TANEYTOWN, MARYLAND, FRIDAY, JULY 10, 1925.

NO. 2

PROCEEDINGS OF BOARD OF EDUCATION

Lot Purchased for Taneytown School and Construction Bids asked.

The regular monthly meeting of the Board of Education was called to or-der at 10:30 o'clock in the office of the Board on July 1, 1925. Commissioner Slingluff was absent.

The minutes of the previous meeting were approved as read. The list of bills presented to the

Board was approved and ordered paid. Superint ndent Unger was author-ized to award the contracts for the construction of the Pleasant Gap building.

It was deemed advisable to secure the opinion of the Counsel of the Board of Education with reference to whether the Board should accept warrants from the Board of County Commissioners so as to be able to pay the teachers' last salary check, and make up other mandatory amounts for which insufficient amounts had been provided in the budget. The Coun-sel's opinion is to be sent to the Superintendent by July 10th.

The Board decided to purchase the land in Taneytown from Mr. Calvin Fringer, for \$1500.00, to erect the new Taneytown school building on. Mr. Fringer was directed to have a proper deed prepared and delivered to the Superintendent as soon as possible. The Board decided to ask all former

bidders on the Taneytown building to re-bid. Their bid is to include a bid on the old school building in Taney-town, not including the lot, for use in the construction of the new building. The Board reserves the right to refuse to accept the contract bid on the old property until the same has been offered at public sale both house and lot together and separately. These bids are to be opened and contracts awarded on July 13, 1925. Commissioners Koons and Allender, and Superintendent Unger were appointed a committee to award the contracts and have charge of the construction of the new building.

After a full discussion of the advis-ability of opening the Pine Knob school, the matter was laid on the table

The Superintendent was authorized to make a contract with Mr. William Umbaugh to transport the children of Freedom district for a term of three years.

The request of Mr. Cross, Principal of the Hampstead School, that the Board pay something toward their bill for a new motor and other school equipment, was given careful consid-eration. The Board authorized \$50.00 to be paid to Mr. Cross to be credited to this bill.

The request of Mrs. Esther K. Brown, Principal of Pleasant Valley High School, that the Board allow the school \$15.00 for rental of athletic field and \$8.00 for services of umpires was refused as a whole. The Board decided to allow \$15.00 for rental of

MERLE ECKARD BADLY HURT. Victim of Careless Driving and a Head-on Collision.

Merle Eckard, son of Mr. and Mrs. Russell N. Eckard, met with a serious auto accident, last Saturday evening. He was returning alone from Emmitsburg in his Ford coupe, and when about midway between Emmitsburg and Bridgeport, was struck

by a large car going in the opposite direction, knocked off the road and down an embankment, his coupe turning over and completely around. Fortunately, he was not rendered unconscious, but was able to free himself from the wrecked car and come to the roadside, where he was taken care of by an Emmitsburg garage man and brought to his home, and later to Taneytown where he was given proper treatment.

He was badly cut about the forehead, was otherwise hurt, and lost a great deal of blood. His account of the accident was that he was practically off the concrete, and the northbound car going at rapid speed col-lided with him without cause. The car contained five persons, bore a West Va. license, and did not stop to render any assistance. The number of the license was taken at Emmits-burg where the car stopped for minor repairs.

The coupe was badly wrecked hav-ing both front wheels broken and top damaged. For several days Mr. Eckard was theratened with a serious case of concussion of the brain and was critically ill, but the last report is that he is improving. (See Bridge-port correspondence for further de-tails.)

A Letter of Commendation.

Editor Record :-

Permit me to extend to you in be-half of the Endeavorers of Carroll County their sincere thanks for the splendid spirit of co-operation your excellent paper has manifested toward our Union in printing from time to time accounts of our various activities. We especially desire to thank you for the fine report of our County Convention.

Sometimes perhaps you feel that your earnest efforts to print a clean moral paper are not appreciated, we however as the officers of our county Christian Endeavor Union do appreciate all that you are doing to help our county. The fact that our Union has taken on such a wonderful new growth we believe is partly due to the willingness on your part and that of other Editors in our County to print our activities, people reading about Christian Endeavor have their interest awakened and find their way into C. E. Societies.

Again let me say that every mem-ber of the executive committee de-sires to convey his or her personal thanks to you and to assure you because of your interest in our work to boost your paper whenever possible. With best wishes for the continued

growth of your excellent paper. remain

Sincerely,

THE ANTI-EVOLUTION CONTROVERSY.

Interest Strong in the Tennessee Law Coming up for a Test.

Discussion is pretty general, in some form or another, over Tennes-see's Anti-Evolution law the test of which will soon be occupying a great deal of newspaper space. While the question is a legal one, involving the constitutional status of this particu-lar law, the theory of evolution in-volves religion and anti-religion, and it is this side of the question that is receiving the most attention.

The Tennessee law does not define what its citizens shall, or shall not, believe with regard to evolution. The law reads;

"Be it enacted by the General As-sembly of the State of Tennessee that it shall be unlawful for any teacher in any of the universities, normal, and all other public schools of the State, which are supported in whole or in part by the public school funds of the State, to teach any theory that denies the story of the divine creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animals."

The Watchman Magazine, in its August issue, will editorially cover the subject in detail, advance sheets of which have been supplied to the press. It will say in part;

"This law does not in any sense prohibit belief in evolution, nor free thought, nor the teaching of evolution in non-state-supported schools; but does prohibit the use of the tax funds of the people, the majority of whom do not believe in evolution, to teach the immature minds of the chil-dren of those people that the theory of evolution is a demonstrated fact and the truth, when as yet evolutionists themselves admit that it is merely a theory subject to change on the discovery of new truths. Nor does this law debar the discovery and teaching of new facts which may uphold or tear down the evolution theory. Proven, incontrovertible facts are welcomed by every educated and alert mind everywhere. But theories and hypotheses and guesses, based even in a logical way on partial facts, are quite another matter."

"Referring to the law again it will be seen that the teacher is not com-pelled to teach the Bible narrative as authentic. He is told not to teach anything contrary to it. In other words, to be neutral. In the same way, he is told not to teach anything that declares evolution to be false. As far as the public schools are concern-ed, the law would permit both the Bi-ble narrative and the evolution theory to be mentioned as suggested explanations of natural phenomena, and leave any allegation of truth or falsi-

ty to pupils and parents. "Here is the crux of the whole ques-"Here is the crux of the whole ques-"Here is the crux of the whole ques-tion: Already on the statute books of the State of Tennessee, as in other the state of Tennessee, as

SUNDAY SCHOOL CONVENTION. **MINE OWNERS** Carroll Co. Sunday School Association Westminster, Tuesday, July 1st.

The annual convention of the Sun-day Schools of Carroll county will be held in Centenary Methodist Episcopal Negotiations With the Miners are Church, Westminster, on Tuesday, July 21, one day only, three sessions, from 9:30 A. M. to 9:30 P. M. Every Sunday School in the county

is expected to send delegates to this meeting. For the past several years the interest has increased from year to year and the attendance has grown, until last year 88 out of the 111 schools of the county were represented.

It is the hope of the county officers this year that every school will have some of its membership present. A splendid program has been prepared, and every arrangement made for the comfort and convenience of those attending. The ladies of the church will serve dinner at 50c, and supper at 35c. All delegates are urged to attend the morning session particularly. Mr. and Mrs. James V. Cristy, well

known gospel singers, will have charge of the music. Rev. W. V. Garrett, who has been instrumental in building up one of the largest and the county, at Frinty Lutheran, Tan-eytown, will bring a helpful message on "How a Pastor can put new life into a Sunday School." From 10 to 12 A. M., will be devoted to confer-ence work for the several departadult divisions, home department,administration, including district offi-

cers, superintendents, etc. The Secretary will attempt to show by a map the progress made in the county work last year. Mr. C. H. Gundersdorf, of Baltimore, will tell how he built up a class of 400 men, and Mrs. A. W. Karnell, of Philadel-bic map the hear many times delighted phia, who has many times delighted and inspired Maryland audiences, will bring most helpful messages on the duties and responsibilities of parenthood, at both the afternoon and evening sessions.

