

Revenue Service Offers Assistance

The Internal Revenue Service during the 1963 income tax filing season will again stress self-help as its basic theme of taxpayer assistance.

"The self-help program has now been in effect about seven years," Mr. Machiz said, "and we believe that more and more taxpayers are becoming familiar with the requirements for sound preparation of Federal income tax returns."

Essentially, self-help means that taxpayers complete as much of their returns as possible before asking help from us.

We are still going to provide help to those who actually need it and we shall again stress our telephone assistance program, which will enable taxpayers with one or two problems to call us for a quick answer designed to enable them to complete preparation of their returns.

The most important thing to the taxpayer in preparing a return or in seeking telephone or office assistance is to have all of his 1962 financial records at hand and to have the necessary facts in mind.

If you have a tax problem, call your local Internal Revenue office. In Baltimore the telephone number is 837-1040. In Washington, REpublic 7-8750. Ask for Tax Information Service.

Miss Gwendolyn Shorb, Washington, visited over the weekend with her parents, Mr. and Mrs. Clarence Shorb.

Miss Fances Ann Ott, Washington, spent the holidays with her mother, Mrs. William Ott and family.

Dinner guests on Sunday at the home of Mr. and Mrs. Donald Stoner, Emmitt Gardens, were Mr. and Mrs. Robert L. Topper, Mr. and Mrs. Allen Stoner and family and Mr. and Mrs. Thomas

Stoner, Waynesboro. The dinner was in honor of Miss Kathy Stoner, who celebrated her eighth birthday on Christmas Day.

Jerry Rightnour, Carnegie Institute of Technology, Pittsburgh, spent the holidays with his parents, Mr. and Mrs. Wales Rightnour.

Mr. and Mrs. George Arnold, and family and Mrs. Marie Rosenstein were guests of Mr. and Mrs. George Arnold, in Taneytown on Christmas Day.

Cakes, Candles, Commemorations Light March of Dimes 25th Year

Throughout the nation this month, candles will be lit on birthday cakes to symbolize the 25th anniversary of the March of Dimes.

The cakes will range from real ones of conventional size to monster, multi-tiered models as much as 12 feet in height and 10 feet in diameter—the approximate dimensions of the one to be erected in New York City's famed Times Square.

Many "parties" commemorating a quarter of a century of disease fighting will be held at special treatment centers for birth defects, arthritis and polio which March of Dimes contributions are financing today in more than 40 cities across the U.S.

In many instances, guests at these campaign "kickoffs" will include governors or their wives, mayors and outstanding authorities in health fields. Other guests will be Americans of all ages who received March of Dimes aid during and after polio epidemics and outbreaks.

Jimmy Boggess, 5, of Coy, Ark., the 1963 National March of Dimes Child, blows out candles on birthday cake symbolizing first 25 years of aid to the crippled by the health organization.

Child—who this year is Jimmy Boggess, 5, Coy, Ark.—with President Kennedy at the White House and with various Senators and Congressmen and other dignitaries as well as with personalities of the stage, screen and television.

Special events for the March of Dimes are staged in all the big cities, many lesser ones and in some small towns. These include March of Dimes bowling tournaments, with "roll-offs" to select a national man or woman champion, fashion shows, auctions, teleramas, Coffee Days, Tag Days and street sales, neighborhood bread sales, air-lifts and a long list of sports activities.

To raise the millions required every year for patient aid and research in birth defects, arthritis and polio, each March of Dimes campaign is carefully planned many months ahead. There are millions of contribution envelopes and coin collectors to be distributed around the nation; hundreds of thousands of posters to be erected in every hamlet, town and city; two million volunteers to be organized for the Mothers' March (the climax to the campaign at the end of January), and March of Dimes films to exhibit to explain the work of the voluntary health organization.

Arrangements must be completed for the visit in January of the National March of Dimes

The theme of this 25th Anniversary March of Dimes,

which is "Give for the Life of a Child," will be stressed in all these special events, and the story told of the first 25 years of that story are: Patients aided, 338,000; expended for the medical care program, \$385,500,000; for scientific research, \$73,600,000; and for professional education, \$38,000,000.

