eggs, the other because so much expensive feed has been used in producing eggs that the cost of producing is about equal to the selling price. From the standpoint of the public welfare, however, overfeeding of concentrated feeds is much the worst offense at the present time because there is a shortage of this kind of material. In your feeding of poultry try to strike a happy medium. Don't make your hens fill up on concentrated feeds. Give them a chance to eat all the green material they want. There is no use in poisoning their systems with an excessive amount of nourishment. It isn't good for the hens, isn't good for your country and it isn't good for your pocket-

Eggs are high,-but so is feed. The careful feeding of high priced feeds should bring not only a profit, but a feeling of having done another "bit" along the lines of conservation.

THE STOCKMAN

Young pigs should not run in ♦ heavy pastures when the dew is on the grass.

Hoofs of colts should be trimmed in case they become crooked or larger on one side than on the other. If they are neglected the @ hoof may crack, and lameness & will result.

One way of making the lambs @ better than the ewes is to have a @ good buck. Secure him early @ and keep him until the breeding @ season comes on. The proof of a sire, whether he

is a stallion, bull, boar or buck, @ is in his get

The lambs should have a bit @ more grain now if they are to be @ marketed this fall.

There is every reason to believe that the present level of prices & for live stock will continue for @

TO BALANCE MANURE.

Phosphorus Added to Barnyard Product

Increases Crop Yields. Since barnyard manure is lacking in phosphorus, some carrier of this element must be added to make it a balanced plant food. Crop yields are materially increased by this combination.

Manure contains about ten pounds each of nitrogen and potassium and only about two pounds of phosphorus per ton. The phosphorus content is low because the element is used by animals to make bone and milk. Commercial fertilizers, on the other hand, generally contain much more phosphorus than either nitrogen or potassium. Crops, as a rule, need phosphorus in largest amount; hence some phosphatic carrier like acid phosphate or raw phosphate rock is added to manure to give the crops a balanced ration.

Wheat yields for eighteen years have risen from 21.4 bushels per acre from manure alone to 26.8 bushels from ma nure and acid phosphate in a three year rotation of corn, wheat and clover at the Ohio agricultural experiment station. Eight tons of manure is applied to corn preceding wheat. Acid phosphate is used at the rate of forty pounds to a ton of manure.

The 320 pounds of acid phosphate

FEEDING BEEF CALVES.

Young Animals Should Not Be Allowed when by the double cooking they could to Lose Calf Fat.

The outstanding principle and the cattle is to keep the young calves growing and in a thrifty condition from time of birth until they are ready for

show easy feeding and fattening qualof all they eat,

The natural feed for the young call is, of course, milk, and the development of its digestive tract is rather slow, so that it is able to consume but ittle roughage before it is six months of age. However, he will eat considerable grain with advantage at a mucl arlier age.

If you expect the calf to do best you annot afford to allow it to lose its alf fat at weaning time. Most catlemen' will tell you that calves which ave been in good, thrifty condition since birth are the best profit makers and the calf that has had a good dam and has had the opportunity to nurse until he is six months of age will have n advantage. The calf will need to have grain in order to keep it from losing its calf fat .- W. L. Blizzard, Department of Animal Husbandry, Oklanoma Agricultural College.

Pigs on Pasture.

Pigs on pasture usually get enough exercise. They should have a clean. dry, well ventilated shelter to guard against exposure to storms and to supply shade. A concrete wallow will add on the water will keep down lice. Clean bedding also helps to keep away lice. as will an oiled sack on a rubbing post or sprinkling the pigs with crude oil every two weeks.

To supply mineral matter and a tonic the following mineral mixture is good It always should be accessible. Dissolve the copperas in hot water and sprinkle over the mixture: Copperas. wo pounds; slaked lime, four pounds wood ashes, one bushel; sulphur, four pounds; salt, eight pounds; fine char coal, one bushel.

wheat the better. The longer the plow- A stunning hat for service ing is delayed the smaller the yield. ays the Kansas Farmer. The loss is about one bushel per acre for every die of July is twenty-two and one-half | contents brought to a boil before it is bushels per acre, while the average for set aside. the land prepared in September is only fifteen bushels. If the land cannot be plowed the next best thing is to disk ture from the earth.