A banner will be awarded those schools having made ten precent gain in membership during the past year and certificates or honorable mention will be given graduates of teacher training classes.

Pastors and superintendents throughout the county are asked to give publicity to this event and see that their schools are represented.

Little Gateways to Health.

A visitor at a recent child health conference was startled to hear an attractive young mother say to her curly-headed four-year-old "Now, open the pearly gates." The little girl who was an experienced player of the health game immediately re-sponded by opening her mouth and showing two rows of well cared for pearly white teeth.

Speaking of the care that should be given to the "baby" teeth to keep

Mrs. Guy L. Winters, daughter of Mr. and Mrs. Joshua Rinaman, of automobile accident when a passenger train of the Baltimore Chesapeake and Atlantic R. R., demolished an automobile at a state road crossing, near Salisbury, on Sunday afternoon. The automobile was wrecked completely by the eastbound train which consisted of six coaches, and parts of the motor car were strewn along the tracks for 200 vards. The locomotive was damaged to such an extent that another had to be ordered from the Salisbury shops to continue to Ocean City. The coaches were filled with passengers bound for the resort. Burning gasoline set fire to shrubbery along the track and the front part of the engine, but the flames quickly were extinguished. in Mr. and Mrs. Winters and two children, and Mr. and Mrs. Charles Turner, all of Baltimore were returning home after spending the day with Mr. Turner's sisters, and all were more or less injured. Mr. Winters was running the car and did not notice the train until too late to avoid the collision. Funeral services were held on Wednesday afternoon, at 2 o'clock, from the home of her parents, Mr. and Mrs. Joshua Rinaman, at Trevanion. Interment was in Baust church cemetery.

Now Taking Place in Detail.

centage of the wages from the men and turn it over to the Union treas-

ury, thereby guaranteeing the unions a fund with which to support mem-

bers while on a strike. In other words,

the union does not trust its own men

to pay into the union treasury regular

assessments, but requires the mine

paymasters to do it for them, thereby

assuring an income with which to

finance strikes. It is becoming suspected that the

miners know fully as much about the

mining situation, and the profits on

coal, as do the operators, and it is not difficult to assume that they base

their demands on the known ability of

operating companies to pay them on

known big profits on coal at the mouth of the mine before shipment.

High wages, of course, affect the price of coal to the consumer, but not

to a greater extent than big profits on the part of producers. While there may be no outright

illegal combine to control prices, it is

significant that 70 percent of the anthracite coal is produced by 8 com-panies, and that there is practically

no competition between them; the

other 30 percent is produced by about

100 independent companies, who do not announce prices but sell at best price obtainable at the time of mark-

eting. The 8 big companies, that are closely affiliated with railroads, usually appounce a price about April 1, that holds throughout the year with

On Thursday the anthracite opera-tors announced their refusal to grant

the demands of the union miners, as-

serting that they are impossible, and

unless wages are reduced or produc-tion increased, the anthracite indus-try will be ruined. The Companies

used largely now, through improved methods, and that anthracite is no

longer a necessity, but must compete in the markets with non-union

only slight variation.

bituminous.

Brig. Gen. Upton, commandant, in an address to 600 Philadelphia citizen soldiers at Camp Meade, vigorously made it clear that he would use every means of keeping boot-legging and vice out of the Camp, and threatened dismissal to any member of the corps

found drinking, or in possession of liquor. He further said; "The army today is making one of its greatest fights against booze; we are making grand headway and the soldiers—like the Nation at large— are learning that the War Depart-ment and the prohibition authorities mean business.

"The United States in the matter of prohibition is far ahead of the rest of the world, just as it was in spiritual and suffrage reforms. Liquor must go, but I don't believe there is a mother whose son is under my com-mand who isn't glad.

"I am doing everything in my power against the bootlegging octupus in our camps selling not whisky, but a concoction of iodine and gasoline which they call liquor.

"I won't allow myself to take a drink, and the same is true of my officers, the men who set the example for the others.

"Then there are five rules for the world to observe today. By this I mean, temperance, thrift, business, claenliness and more competition with one another.

one another. "Some of you fellows come from homes where they think prohibition is an infringement on their personal rights. I would like you to take this

idea home with you. "Suppose you had an automobile and then put sand in its cylinders. People would call you a plain fool, wouldn't they?

"But how about yourself? When you fill up on this deadly stuff they call liquor don't you ruin a vital organ which can never be replaced? Which is the bigger fool, I would like to know, the man who puts sand in his automobile, which may be replaced for \$25 or upward, or the man who fills his stomach with bad liquor?"

Extension Service News.

T. B. Test.

At last we have received a notice from the Baltimore office of the Bureau of Animal Industry that a county-wide tuberculin test will be started in Carroll County, Monday, July 20. The districts in which the test will be started have not been designated, but it is thought that the Eastern Column bordering Baltimore Co., will receive the first tests. Six or nine veterinarians will come into' the county. The work will be put on under the supervision of Dr. T. B. Simonds, U. S. B. A. I.

Dairymen are urged to co-operate with the veterinarians in putting on the campaign. Have cattle in the barn on the day the veterinarian is expected on your farm. If you want any information get in touch with headquarters at the County Agents

The anthracite miners convention at Scranton, last week, resulted as expected. The men will demand a twoyear contract, 10 percent increase in wages, complete recognition of the union, and a number of lesser de-mands having to do with working onditions. The demands include the "check off", by which the operating compan-ies are required to withhold a per-

most enthusiastic Sunday Schools in the county, at Trinity Lutheran, Tanments, children's, young people's and

the athletic field but could not allow for the umpires, as there is a ruling between all the high schools in the county that each school is responsible for securing its own umpires and referees.

According to an order passed by the Board at a former meeting, the accounts for the fiscal year of 1924-25 of the principals of all high schools, except New Windsor, were audited by a committee consisting of H. G. Curd and Ross J. Blocher. Summary of the total report is as follows and found correct.

School	Receipts I	Bal. 1925
Manchester	\$ 610.74	
Taneytown	590.96	116.93
Hampstead	1298.87	51.65
Charles Carroll	892.79	54.33
Union Bridge	758.67	42.55
Winfield	421.78	
Mt. Airy	1207,89	132.42
Mechanicsville	385.99	
Sykesville	938.19	51.19
Pleasant Valley	608.57	154.80
Westminster	6158.19	312.91

\$13872.64 \$935.87 Total .A delegation from Priestland School came before the Board re-Priestland questing that they be allowed the use of one room of the school building. Their request was granted and a re sponsible committee was appointed, consisting of Mrs. Benjamin Milbury and Rev. L. A. H. Moore, pastor, to co-operate with the Board.

The meeting adjourned at 12:45.

Seized Liquor Destroyed.

The large quantity of Scotch and rye whisky, which was confiscated by State police in Gettysburg, last November in the yards of the Philadelphia and Reading Railroad, the haul comprising approximately 195 cases and being the largest seizure of liquor ever made there has been destroyed by Sheriff John C. Shealer,

acting on a court order. With the exception of twenty-five cases, which were given to the Annie M. Warner Hospital, the bonded liquor was taken to the Oyle & Spangler farm at the eastern edge of town, where the contents of each bottle was poured into the ground, the bottles broken and the packing burned. The work of destruction was done by Sheriff Shealer, Deputy Sheriff Bixler and District Attorney John P. Butt.