### 4 Maryland 4-H's Wear Laurels As Nat'l Winners of Scholarships

Four 20-year-old 4-H Club members from Maryland were national winners at the 1962 National 4-H Club Congress in Chicago. Selected by the Cooperative Extension Service, they were among the group introduced at the annual congress banquet attended by more than 2,000 delegates and leaders. The \$400 scholarship recipients, their award-winning projects, and the donors are: Anne Breidenbaugh, of Glen Arm, canning, Kerr Glass Manufacturing Corporation, Margaret Nicholson, of Detour, dairy, Oliver Corporation, Patricia Ann Beard, of Edgewater, leadership, the Sears-Roebuck Foundation, James Wightman, of Gaithersburg, swine, Moorman Mfg. Co.

## BABSON

Writes . . .

BY ROGER W. BABSON

Babson Discusses Labor Costs BABSON PARK, Mass., Jan. 3, 1963—No analysis of present conditions or prospects for the future should leave out the impact of labor costs on our manufacturing and services. Workers naturally think in terms of how much they are getting in today's pay envelope and how

much they will get in tomorrow's. They do not often give much attention to the fact that employers must think always of how to hold employment up, how to meet rising labor costs, how to keep their business healthy, how to ensure fair profits, how to keep prices down, or how to put aside funds for modernization and expansion. Perhaps only an employer can really appreciate these problems. Readers may ask: Just how much of an inroad have labor costs made? A recent survey indicates that total pay for time worked has soared 120% over the past 15 years. Far more spectacular is the fact that fringe benefits now cost management about 32.5% more than they did at the end of the Korean War. It is easy to see what overwhelming pressure this exerts on the price of American goods and services. Little wonder that cheap - labor foreign goods are underselling us along steadily broader fronts. Economists are justified in crying for a return to the law of supply and demand for labor rather than having to operate under the pay-price inflation that is so economically unrealistic. Workers Lost Out No sane observer wants to see the nation's workers deprived of their fair slice of the profits pie. But when wage and fringe costs become top-heavy, the workers lose their gains through sky - rocketing living costs, a cutdown in working hours, and unemployment. Too many union leaders, however, act as though profits should be used only to swell payrolls. They give little or no regard to the necessity of distributing reasonable segments of profits to owners, investors, researchers, distributors, planners of future plant expansion,—and most important of all, to the public in the form of lower prices all along the line. When employers balk against exaggerated wage demands, unions frequently resort to schemes of taking less in actual cash in return for new or extended fringes. But workers should realize that fringes are just as expensive for the company as are dollars placed in pay envelopes. Fringes may be out of sight of the employees; but they are very much in view when company expenditures are totaled. They are just as inflationary as outsized wage hikes, if somewhat more subtle. Government Guideline Ignored The President's Council, in a move designed to curb the pay-price upspiral, decided some time ago that it would be all right for unions to negotiate raises as long as they did not go beyond the roughly 3% annual productivity guideline. Instead, consistently more than that has been asked for in straight pay boosts, and in calls for further additions to fringes. Looking ahead, I foresee no change in labor's decision to bypass the government's productivity guideline. Labor leaders, in order to hold their own jobs, try to get all possible concessions in both straight raises and fringe benefits. It certainly looks now as if any reduction in union demands over the period ahead would stem from possible business weakness and the fear of layoffs. Raises Via Shorter Hours Some union leaders have on their agenda another move that will result in still higher labor costs,—and this is the drive for

### Your Personal Health

**Frostbite** Cold weather is back again and with it comes the health hazards that accompany subfreezing temperatures. An ever present winter danger is frostbite. Frostbite is, naturally, more of a problem in the northern states, but even in most of the south there are occasional periods of weather cold enough to nip unprotected noses and fingers. Frostbite can be very painful for a long period, can result in amputations and can leave the victim hypersensitive to cold for the rest of his life. In some ways the damage of frostbite is similar to a burn. Injuries to both deep and shallow tissue are comparable. First degree frostbite, like sunburn, is an injury to surface skin. It is likely to attack ears, toes, fingers, cheeks or nose. Second degree frostbite produces blisters as in second degree burns. In third degree frostbite the damage is deep and much of the frozen part may be lost. Prevention is the best protection against frostbite. This means being properly dressed in warm clothing, waterproof shoes and heavy, dry socks, and with good covering for head and ears. Keep clothing dry from both outside moisture and perspiration and avoid tight clothing or garters that may restrict circulation. Motorists traveling across country in subfreezing weather are advised to have heavy clothing and shoes in the car, in the event that there should be a breakdown and it becomes necessary to hike for help. If your auto is stalled in snow or ice some distance from help, it may be safer to stay in the car than to walk a long distance in extreme cold with clothing that is too light. The first signs of frostbite are "pins and needles" prickly feeling and then numbness. The affected part will turn white or gray and later red. First aid possibilities are limited. Thawing of the tissue as the 35-hour week. They want this concession with no change in take-home-pay, which would mean a 14% hike in basic hourly wage rates. Since they see little chance of getting Congress to grant such a boon, they hope to get it by fighting ahead company by company, industry by industry. I fear you may see more of this as 1963 works along.

