

CHRISTIAN ENDEAVOR.

Topic For the Week Beginning Sept. 15.—(Comment by Rev. S. H. Boyce.)

Feasting is not generally supposed to produce leanness, and yet it is known to all that there is a feasting—a feasting of the body—that does produce a leanness—a leanness of soul.

The application of this subject to temperance is easily made and readily understood. Intemperance in drink is disastrous in many ways, but it is especially disastrous to the spiritual life.

Along all lines intemperance is a deadly foe to spirituality. And this is one of the strongest reasons why it should be avoided and opposed by all who do avoid it.

Platform of Principles. In the early days of the movement Rev. Dr. Clark drew up the following...

First.—The Society of Christian Endeavor is not and is not to be an organization independent of the church.

Second.—Since the societies exist in every evangelical denomination, the basis of the union is not the denomination...

Third.—The purely religious features of the organization shall always be paramount.

Fourth.—The Society of Christian Endeavor sympathizes with temperance and all true moral reforms...

In South Africa. Two new societies have been organized in the Zoutpansburg district, South Africa...

38. D. O. N., Wilkesbarre, Pa.—The constitution provides that "Each committee shall make a report in writing to the society at the monthly business meetings..."

The Omaha woman who got out an injunction to prevent her husband from speaking to her wanted to be sure of having the last word.

Consumption

The only kind of consumption to fear is "neglected consumption."

People are learning that consumption is a curable disease. It is neglected consumption that is so often incurable.

At the faintest suspicion of consumption get a bottle of Scott's Emulsion and begin regular doses.

The use of Scott's Emulsion at once, has, in thousands of cases, turned the balance in favor of health.

I'm Growing Old.

My days pass pleasantly away; I feel no symptoms of decay; I feel no signs of olden days.

My growing talk of olden times; My growing fondness for news; My growing aptness for rhymes;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

My growing fondness for news; My growing love of crowds and noise; My growing love of the plow;

The Love Apple.

It is painful to think back to the time when the luscious tomato was considered a barbarous poison and condemned as unfit for table use.

Now such fallacy hinders the general consumption of tomatoes. They are particularly refreshing for the large amount of water and oxalic acid which they contain.

A dish that in many households takes the place of meat for certain meals is the tomato.

Fried Tomatoes.—Tomatoes, for frying, should be slightly green rather than over ripe.

Scrambled Eggs and Tomatoes.—Beat six eggs, add half a cupful of stewed tomatoes, salt and pepper to season and mix thoroughly.

Tomatoes and Stuffed Eggs.—Stewed tomatoes with stuffed eggs is a tempting entree.

His Life Saved by Chamberlain's Colic, Cholera and Diarrhoea Remedy.

B. L. Byer, a well known cooper of this town, says he believes Chamberlain's Colic, Cholera and Diarrhoea Remedy saved his life.

Who would have thought that doctors would countenance the practice of gum chewing?

The Divine William. This story of the German emperor is touched for by M. A. P. at dinner one night when the emperor was staying to another across the table.

Carnegie Attacked. The literary sensation of the moment is a book entitled "History of the Carnegie Steel Company."

Bedridden, alone and destitute. Such, in brief, was the condition of an old soldier by the name of Evans, Versailles, O.

Rural School Libraries. Not only does the rural school library develop the reading habit, it develops it along right lines.

A Remarkable Remedy. Chamberlain's Cough Remedy has a remarkable record. It has been in use for over thirty years.

Irrigation of Strawberries. The Georgia experiment station states that irrigation of strawberries cannot be recommended for general practice.

Tanning Done by X Rays. A new process it is claimed that leather can be tanned by X rays.

How to Clean a Rain Coat. This is an excellent way of cleaning the mud off your coat.

How to Roast Cucumbers. Potatoes roasted in the pan with beef or mutton are known to be palatable, but not very many American cooks know that onions, carrots and even cucumbers are equally good.

Connections at Cherry Run, W. Va. B. & O. Passenger trains leave Cherry Run for Cumberland at 6:30 a. m., and 11:00 a. m., and 5:30 p. m.

PEOPLE OF THE DAY

Count Tolstoi's recent interview. Count Leo Tolstoi for the New York World, reports the famous Russian novelist and reformer as saying many bitter things about certain well known Americans.

FARM AND GARDEN

Practical Devices. Labor Saving Implements For Use in Rectifying and Settling Posts.