The citizens of Washington, D. C., cannot vote because they are not citizens of any state and the District of Columbia is governed directly by the Federal Government, there being no elective offices.

MERWYN C. FUSS, Pres.

More About the Plank Road.

Brackenridge Allison, who is 82 years of age, the oldest continuous resident along the Taneytown and Emmitsburg road, called at our office, on Monday, and gave some further information concerning the "old plank road." · He says it was built in 1853 and 1854 and reached Emmitsburg at the time of the cholera epidemic there. He does not recall how the road was financed, but says it was built by Peter Graybill and that he made over \$45,000 on the job, which he afterwards lost in the milling and distillery business above Emmitsburg. Numerous saw mills were operated along the road and timber owners made money selling logs for the There were toll-gates, one beolank. ween Taneytown and Emmitsburg

and two between Taneytown and Westminster. He says Mr. Grabill received the

idea from the west, where such roads were tried, but does not recall whether there was an act of the legislature authorizing the road. There must have been such an act, providing for the 60 feet wide road and also for some scheme of financing, perhaps aided by a state appropriation.

Mr. Allison spent some time at the Gettysburg Hospital getting a broken hip fixed up, but his general health now is excellent, considering his age, and can get around with the use of crutches.

Proceedings of the Urphans' Court.

Monday, July 6, 1925-Vernon Dotterer, administrator of William H. Dotterer, deceased, settled his first and final account.

Clarence E. Smith and Guy W. Babylon, executors of Maria Brilhart, deceased, received order to sell stocks and bonds.

Harry A. Allison, administrator of Mary J. Allison, deceased, returned inventory of personal property and current money

Tuesday, July 7, 1925 .- Margaret A. Hardy, administratrix d. b. n. c. t. a., of George Hardy, deceased, settled her first and final account.

Archie S. Poole, infant, received order to draw funds.

ray, Mount Airy. George Ray Wettling and Vesta Elizabeth Zepp, of Taneytown. Richard Carl Repe and Mae Belle

May Davis, Cortland, N. Y.

ing of any sectarian creed or doctrine in the public schools. This is in harmony with the first amendment to our Federal Constitution, which forbids making any law 'respecting the establishment of religion.' This is not religious legislation. It is a prohibition of religious legislation in legis-latures, and of the teaching of any particular creed in state schools.

"Now these protective laws made years ago protected my child and yours from being inculcated with a Protestant creed, or a Catholic creed, or a Jewish creed, or any teaching against such creeds, when we did not want it so taught but reserved the right to teach it a religious creed at home. But now there comes along a new teaching, unknown to our forefathers, which is in reality a religion or anti-religion; and yet because its advocates call it a science and nothing else, is allowed to be taught freein state-supported schools. We are protected from all creeds we may not want, except the evolution creed. Is it not in keeping, then, with the principles we have always followed, to debar the evolution creed along with all the others, from a positive teaching as truth in public schools? Text of the indictment against

John T. Scopes says: "That John Thomas

Scopes, April 24, 1925, did unlawfully and wilfully teach in the public school of Rhea county, Tennessee, which public school is supported in part and in whole by the public school fund of the State, certain theory and theo-ries that deny the story of the divine creation of man, as taught in the Bible, and did teach instead thereof that man descended from the lower order of animals."

250 Killed Over the Week-end.

The total fatalities over the 4th. and 5th. throughout the country reached 250, while over 400 were injured, in automobile and drowning cases. Illinois headed the list with 57 dead and 100 injured. Most of the cases were due to reckless and careless auto driving. As a result, the officers of law are being urged to more rigorously enforce laws against dentist. offenders.

In olden days, France decreed that "a funnel shall be placed in the mouth of any one convicted of selling water-ed milk, and that the said milk shall be poured down said funnel, until such time as a doctor shall declare the culprit incapable of swallowing any more without danger of death."

think that the first teeth can be safely neglected on the principle that they are only the first teeth and will be gone on a few years at any rate. The first teeth are as important to the child as the permanent teeth are to the grown-up. We have been very slow in realizing the relation between sound teeth and good health in the adult, so it is not to be wondered at that mothers do not realize the relation between a child's health and the condition of that child's teeth.

"The experience of the State Bu-reau of Child Hygiene at the health conferences for babies and preschool children throughout the State, parallels that in similar conferences other states-two out of every three children we examine have badly cared for or completely neglected teeth. This is true even of children who are exceedingly well cared for in other wavs.

"Sound teeth are almost literally gateways to health. The care necessary to produce them. goes back a long way, and a long time before a baby's teething troubles begin. The foundations of a baby's teeth are dewill be sure to include the foods that will furnish the elements necessary for good tooth and bone building

"As to care; children can be saved from much suffering if they are taught to keep their teeth and their mouths clean. and free from decaying matter. Before the teeth are cut, the mouth of a young baby, cleans it-self; injury may be done by even a supposedly gentle swabbing. After the teeth begin to come, a baby's mouth can be kept in good condition by gentle cleansing with a swab of cotton wrapped around the mother's finger. After the child is two or three years old, it can be taught to use a soft brush. At the first sign of decay, a child should be taken to a

Saturday Afternoon Closing.

Inadequate Insurance.

An exchange calls attention to the fact that many property owners-and especially farmers-are carrying inadequate fire insurance. The statement is made that a barn that cost \$3000. before the World War will now cost around \$6000. or \$7000., and all other buildings in like proportion. The article goes on to say;

"It would be a good move on the part of all farm owners to look over their insurance policies and make a careful determination as to whether a sufficient amount of insurance is being carried. Even though adequate insurance is placed upon all buildings, a tornado or a fire which de stroys them inflicts a heavy loss upon the owner. But there is no use sustaining losses which can be covered by insurance and especially when

it can be obtained at so little cost." Fully half of farm buildings' and other homes, are unprotected with storm insurance, though the cost is greatly less than fire insurance, and storm loss is increasing every year. In the matter of insurance protection

there are too many poor business men, considering the many chances they take in which they can not so

Office.

Egg Laying Contest.

Maryland is to have an egg laying contest. Through the co-operation with the Maryland State Poultry Association the Maryland Experimentation Station will conduct a contest at College Park. Due to the fact that the contest will be limited to only 100 entries, Maryland poultrymen should make applications at once.

Information can be gotten through the County Agent. Due to the fact that Carroll County leads the state in poultry products and has so many commercial hatcheries there should be at least ten entries from this county. Sheep.

Pure-bred rams have been purchased by James Beachan and Miss Margaret Teese. These pure-bred Hampshire rams were located through County Agent Fuller and B. E. Carmichael of U. of M.

More sheep breeders of Carroll could well afford to follow the example of these breeders and buy purebred sires to head their flocks.

Reward to Fire Companies.

Mount Airy town authorities have paid the' Rockville Fire Company \$250., and the Kensington Company \$150., for their aid in the recent big fire at Mt. Airy that swept away a considerable portion of the business section of the town.

Permanency of Camp Meade.

Camp Meade is to be turned into one of the largest army training camps. But if Camp Meade is to be a permanence, it must have new and much better buildings. The dilapidated shacks now serving as barracks and cantonments are a poor excuse for the proper equipment. A heavy storm might wipe them out. It will pay to carry out speedily the plan of General Hines, sell the supplies the War Department finds' superfluous and apply the money to the upbuilding of Camp Meade.

No part of the earth is too hot for the production of wheat if the climate is not too humid.

Buffalo heads for trophies are offered by the Biological Survey at \$35 to \$60 each. Robes suitable for rugs or coats cost from \$40 to \$80, depending on the quality.