soon as possible is the major consideration, and this can best be accomplished by getting the patient indoors into a warm room. Treat the frozen part with gentleness and do not rub or massage it. The old technique of rubbing snow or ice water on the frozen part does more harm than good by delaying thawing. Medical treatment is needed promptly in frostbite. Control of the often severe pain is required and antibiotics and antitetanus injections may be needed if the skin is broken. Often the frozen skin will eventually slough off.

The principle of a graduated tax was applied as early as 1797, when progressive inheritance tax rates were based on the amount of inheritance received. There is no book so bad that something good may not be found in it. Cervantes.

### March of Dimes Scientists Find Armadillo Helpful in Twin Study

An oddball research animal that looks like a cross between an anteater and an armored tank is causing scientists to wonder if "identical" human twins are so identical after all.

The nine-banded armadillo, which is a native of Texas and points south, has several child-bearing characteristics that are similar to those of humans.

For this reason, Dr. Kurt Benirschke and colleagues at Dartmouth Medical College, Hanover, N. H., are using armadillos for studies of pregnancy and birth defects under a National Foundation-March of Dimes research grant.

It takes about the same length of time—nine months—for baby armadillos or baby humans to develop in the womb. And in both species, the placentas are structurally similar.

But a quirk of nature has made this odd mammal even more useful for medical research. It always has a litter of four. The four baby armadillos come from the same egg and are therefore always of the same sex.

What has this to do with human twins?

For years, scientists have believed that identical twins—those who develop through division of the same egg—are exactly alike down to the very last gene. They've assumed that it was this genetic similarity that permits successful transplants of skin or of organs between identical twins.

If this theory were wholly correct, it should be easy to exchange skin grafts between identical young of the same armadillo litter since they all came from a single egg.

But Dr. Benirschke and his associates, Dr. Alastair H. Imre and Dr. John Anderson, have found that such grafts often fail to "take."

This paradox has led them to suspect that the answer to graft tolerance cannot be found solely in genetic make-up. The March of Dimes researchers think the key may lie, at least in part, in the relationship of the embryo to the placenta—the material which nourishes the unborn infant.

Each armadillo quadruplet has its own isolated segment of placenta. This means that each gets a slightly different supply of nutrients, hormones

Dr. Kurt Benirschke, March of Dimes grantee at Dartmouth Medical College, Hanover, N. H., studies the strange-looking armadillo.

and blood elements. While such differences are minute, they may be just enough to individualize each animal's development so he won't accept grafts and transplants from his own littermate.

Human twins, on the other hand, sometimes share a common placenta—each getting exactly the same nutrients for development. Thus they become favorable candidates for any necessary organ exchange or skin graft in later life.

If graft acceptance in twins is related to their sharing—or not sharing—the same placenta, some other puzzles of pregnancy may also be a little closer to solution. Why, for example, doesn't a pregnant animal "reject" its own embryo, which is actually a "foreign" substance made up of cells quite different from her own? Or does she, in some in-

stances? Could such a reaction lead to spontaneous abortion or a defect in the offspring? Or could it be that the exchange of substances through the placenta permits the mother to "accept" the embryo?

Does this exchange also make it possible for some mothers and children to tolerate each other's skin or organ grafts later in life?

These are questions which have stumped scientists for many years. The answers, though still to come, may throw a bright new light on many problems of pregnancy, the causes of certain birth defects, and the success or failure of organ transplants.