Among practical devices described by Ohio Farmer correspondents are the following: I had a lot of posts to pull out, and I invented a device, shown in sketch, a lever, fulcrum and chain, made of such material as I could find lying around.

With this device my hired hand and I pulled out fifty-two posts in less than an hour. The lever is made of one of our sulkies, tongue about nine feet long. Fourteen inches from the

large end I bored a five-eighths inch hole for the fulcrum. A good, strong bolt was bolted on top of the end of the lever, with two three-eighths inch bolts, the bolt projecting over the end to catch in the links of the chain. I use an ordinary log chain, with a hook on the end. The fulcrum is made of a sufficient quantity of logs to support three pieces spiked together, each piece 2 feet 8 inches long and thick enough to allow the lever to move easily between the two outside pieces, which are six inches longer and project above the centerpiece that much.

These outside pieces are 1 1/2 by 4 inches. Bore the five-eighths inch hole through these projecting outside pieces about an inch and a half from the top. Put in the lever, run a bolt through, and the pulley is ready for business. I pulled up some old barn shed posts in this manner, and they came up with two horses and chain. This device is not patented.

I will illustrate a very handy instrument for setting posts on clay soil. To drive a post down to a proper depth in clay soil without first making a hole is apt to splinter the top of a post. How to prevent this and save labor is the question we want to get at. The cut shows an instrument for making a post hole that is used in Georgia county, O., by a number of farmers. It is made of cast iron and is 20 inches long by 3 1/2 inches square, running to a sharp point at the bottom. It has a hole in the top for a wood handle. In the spring of the year, before the ground gets settled down hard, one can make a hole ready for a post with two or three jacks, and by having a post properly sharpened one can set it with two or three taps with a maul, so that the fence will stand firm. By going over the fence every spring, giving each post a couple of taps with a maul just after the frost comes out of the ground, it will stand straight. I have in mind several rods of fence that has been up for ten years, and the posts stand straight and solid today.

Summer Silos. There is much that might be said in favor of summer silos. Undoubtedly the invested capital is somewhat greater where provision is made for ensiling a sufficient quantity of forage to supply the dairy herd through the summer. Perhaps the summer silo will even cost more for a given capacity than will a winter one, inasmuch as summer feeding takes cognizance both of the losses of silage and of the greater rapidity of fermentation. It becomes necessary, therefore, for summer feeding to materially reduce the surface area from which silage is fed. One should so limit the surface area that the average feed will remove about two inches. If this is not done or if the silage is not taken into a room and the door closed or there is danger that the whole apley might be seized with a frenzy for robbing. Great care should be taken in opening hives at times when little or no honey is coming in from the fields, and at no time should honey be left exposed in or near the apiary, says F. G. Herman in American Agriculturist.

How to Prevent Robbing. Fond as bees are of nectar, they are yet fond of honey and will forsake their hives for the honey. This is especially true of the bees of the field, and it is not surprising that they will rob the hives of the weak and rob them. Old time beekeepers understand that when honey is to be taken it must be taken into a room and the door closed or there is danger that the whole apley might be seized with a frenzy for robbing. Great care should be taken in opening hives at times when little or no honey is coming in from the fields, and at no time should honey be left exposed in or near the apiary, says F. G. Herman in American Agriculturist.

How to Make a Curing Fluid. To make a curing fluid take three drams of Irish moss, pull it into pieces, soak in cold water for two hours, drain and press quite dry in a cloth. Next mix in one pint of water for fifteen minutes, strain through muslin, and when cold add an ounce of alcohol to half a pint of the decoction. Shake well before using. Moisten the hair with this lotion and put up on curls papers.

How to Clean a Rain Coat. This is an excellent way of cleaning the mud off your coat. To take off the stains rub with plain water. Dip the garment in cold soft water, then with a scrubbing brush and yellow soap proceed to scrub it all over, having spread the garment flat on the table. When the dirt is removed, dip the coat in repeated waters to get rid of the suds, but do not wring it. Hang it up in the air or in an airy room to dry, but do not put near the fire. Paint or grease spots may be removed by scouring drops or spirits of turpentine, but common soap will do the rest. In cleaning mackintoshes always avoid hot water.

How to Roast Cucumbers. Potatoes roasted in the pan with beef or mutton are known to be palatable, but not very many American cooks know that onions, carrots and even cucumbers are equally good cooked in this manner. Medium sized cucumbers are pared and sliced, and roasted with onion and salt for an hour. Carrots and onions are especially good with mutton.