Accounts of drownings and auto accidents, over the Fourth and on last Sunday, were especially noticable in Monday's papers.

rived from the food of the mother-to-be. That is one of the reasons why she should plan her diet so that

-calcium, or lime, as we usually speak of it, and mineral salts. She gets these from milk and green veg-etables. The same elements are needed throughout the entire growing period of a child's life.

All articles on this page are either orig-inal, or properly credited. This has al-ways been a fixed rule with this Uffice, and we suggest the adoption of it by Jur ex-changes.

The Government Should be More Considerate.

There are a lot of fellows--some of them in Congress perhaps, or in other high position-who still have a dwindling supply of liquid "necessaries of life" in their cellars, who jump into front page publicity every now and then when they throw a verbal monkey-wrench into the government's machinery for enforcing prohibition.

True, both such men and their supplies are gradually disappearing, but there is the outlook for the quality of opposition to increase as the quantity diminishes; so that we are apt to have these front-pagers for quite a while in the future, and of course the position will be open to them as long as the proponents for the good old anti 18th. Amendment times hold struction of standards and their mulout.

The last that we have noticed is an appeal against the use of government force to support the constitution. Just a show of force is not objected to, when applied in certain directions, but when this force proposes to show practically disrespect for persons, then the government becomes unjustly, cruelly, oppressive, and such exercise of authority by the government, is arbitrary and harsh-not a all like a pleasant government ought to be.

Variety in Reading Matter.

Everything that appears in The Record is not indorsed by it, but everything published is believed "fit to print," and to be of interest to somebody. As a rule, the fact that some particular topic is covered, is

ed-the demand fixes the price. And, while some business men will "ouch" over a turn toward sensible economy, there are very many more who will our young manhood is destined to lanot blame the President, but congrat- bor for a living-actual hand labor. ulate him, for any part that he may actually have in lowering prices.

If the President is never blamed for anything worse than advocating ters of trades, in actual, necessary, reasonable economy, he deserves to be re-elected by the largest vote ever received by any president; and, if tions. Real manual labor needed in "economy" is the issue in 1928, he will be, notwithstanding the howls of able the common ordinary citizen to "business" to the contrary.

Futile Putterers of Washington.

Sooner or later all things knowable will be known in Washington. All the mysteries will have been penetrated, the lily painted and the fine golds gilded. One of these days some one in some bureau will have finished the investigation of everything under the round and shining sun, and the findings will have been set forth, docketed, indexed, cross-indexed and filed.

The yearning to study something, anything, and publish a more or less learned monograph full of tables, charts, figures and graphs about it is the pet obsession of the tamer breed of bureaucrat. The number of allegedly "important" problems already studied, now under investigation or scheduled for inquiry would give a comptometer the cramps and make an adding machine dizzy.

The Bureau of Standards, which is uses up as much time, energy, ink and white paper as any of these insatiable inquirers. Much of its work is bureau, one would have to be created or invented, for it

is charged by law with the custody of the standards * * * the compari-son of standards * * the contiples and subdivisions, the testing and certification of standard measuring instruments; the solution problems arising in connection with standards; the determination of physical constants and properties of materials, etc. & etc.

Congress may be said to have given this bureau a "blanket" charter to go as far as it likes. The "etc. & etc." doubtless covers those weird matters now engaged. Certain of these blossoming Kelvins are busy measuring solar eclipses on radio" and "the weight of the earth." Unquestionably learned papers will be written and printed about these and then stacked in heaps in the Government

Printing Office. They are the paladins of precision, these young men. They want to opinion. know the exact "toughness of beef" evidence that we consider that a and the "warming qualities of blank- without such a background might cis I in 1541, and the structure was point of view worth considering is ets" to the last degree of stress and have reached the same conclusion

to labor, is laid bare by the fact that 90 percent of the work of the world is manual, and that nine-tenths of

not professionalism. A larger part of the new education

must be given to instruction by masthem: useful work. It cannot be limited to text book courses on so-called vocathe homes and community life to enmake a living and support a family have got to be substituted for a great deal of the gingerbread work and toymaking proclivities.

The boy must be trained in actual industry and useful, necessary trades and trained to skill and efficiency in productive labor as part of his public education. It must eventuate in mansized jobs. Public schools cannot stop with mere frills and petty exhibits of knife boxes, doll cradles and tea tables.

Manual training has so far been a step forward but there is no' good reason why a boy should not come out of the high school, having made all his grades, and mastered by actual instruction and training in all the forms of labor that are required in building and maintaining the modern community. Over-production in professioo as a result of all education above the elementary grades, or confining the educational value of manual labor to shop work and the various kinds of engineering will leave under the far-stretched, sheltering our nation with a large over-supply wing of the Department of Commerce, of discontent on the one hand and the manual production of an' army of youngsters with only text book efflciency that is absolutely unequal to most valuable. If there was no such the struggle for existence.-The

State Lass Chief Lies Commission.

The Attorney General's opinion that the Public Service Commission has no authority to require railroad companies to furnish information about grade crossings is precisely in which some of its young men are what any veteran railroad lawyer would have given.

It was the decision of a railroad "the heat of the stars," the "effect of lawyer, for, without the slightest reflection upon the integrity of the Attorney General, it is recalled that for many years he has been the Harford county counsel for the Pennsylvania Railroad, whose refusal to answer questions by the Commission resulted in the request for an official

will continue to "pay the price" ask- of a new education, directly related | Thousands of Years

of Prayers Answered I met him some eighteen years ago in the Alps on the Great Saint Bernard, about ten miles from the top of the pass. Here I found my tall old monk. As I joined the group around him I heard him say to one of

"How much finer and better it is to cross the range up here by the Pass than to go through the smoky tunnel below. And even in snowstorms now it is safe. For you see that telephone on the wall. The wire goes to an inn ten miles lower down the pass. And in times of storm, when a traveler leaves the inn, they telephone up to us here and one of us goes down with the dogs. So we reach him before he is overcome.'

"But are no lives lost in winter?" inquired a young American.

"No-not a life in many years." The tall old man was silent a moment. Then in a reverent tone he said. "For over a thousand years, my son, we have prayed for the safety of travelers here. And He has answered our prayers at last."

The smart young American asked, "Or was it the telephone?"

The old mountain climber turned and looked at the Yankee with quiet eyes. "Yes, my son-that is how God answered our prayers."-Ernest Poole in Hearst's International-Cosmopolitan.

Tributes Genius Has Paid to Human Voice

Shakespeare says:

"Her voice was ever soft, gentle and low; an excellent thing in woman." Charles Lamb says:

"How often you are drawn irresistibly to a plain, unassuming woman, whose soft, silvery tones render her positively attractive! In the social circle, how pleasant it is to hear a woman talk in that low key which always characterizes the true lady. In the sanctuary of home, how such a voice soothes the fretful child and cheers the weary husband!"

Longfellow says:

"How wonderful is the human voice! It is indeed the organ of the soul! The intellect of man sits enthroned visibly upon his forehead and in his ever and the heart of man is written upon his countenance. But the soul reveals itself in the voice only, as God revealed Himself to the prophet of old, in 'the still, small voice,' and in a voice from the burning bush. The soul of man is audible not visible. A sound alone betrays the flowing of the eternal fountain, invisible to man!"

Famous French Palace

The Louvre is a famous palace in Paris originally the residence of French kings, but since the French revolution used as a museum of art and antiquities. The Louvre derives its name from an ancient hunting chateau that stood on the site of the present palace, in the midst of a forest infested with wolves and known as the Louverie. It is said to have been a royal residence in the time of Dagobert (628). The foundation of the present building was laid by Franenlarged and adorned by successive kings, particularly Henry IV and Louis XIV, the latter being the last king to live in it. The work of uniting the Louvre and the Tuileries in one structure was completed in 1857; and the combined Louvre and Tuilerles covers an area of 48 acres.-Kansas City Times.