THRIFT SLOGANS

How to Save Foods, Labor and Gas by Planning.

DOUBLE PORTIONS THE IDEA

An Expert Tells Us How to Conserve Odd Ends Instead of Enriching the Garbage Pail with Leftovers-A Role For the "Tail End" of Steaks.

In these days when "thrift" is the housewives' national slogan it is well to consider methods which will enable the last fragments to be utilized.

In many homes a leftover is an accident, but the better way is to make a "planned over" which shall be put to really wider use. For instance, when buying a steak with a tail end have this end chopped by the butcher. But do not stop there. Buy at the same time enough chuck or lower round steak to make enough of the meat so that when all chopped together there will be enough for a second meal two days later, whereas the small tail alone would not have been enough.

In cooking rice for luncheon cook enough more so that there will be sufficient for rice cakes for breakfast, not merely a small saucerful with which hardly anything can be done. Similarly with many other foods, which by cooking about one-third more the first time will prove sufficient for a second meal, rather than have left such a small portion that it will likely be thrown out and considered not worth saving.

In cooking vegetables it is easy to cook at one time a double portion, to be divided into two days' use. For instance, carrots or spinach or asparagus can be cooked with one using of fuel, then used one day hot, one day cold. The water must be saved in which it was cooked. This, when combined with cream, will make a delicious cream soup for luncheon of the third day. It is in the water of the vegetables that the most valuable mineral salts are to be found, so that by saving them we are also saving food values.

In making pie crust make sufficient extra to have for tarts or small cheese crackers by adding old grated cheese to the paste before it is cooked. In prewould now cost about \$3.35, but it pro- paring any kind of cornstarch or tapi duced 5.4 bushels of wheat worth \$8.10 oca pudding make it in small molds at \$1.50 a bushel. The corn yield was instead of in a large one. The small also raised 9.2 bushels, now worth at molds will serve just one person, and least \$6.90. Clover was increased 887 there is likely to be little waste, where pounds, worth \$4.43. Six times the cost | if a large mold is used the portions will to be waste.

Everywhere that the "double cooking" can be given and fuel thus saved there is economy. Very many families cook separate meat, potatoes and vegetables over separate burners every day. not only save time, but fuel and material, if more were cooked at once and secret of success in the production of the remainder of the dish made a

"planned over" instead of a "left over." In cooking cereal there is always a little left over, which in many homes is thrown out or but on a saucer, expect-Cattle selected for the production of ing to be warmed, but which never is, beef should not only be of the best Why not, instead, cook more and then ities, or the tendency to make the best for lunch or next day's breakfast? Or enough can be saved to form the basis of griddelcakes, muffins and similar

If fish is used buy enough so that the second amount can be made into cakes or scalloped forms, etc. The bones and waste can be used in a soup, which, if well seasoned and strained and com bined with rice, will conserve the most nourishing values of the fish.

MILITARY MODEL.

Most Millinery For the Fall Copies the Army Caps.

Black satin covered, this turban makes its hit by line, the craze for fall hats being mostly for national shapes of the different armies. The scroll veil The earlier ground is plowed for does an amazing let of trimming too.

To Prevent Graining Often maple sirup and other sugar week the soil preparation is delayed sirups grain when left standing for The average wheat yield at the Kansas some time. This can be prevented, experiment station for the last six however, if a teaspoonful of cream of rears on ground prepared in the mid tartar is added to the sirup and the

Taking Out Stains. Camphorated oil will clean the marks This will help get the soil ready and made by hot dishes on the polished will kill the weeds that sap the mois- table. Rub grass stains with molasses and wash.