And it may be one of the nature's more incredible creatures—dasyus novemcinctus (known familiarly as Mrs. Armadillo)—who will help turn the switch on this lamp of knowledge.

### It's Time For... EYE CARE

Dr. Newton K. Wesley HOW DO WE SEE?

Most people believe we see with our eyes, but actually the eye is only a receiver of light impulses. These light impulses are changed into nerve energy and carried to the brain by way of the optic nerve.

You see with your brain, not your eye. The brain interprets the nerve energy and you see.

There are many factors to seeing. First, the image must be focused properly on the eyes; the two eyes must coordinate; the eyes must be healthy; transparency of the eye must be maintained; color may be discerned; and many other factors.

Have you ever walked right by a friend without seeing him? Your explanation would be that you were preoccupied. The truth is that your brain did not elect to see your friend, but was concentrating on your thoughts or on some sight ahead of you that excluded seeing your friend.

So when you think of vision, just remember there is much more to it than casting your eyes on a subject. There is also the optic nerves, the crossing of the optic nerves from the two eyes—half crossed to one side of the brain, and half crossed to the other side.

Another good thing to remember about your vision is to take the advice of the National Eye Research Foundation and have your eyes examined twice a year.

Wesley

Home Loans For Veterans

The Baltimore Veterans Administration Regional Office will receive an allocation of about \$775,000 for direct GI home loans in Maryland, according to F. E. Quinn, manager of the VARO.

Mr. Quinn said the funds will be made available to the Regional Office early in January, 1963, and that the fund will adequately cover the applications already on file in the regional office.

The \$775,000 allocation will be made available for direct home loan purchases in Maryland during the 1963 fiscal year third quarter which began January 1.

Mr. Quinn said \$750,000 had been allocated by the Washington VA Central Office for direct loans about July 1, and that another \$75,000 had been allocated in October.

Mr. Quinn pointed out that direct loans to veterans are limited to non-metropolitan areas. Such loans are made to eligible World War II and Korean conflict veterans.

Additional information concerning direct home loans may be obtained by visiting or writing the VA Regional Office, Fayette and Saint Paul Sts., Baltimore 2, Md.

Edgar Hoover Stresses Danger Of Communism

The year 1963 dawns on a deeply troubled world. Communism jeopardizes world peace and the posterity of mankind.

Man—the fallible being that he is—now holds in his hands a destructive force of such great potential that its very existence poses the question of whether or not mankind is to have a future.

In this country, Americans are justifiably alarmed at the ever-present threat of communism to the priceless heritage of our great land. They view with grave concern the tactics of the Communist Party, USA, to undermine our system of justice.

In times of peril, the rallying strength of our country stems from its democratic safeguards. Our faith and trust are anchored in the God-inspired hallmarks of Americanism—truth, liberty and justice.

Law and order are bulwarks of freedom. Law enforcement must relentlessly promote the perpetual existence of this honored annual existence of this honored oxion. In this new year, we must labor with unswerving devotion

Potomac Edison To Begin Land Use Program

R. G. MacDonald, President of the Potomac Edison Company, announced this week that the company will commence immediately to develop a Land Use Plan of the area it serves in portions of four states.

A "pilot" plan is to be undertaken first in the utility company's Frederick Operating District. This district generally includes Frederick County and parts of Carroll, Howard, and Montgomery Counties.

Work on the study will be part of the Area Development activities and will be under the supervision of John H. Larson, the Company's professional planner.

Mr. MacDonald stressed the need for both public and private industry planning to effectively meet the needs of our developing areas. He pointed to development activities extending outward from the Baltimore and Washington metropolitan areas and the need to anticipate this growth to insure orderly and efficient development patterns.

Co-ordination with public agencies in the development of the Potomac Edison System Plan will

be an essential part of our program," added Mr. MacDonald. "Our Community Development and Planning Program has, over the past two years, assisted many communities and counties interested in planning for their own future growth."

Miss Judy Keilholtz, Baltimore, spent the weekend with her parents, Mr. and Mrs. Clifford O. Keilholtz.

Miss Ruth Freeman, Baltimore, is visiting with her parents, Dr. and Mrs. H. P. Freeman.

About 40 members of the CSMC from St. Joseph's High School visited the Adams County Home, Gettysburg, recently, and distributed gifts and sang carols to the guests.