P

We are showing a very pretty line of Dress Materials suitable for Spring and Summer wear. They consist of Linens and Linenes, pretty patterns of Voiles and Striped Broad Cloths, and Silk Crepes and other leading materials.

You simply will have to see these before you can realize how attractive they are.

All the attractive and new shades of Indian Head linens and genuine "Everfast" Linens. When you buy a Dress from these, your worry about fad-ing has passed out forever. The manufacturers of these materials absolutely guarantee them against fading.

Our line of figured Voiles is prettier than ever. New Patterns and New Shades and good widths. They are just the thing for a cool and inexpensive Dress. Be sure and look these over. They will surely please.

Our striped Broadcloths have already proved very popular sellers; they are good widths and moderately priced.

Silk Crepes are very good for this season. You will find our assortment very attractive and reasonably priced. All the newest colors and designs.

For trimmings we have a full line of Buttons and other materials suitable for the purpose.

The best of all the newest styles are shown in the new McCall printed patterns, which have just arrived. Very striking are the Coat Dresses with inner vests that are sometimes fitted with high collars. One and two piece frocks show kick pleats panels of pleats at the side. For both plain and printed materials you will find a wide variety of models, on sale in our pattern department.

Recognized Jokes

The Scots are making an effort to stop the hoary old joke that they never spend any money. Scientists who have gone into the antiquity of jokes and made a study of the subject say that there are only about six original examples and that all humor is based on them. Old jokes come back into style or else appear wearing new habiliments. Excursions into new fields sometimes are dangerous and unprofitable. The plumber joke may not have been one of the early sextet, but it has been a favorite not only with the almanacs, but with the comic strippers and the higher class weekly funny magazines. If the plumber joke has to go, the joke writers merely

Waiters Lose "Perks"

It is not necessary to preach economy in England, where taxes are at a maximum. One after another old wasteful customs-some of which have helped provide a living for the needyare disappearing under the watchful eye of the efficiency expert. Among these are the "perks" (perquisites) of the porters and waiters in hotels. It used to be a porter's "perk" to collect all the old newspapers left lying around by guests and sell them for what they would bring. Those days are gone. Old papers, in most London hotels, must now be handed over to the management and kept for sale in bulk for the benefit of the house. It is the same way with corks-a waiter's "perk." These have become too valuable to be donated to employees. Ordinary corks sell for as much as 3 pence (6 cents) apiece; champagne corks bringing as high as 8 pence.

Desert Air Service A project for the beginning in July,

1925, of a cross-desert air service from Ramleh, Palestine, to Basrah, Iraq, as a link in the London-to-Bombay route, is under discussion in London. The plan proposes to cover the 900 miles between the two cities in one day, with a brief halt in Bagdad. The cost for passenger trans-

portation is estimated at £20 (roughly, \$100). Ninety Years in One House Miss Lovell, of Towcester, North-

Place as Poultry Feed (Prepared by the United States Department With the price of wheat in several states lower than, or about equal to, the price of corn, poultry specialists in the United States Department of Agriculture point out the desirability of giving wheat an important place in poultry rations. The influence of war-time conservation of wheat is still evident, according to specialists of the department, but there are no longer any economic reasons for conserving wheat or using it solely as a human food. On the other hand, it is so plentiful and cheap in many localities that it is a more economical live stock and

poultry feed than corn. Corn and wheat are the two best grains for poultry and are about equal in value for this purpose, although wheat can be fed alone better than corn, which is inclined to be fattening. Best results are obtained when wheat and corn are combined about equally in egg-laying rations. Following is a good scratch mixture: 1 pound cracked corn, 1 pound wheat, 1 pound oats.

While wheat is an excellent feed for dairy cows and meat animals, it needs to be ground for best results with such stock, whereas poultry relish it and utilize it as whole grain.

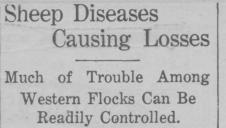

The department points out also that wheat at 89 cents per bushel, which was the approximate current price recently in seven Middle Western states, is \$29.66 per ton, which is a lower price than prevails for various other feeds having no greater nutritive value. The department's recommendations for putting wheat back on a prewar basis as a stock feed are reinforced by action already taken by some farmers. A co-operative association of Michigan farmers recently published a list of feeds for which wheat could be more economically substituted. This association contends that the local wheat market was below the cost of production and that local wheat would bring more when fed to live stock than when sold on the open market.

Wheat for Chickens Is

Recommended to Farmers Wheat fed to chickens is worth considerably more than wheat sold at the present market price, say poultrymen at the Ohio State university, who have modified their rations to allow for this

fact. They are substituting whole wheat for corn in the scratch feed, and intend to continue this substitution as long as the bushel price of wheat stays below the bushel price of corn.

But the largest saving, they say, comes from grinding wheat, and substituting whole wheat in the dry mash for the bran and middlings usually fed. The old formula for the standard Ohio dry mash was equal parts of bran, middlings, cornmeal, ground oats, and meat scrap or tankage.

(Prepared by the United States Department of Agriculture.)

A series of related sheep and lamb diseases which have caused western flock owners increasing losses can readily be brought under control by preventive measures. This announcement by the United States Department of Agriculture is based on the results of investigations by Dr. W. T. Huffman, federal veterinarian stationed in Idaho, who has worked in co-operation with Dr. J. S. Dade, inspector in charge for the state board of sheep commissioners.

Trace Many of Losses.

In the past the sheepmen have accepted most of the losses from strange diseases philosophically as one of the hazards of the business, but the increasing prevalence and virulence of the infection have caused them to seek relief. Acting on requests for assistance from flock owners in southern Idaho, the veterinary investigators have traced many of the losses to four forms of the disease known as necrobacillosis. These related ailments are: Foot rot, lip-and-leg ulceration, a venereal form of the disease affecting breeding stock, and liver infection of young lambs through the navel. In the form of the disease last mentioned, affected lambs invariably die--usually before three weeks old. The monetary loss is also heavy for

sheep affected with foot rot, since they cannot travel, and as a consequence are unable to obtain much feed. A similar result follows infection with lipand-leg ulceration. Moreover, sick sheep fall an easy prey to coyotes and other range marauders. The existence of any one form of the disease may lead to other forms in the same band, a fact which sheepmen apparently have not understood. Accordingly, the investigators report, the infection of adult sheep must be controlled if flock owners wish to avoid the fatal liver infection of their lambs.

Best Means of Control.

Treatment for the first three forms of necrobacillosis consists in the use of antiseptics and astringents, combined with the prompt removal from the flock of affected sheep. Medicinal treatment of affected lambs is useless, as infection involves the liver and soon proves fatal. Disinfection of the navel for a day or two is sometimes beneficial in prevention, but the best means of control is to keep infection out of the flock.

"Where the soil is not sandy or otherwise porous," say the investigators, 'we advocate the use of a layer of gravel at least two inches deep in the lambing sheds. When covered with straw, this makes a clean dry bed; and the soil is not worked up as occurs with dirt floors. While concrete floors for lambing sheds have been suggested, these are scarcely suitable for range conditions where the sheds are largely temporary or are on leased land. Gravel can be disinfected without difficulty; it is inexpensive and has proved highly satisfactory for the pur-

WHAT IS EVAPORATED MILK?

Did you ever stop to figure out the exact meaning of "Evaporated Milk"? The word "evaporated" may give you the idea that in the process of evaporation the milk has lost some of its valuable qualities. It hasn't. It has lost only water. Sixty per cent of the water is evaporated from the milk after it comes fresh from the cow.

The first step in processing the milk is the evaporation, when a portion of the water content is removed. The second step is the homogenization, which insures the cream being distributed evenly throughout the milk. The third is the canning. The fourth is sterilization, which takes place in the can when the milk is subjected to sufficient heat to destroy the bacteria. Thus evaporated milk remains as pure and fresh in the container as when it foamed into the pail in the farmer's barn.

Evaporated milk is now generally recognized as the freshest milk avail. able to those not living on farms and producing their own milk. For freshness in milk means purity.

Transportation of milk from the dairy country to the city is well systematized and rapid and yet owing to the immense quantities of milk that must be rushed in daily, much of it must be obtained at considerable distances and a large per cent is necessarily some days old when it is delivered by the milkman.

Evaporated milk, on the other hand, is last night's and this morning's milk. From the dairy barn, always under rigid inspection, it is hurried by farmers to factories located in the heart of the dairy country and delivered when it is fresh. Evaporated milk is canned just at its "freshest moment," when it is in its finest state. It is never allowed to get old. The whole process from cow to can requires only a few hours. It may be interesting to know that the process of sterilizing takes place after the milk has been sealed in its containers. Once in its

sterilized containers, there .s no possibility of deterioration.

The sterilizing of evaporated milk nsures its purity-it makes a safe milk for the children. Evaporated milk is boiled milk, and this makes it more digestible.

It may be used for any milk need with safety and economy. For ordinary cream needs, use it

just as it comes from the can. When a rich milk is desired, add an equal part of water. For cooking and baking, two parts water and one part milk will usually suffice.

Schwab's Early Work

Charles M. Schwab, chairman of the Bethlehem Steel company, claims affiliation with the building industry not alone because his company fabricates a lot of the steel used in the construction of the skeleton of tall buildings, but because it was he who rolled the first steel beam to be used in building construction.

He was then working in the Homestead plant for Mr. Carnegie. A shipment of 100,000 tons of steel beams in a year was a tremendous output for a concern in those days, he said. The Bethlehem company now turns out that amount in a month. Needs of the country today total

3,000,000 tons a year.

River's Left Bank

The left bank of any river is that which is left to a person facing downstream. You hear so much about the Rhine's left bank because of its military and political significance. For more than a hundred miles north from the Swiss border the Rhine divides Baden from France, and the left bank is French. Below this stretch, the left bank is the hostage held by the allied armies of occupation to guaran tee German obedience to the peace terms.

Spring Month Named

After Greek Goddess

Maia, the Greek goddess for whom the Romans named the lovely spring month, was the oldest of the Plelades, or seven daughters of Atlas and Oceanid Pleione. She and her sister, who were born on Mount Cyllene in Arcadia, according to Greek mythology, are sometimes called the goddesses of the mountains.

Maia became the mother of Mercury. and was greatly loved by the old Romans, who, on the first day of May, made sacrifices in her name. In Italy she was known as Maa Mapesta, the goddess of spring.

If you will watch the sky on a spring evening, you will see the six stars which form the Pleiades. The old Greeks believed that Jupiter placed Maia and her six sisters together in the sky, and that they formed for a long time a group of seven. One day Myrope married a mortal named Sisyphus, who in some way displeased the gods. For punishment he was condemned to spend eternity rolling a stone uphill, so that Myrope hid her face from her sisters in sorrow and shame. That is why we see but six of the daughters of Atlas shining in the sky; for Myrope's face is still concealed behind one of her sister stars .--Chicago Daily News.

Scottish City Goes

Far Back in History

The city of Glasgow, the metropolis of Scotland, had its origin in the Sixth century, when St. Kentigern founded a small religious establishment on the banks of a tiny stream which flows into the Clyde at a point where the Scottish city now stands.

Christianity was then unknown in that part of Scotland, and Kentigern was the first to introduce the faith among the rude people inhabiting that section. Beside the clearing in the forest where he built his home he hung on a tree a bell which was rung to summon the savage inhabitants to worship, and thus it came about that a tree with a bell appears on the arms of Glasgow.

The saint had trouble later on with the king of the Strathclyde Britons and had to flee to Wales. Later he returned, and after his death, at an advanced age, was buried at the spot where now stands the great cathedral bearing his name.

As "Will" Would Say It

Jones and Jenks were arguing about Shakespeare. Jones contended the bard was a genius, and Jenks scoffed at it. "Genius, nothing," he said. "All he had was a big vocabulary. Anyone that applied himself to it could duplicate Shakespeare's stuff. I could do it myself." At that moment two very bow-legged men turned the corner and walked toward the disputants. "Here's a chance to show how good you are," said Jones. "How would you describe those two fellows?" "That's easy," said Jenks. "There's only one way to describe them; Shakespeare himself couldn't may anything but 'Here come two bowlegged men." It was what Jones was waiting for. "He couldn't, eh? Shakespeare would have said: 'Ho! What manner of men are these, with legs that could serve as parentheses' !"

The new formula, now being fed at the college poultry plant, and recommended to all farmers with 95 per cent wheat on their hands, is: 2 parts ground whole wheat, and 1 part each of cornmeal, ground oats and meat scrap or tankage.

The whole wheat, it is said, increases the feeding value of the mash. Each hundredweight of wheat so fed saves buying that much bran and middlings. With middlings at \$40 a ton, wheat has a substitution value of around \$1.20 a bushel when thus fed. The farmer with a good-sized flock could more than pay for a feed grinder by the saving made under this plan, the college people believe.

Damp Quarters Cause of Roup and Other Diseases

Damp, dark quarters often are one of the main causes of lack of thrift, disease and loss among fowls on the average farm. Filth and dampness cause 90 per cent of the colds, roup and most of the other diseases that ravage the farm flock. Coldness is not nearly so destructive as dampness, for dampness seems to work through the feathers of the fowls and produces a creepy, chilly sensation that is not at all pleasant. Fowls can stand plenty of fresh air and ventilation so long as it is a dry cold.

To prevent the conditions outlined above, if you have an earth floor in the henhouse, fill in the entire floor at least six inches above the level of the ground on the outside of house. If there are any cracks in the walls or roof through which the wind and rain can blow, close them up at once.

The saddest part of all the destruction caused by drafts and dampness is that such conditions can almost always be easily remedied.

Plan to Prevent Moist Mash From Packing Hard

An excellent way to prevent moist mash from packing into an indigestible mass in the crop of the hen is by adding short-cut alfalfa or clover hay to the mixture. This sort of food may compose as much as 20 to 25 per cent of the mash by bulk in most cases. The most essential thing in this case is that the hay be leafy and cut in quite short lengths. Before mixing with the mash, first soak the hay in a bucket of water for several hours.

"To give an idea of the extent of lamb losses," the report states, "one flock master who had a band of 3.000 ewes, declared that this year the liver infection had been fatal to \$1,000 worth of lambs. Another owner who was grazing 1,000 ewes, lost 200 of them-20 per cent-from the foot-rot form of the disease."

Can Control Losses.

Observations of the investigators support the belief that sheepmen can control their losses and prevent further spread of the disease, in its various forms, if they will "cure up" all infected stock before letting it go on the range. A great many ewes, also, are being shipped East, and purchasers are urged to co-operate in suppressing any infection that may develop.