SPECIAL WASHINGTON REPORT

Voters Hold Power In Health Crisis

By Sen. Clinton P. Anderson (D-N. M.) Sponsor, Anderson Health Care for Aged Bill

This fall's Congressional elections will help decide one of the major social questions of the Sixties: whether something effective will be done to help millions of aged meet the sharply rising costs of their health care?

The basic social objective of President Kennedy's plan is to cover the hospitalization and nursing home costs of virtually all citizens over 65, through a small increase in the Social Security tax—about 25 cents a week out of a worker's paycheck.

There are, today, some 17,800,000 citizens over 65. Current rate of increase of 1,000 a day will bring the figure close to 22,000,000 by 1965.

As medical science has greatly prolonged human life, we have a new and existing condition of society, not contemplated by social and economic theories that predated it.

If men and women are to live longer, they are rightfully entitled to do so in reasonable security, without damage to their self-respect. That includes health care.

We know when protracted affliction strikes the aged in their last years, none but the most fortunate of families can live up to their obligations to the dying without disregarding their obligations to the living.

Health care through Social Security is not only a major requirement for the aged, but is also of great importance to all Americans who have parents, who are liable to be ill, and who have children to educate at the same time, mothers and fathers in their 30s and 40s.

The Administration's health care program is a fiscally-sound, thoroughly American approach to a critical problem that exists

and one that is getting more acute by the day.

You are going to have a chance to make a judgment on this issue. You vote will help to decide whether we will return a Congress that will support a program like health care for the aged through our Social Security system.

As the New York Times said after the Senate defeated the Administration's medicare proposal "The Nation's elderly citizens suffered a worse setback than the President in the Senate's decision to kill the compromise bill to provide health care for the elderly through the principles of Social Security."

NEED FOR PROGRAM EMPHASIZED No matter how much the anti-health care for the elderly, heavily-financed pressure groups try to distort facts, the need for this program is recognized by responsible private and government studies.

The general opinion was expressed in an editorial in the Washington Post. It said: "The Senate has disposed of the Administration's medicare plan for giving health assistance to the aged but it has not disposed of the need out of which these proposals arose. That need will continue to exist as long as it is as unsatisfactorily met as it is now."

YOU...and your HOME

by AMY AND AVERY STUART

"Let's Finish the Attic!" When we decided to "enlarge" our home by finishing the attic, we splurged on the best materials available...

Insulation was the first major chore. Our Arrow T-50 heavy-duty staple gun made quick work of it, and the results looked as "professional" as any similar job we'd ever seen.

When it came time to fasten our slick new ceiling tiles...the staple gun once more saved us sore muscles and backaches! With one hand free to hold each tile in place, the job was done right the first time...

No old-fashioned nailing equipment could have equalled that powerful Arrow staple gun. Man-sized jobs like fastening electrical wiring in place...

Our do-it-yourself attic is now one of the handsomest rooms in the house! Ask at your local hardware store for expert advice on tools and materials, when you're ready to finish your own attic at home.

Kittens to Cats by H. JACK MIDDLETON, Purina Cat Care Center

Ups and Downs in History In ancient Egypt cats were so highly respected that anyone who harmed one faced mob violence. In fact, if an Egyptian passed a dead cat on the road, he stopped in his tracks, beat his breast and loudly proclaimed his innocence.

Cats fell on bad days during the Middle Ages, when they were associated with witchcraft and the powers of darkness. But today, puss is making a comeback. Nobody knows exactly what the cat population of the United States is, but at the Purina Cat Care Center of St. Louis, Mo., we estimate it's in the neighborhood of 25 million and gaining fast.

History is crowded with cat stories of cat lovers, known as "ailurophiles." Authors Victor Hugo and Charles Dickens seldom wrote a word without their favorite pet cat looking on, and the English Cardinal Woolsey never gave an audience without a cat on his lap.

Cats are believed to have been domesticated from the African wild cat about 12,000 years ago, but a favorite Middle Eastern legend says differently: When Noah took the animals aboard the Ark, his followers protested the presence of the lion. So God caused the lion to suffer a fever. Next complaint was about the rats. Whereupon God caused the fevered lion to sneeze... and out popped a cat. The rats fled and all went well.