The disease appears to be associated largely with bad weather, crowded and insanitary feed lots, infected ranges, failure to separate infected animals promptly from the flock, and muddy and insanitary lambing sheds. With the control methods outlined and a clear understanding of the close relationship between the various forms of the disease, sheepmen need not continue to sustain heavy losses. In Idaho where the conditions described have received special study, further information may be obtained by addressing the State Board of Sheep Commissioners, Boise. The United States Department of Agriculture, Washington, also will furnish bulletins on sheep diseases and parasites to interested persons.

Tulerculosis Is Spread

Through Carelessness

Failure to destroy or bury deeply the carcasses of animals that die from natural causes, so that other animals cannot have access to them, is responsible for the spread of much infection on farms. In a recent investigation a farmer admitted having lost between 80 and 100 chickens from disease. He had thrown the dead fowls into the hog pen and had also hauled the cleanings from the chicken house into a field in which his hogs ran. Tuberculin testing showed about 25 per cent infection of tuberculosis among the fowls; and a sow that was tested with avian tuberculin proved to be tuberculous and indicated, moreover, that the infection was of the I iowl type.

Famous Roman City

The name "Hadrian's Villa" is given to a great number of superb structures, now in ruins, erected at Tivoli, 18 miles east of Rome, by the Emperor Hadrian (117-138 A. D.), who wished to reproduce the most striking objects he had met with in his extensive travels. According to antiquarians, the space enclosed in this way was about eight or ten miles in circumference. When, about 70 years after the time of Hadrian, the Emperor Caracalla built at Rome the celebrated baths that bear his name, the famous buildings of Hadrian's villa were rifled of their superb marbles for purposes of decoration .- Kansas City Star.

Odd Entries Into Life

Many babies are born at sea, but it is doubtful if any entered such a troublous world as a German baby girl born in mid-Atlantic during a recent terrible storm. Steerage babies often provide an event for passengers to talk about. A subscription list is always opened, with the result that the per 100 pounds baby receives a substantial start-off in life.

The record in strange birthday surroundings is surely held by the baby boy who was born 6,600 feet up in the air. His mother was traveling by airplane from Budapest to Naples when the event took place.

Ocean Area

The oceans of the world have an area of about 139,000,000 square miles and their combined volume is about 302,000,000 cubic miles. The average depth is two miles and the deepest known depth is five miles. A gallon of ordinary sea water contains about one-quarter pound of salt. From a study of the beds of rock salt underlying Strassfort, Germany, New York state, Ohio, Michigan and Kansas, and Cheshire, England, it is supposed these areas are all dried-up inland seas.

Real Sportsmen

On the fishing stream a man is patience personified. He waits hours for a nibble and congratulates himself when he finally secures one. Why can't he be as good a sportsman in his home or place of business? If he's a real sportsman he will be .--Grit

THECARROLL RECORD FRIDAY, JULY 10th., 1925. CORRESPONDENCE Latest Itemsof Local News Furnished

By Our Regular Staff of Writers

All communications for this department must be signed by the author; nor for pub-lication, but as an evidence that the items contributer are legitimate and correct. Items based on mere rumor, or such as are likely to give offense, are not wanted. We desire correspondence to reach our office on Thursday, if at all possible. It will be necessary, therefore, for most let-ters to be mailed on Wednesday, or by Fast Mail, west, on W. M. R. R., Thurs-day morning. Letters mailed on Thurs-day evening may not reach us in time.

Several of our correspondents miss-ed the "day earlier" notice last week, on account of the 4th., and their letters came a day late, and are rather out of date for publication this week. -Ed. Record.

HARNEY.

Our streams have been lined with campers, for the last few weeks, and all seemed to enjoy their vacations. Some very nice fish were caught, some lawfully and some unlawfully but we suppose that makes no differbut we suppose that makes no differ-ence because 40 years ago you could land plenty of fish in a very short time, and this thing that we call a "game law," intended to protect game, appears to be nothing more than a foolish means to get rid of the people's money; and those fellows that we call "game wardens," are, as we helieve game sharks we believe, game sharks.

Did any person ever hear of one of them, after finding a net in the stream and taking it,put the fish back into the water? No, they go into the game sack and are taken home. And when furs were confiscated, what was done with them? Were they sold and Miss Mary White, of Hanover, spent over the Fourth, at the home of the former's parents. Mary White, and the money turned into the county believe that in the majority of the game sharks dispose of them and turn the ready cash into the home

treasury for their own support. We are told by a gentleman from another state that every other man in Taneytown district must be a

game warden, and that is foolishness, and should be done away with. Jones Ohler and John J. Thompson still continue to be very sick men, and are very weak. Rev. E. K. Young has gone on his vacation; consequently there will be

no preaching at the Lutheran church. for several weeks. Pic-nic season will soon commence. Mervin Fissell and family, of Al-

toona, Pa., have been spending a few days visiting his parents, in this place. He left for home Wednesday morning.

Our threshermen are very busy at this season, and we are told that the wheat is turning out good.

Cherries have been a great crop this year, and we believe every per-son is well supplied with a nice lot of them.

SPECIALS Farms & Homes July 4 to July 11

PUBLIC SALE "LOST" TARS FOUND FOR ANXIOUS KIN Fine Farms & Apple Orchard NEAR MAYBERRY, MD.

Seamen's Institute Locates 1,905 in Five Years.

The undersigned, executor of Dr. Luther Kemp, late of Carroll Co., New York .- Every seaport town or Md., deceased, by virtue of a power city has its "port of missing men." It of sale contained in last will and is a common thing for seamen to drop testament of said deceased, and also by virtue of an order of the Orphans' out of sight thereby causing anxiety Court of Carroll County, Maryland, to friends and relatives. This is true especially of seamen who sail on rov-

ing commissions, changing from vessel at 1 o'clock, on the premises on the Stone Road from Littlestown pike at to vessel and shipping anew from port to port. Yet few of these lost seamen Mt. Pleasant to Marker's Mill, about go down with their ships. A large ma-3 miles from the former, and 2 miles jority of them are simply lost because being a happy-go-lucky lot they neglect to keep their friends informed of their whereabouts.

So many inquiries concerning lost seamen came to the Seamen's Church Institute at 25 South street that in January, 1920, the institute found it advisable to establish a "missing men's department," and the work of locating such men has been intrusted to Mrs. Janet Roper, who is known to followers of the sea in every port however

remote and small in the world. She is the house mother of the institute and to hundreds of seamen of many nationalities she is affectionately known as "Mother."

The institute receives about 100 inquiries a month concerning seamen for whom anxiety is felt. And these inquiries are gaining in number because the work of the missing department. has been increasing to such an extent that it has become international in scope. Letters are received frequently from distant ports and inland villages of Europe asking for news of rovers of the Seven Seas. Some of these communications come from Holland and Great Britain, and many from parents of American boys from country towns and hamlets.

Inquiries in Every Port.

As soon as these communications are received the work of looking up the absent ones begins. Each month the institute publishes a bulletin of men reported as missing, and these bulletins go to every port in the world. The various foreign consulates in the city which receive inquiries requesting them to locate this or that man send such inquiries to the institute if the man is a seaman. And seamen themselves assist in trying to locate the whereabouts of members of their fraternity.

From June to October the institute gives a series of concerts and entertainments and at these affairs the names of missing men are flashed upon a screen. Since there are usually between 500 and 600 men who follow the sea for a livelihood at these entertainseamen.

Old Japanese Legend of Lantern and Fan

A story of the origin of the lantern and the fan, as told in Japan, concerns a public official who had two beautiful daughters. As the story goes, the girls, who were the treasures of the father's heart, longed to pay a visit to a friend in another city.

The father, however, was unwilling for them to go, as he feared some young man of high degree would win their love and thus take them from him. In reply to their entreaties the father told them they could go, providing they promised to bring back to him fire wrapped in a paper and wind wrapped in paper.

The girls did not know what to do. They were in despair until one of their maids told them not to worry, but go and consult a certain wise woman who lived near the home of the friend whom they were to visit. After promising their father they would fulfill his wishes they set out for the friend's home. The father was greatly surprised when, upon their return, the daughters presented him with fire enclosed in a beautifully designed paper lantern and wind in a quaint-shaped paper fan. Thus, it is said, according to a story printed in the Pathfinder Magazine the lantern and fan came into use.

Blind Persons Read

Character by Voice

The similarity of voices is not confusing (to the blind) as a rule. Many are similar, to be sure, but I have never encountered absolute doubles, and in general voices are as sharply differentiated as faces-in fact, often far more.

The only difficulty I have experienced, strangely enough, is caused by one person's having several voices. All of us have; we change tone and quality more or less unconsciously according to our mood and condition. But in some the change is dismayingly marked. One woman, for example, has as many as five voices, each quite distinct.

The physical condition is also revealed by the voice in a striking degree, both as to change and normal characteristics. Fat people, for example, have a voice quality which is all but invariably detectable.

Character, too, is easily read. In fact it seems that character is revealed in the voice even more fully and accurately than in the face, no doubt because the subject, failing to recognize this, makes less of an attempt to mask the voice .-- Charles Mc-Gee Adams, in the Atlantic Monthly.

Odd Garden Products

Little Johnny, who was of school List your Farm and Homes with only ments, the bulletins on the screen are me on and before July 30th. I'm now prepared to trade and sell- in age, was on his way home from the read in the course of a month by many week-night prayer meeting, where he every state in the Union. 2 Cans Early June Peas new pack 25c had fallen asleep, a writer in the CLERKS WANTED-Want two Youth's Companion reports. His father, who had had great difficulty in waking him at the close of the service, was walking by his side, holding his hand. Fearing that the boy would go to sleep again and that he should have to carry him, the father quickened his pace and, twitching the little fellow's hand vigorously, asked him briskly where he had been that day. "Over to Mr. O'Neal's," was the "And what were they doing at Mr. "Makin' garden," Johnny replied "And what did they plant?" Johnny yawned. "Planted lett's an' onions an',-" he stumbled, and his tongue grew thick,-"an' rad'shes an' peas—an' q's—an' r's—an' s's—" At that point the father picked him Tailteann Games The Tailteann games which have been successfully revived in Ireland are so called in perpetuation of the name of Queen Tailte, who tradition says reigned over Ireland some hundreds of years before Christ. Being childless, she adopted a youth named Lugh, who succeeded to the throne at her death. In grateful memory of his foster-mother, King Lugh organized an "Aonach Tailteann"-that is, Tallte's festival-to which each Irish chleftain brought his star athletes, his best horsemen, his most expert harp-Ists. The festival, once established. was continued, with certain interruptions for nearly 2,000 years. Then it lapsed, to be revived by the Free To Hesitate Is Fatal They stood in the wings of the opera house. In a few moments she "One last word," said the conductor. "If you forget your lines do not hesi-"But what shall I sing?" asked the "That is the point. Be prepared. Sing the multiplication table with your best runs and trills. Nobody will ever know the difference." - Pittsburg Slight Misunderstanding A seamstress employed by a charitable institution had her wages raised to such an amount that she was eligible to an income tax. When she recelved the usual forms from the collector with the request that she fill them out and return them, she sent them back with the following note: "Dear Sir: I have always been insured with the Safety company and I have no intention of changing my

from the latter, that very desirable farm No. 1 of which the late Dr. Luther Kemp died, seized and possessed, containing 144 ACRES, 3 ROODS, 34 PERCHES of land, more or less. The improve-

ments consist of a fine Weather-boarded Dwelling House, large bank Barn, Wagon Shed, Corn Crib, Wash House, Large Hog Pen, and other outbuildings; a never-failing water supply. The land is in a high state of cultivation.

will offer at public sale, on

TUESDAY, JULY 28, 1925.

APPLE ORCHARD 22 ACRES.

____ OF ____

On this farm is a fine young apple orchard in good bearing condition. The properties will be offered separ-ately and as a whole. Also No. 2 Farm containing

11 ACRES 20 SQ. PERCHES of land, more or less, improved by a Weatherboarded Dwelling House, new Barn, Wash House and all necessary outbuildings. This farm will be sold, the purchaser receiving the estate's share of growing yellow corn, also the right to put out fall crop.

TERMS OF SALE ON REAL ESTATE. —One-third of the purchase money to be paid on the day of sale, or upon the rati-fication of the sale by the Court, and the residue in two equal payments of 6 and 12 months, on the notes of the purchasers, with approved security, bearing interest from the day of sale, or all cash at the option of the purchasers.

Ground-Hog Day Is Fast Losing Favor Control Campaigns Begun in Some Sections.

(Prepared by the United States Department of Agriculture.)

Because of its burrowing and feeding habits, the ground hog is considered in most localities an undesirable resident, and to make matters worse its "weather predictions" on the second of February are no longer taken seriously. "Ground-hog day" thus bids fair to disappear in states where the habits of this rodent run counter to the interests of the farmer, and in such places ground hogs, or woodchucks, or marmots, as they are variously termed, will face forcible ejection if necessary. In places where they do little harm they may be allowed to live in moderate numbers for use as game and food.

Ground-hog control campaigns in Indiana and Illinois have been popular this spring, and the biological survey of the United States Department of Agriculture has been called on to cooperate with state officials and individuals in conducting them. Four county-wide campaigns just completed by the representative of the survey in charge of rodent control in the eastern district have proved successful and have resulted in requests for similar work in 20 other counties in the district. More than \$6,000 has been raised by county commissioners for the purchase of fumigation material, which will be distributed in most cases without cost to the farmers.

Milk Fever Is Serious Menace to Fresh Cows

All of the high producers should be closely watched for milk fever during the 48-hour period immediately following freshening, says John M. Shaw, dairy husbandry specialist, Iowa State college. The only man who may feel secure from loss from this disease is the man with low-producing cows.

Restlessness, stamping of the feet and general nervousness are among the early symptoms. These are quickly followed by a paralysis in the rear legs, which causes the typical stagger. This condition becomes rapidly worse until the animal gets down and is unable to rise. Cows suffering from milk fever are often found thus with heads thrown back with their muzzles pointed flankward.

While the disease often results fatal within 24 hours, the "air treatment" is one of the surest cures. Inflate the udder by means of a milkfever outfit and the each teat with a strand of cloth to prevent air escape. In severe cases two or more inflations of the udder are often necessary. The air should remain in the udder from 12 to 24 hours, or longer in case of only partial recovery.

theory that the planet had life.

Vines are fascinating members of the plant world because they themselves are apparently fascinated by many inanimate objects, about which they twine and over which they climb or to which they cling with great strength, said Kenneth R. Boynton, head gardener of the New York Botan-Ical Garden, in a lecture in the Muphere than it had been credited with. seum building, New York city. These determinations, he explained,

They are useful to the gardener because they cover ground, banks and walls, shade porches and pergolas and cover unsightly objects such as old stumps and poles. They form a connecting link between all the different strata of architectural form.

Three vines of especial value to Slipher considers this device as imcities were discussed by Mr. Boynton: the Japanese or Boston ivy, so called because it found so favorable a home in Boston when first brought to this country, and which has been one of the most widely planted of foreign introductions since about 1880; our Virginia creeper or so-called American ivy, which was taken to Europe in 1629, and the English ivy, known for centuries, are used to cover walls, as radiating lines popularly characterized ground covers or as pot plants.

All three prove very resistant to smoke and other adverse conditions. Prominent among the climbing flowering vines are the trumpetcreeper, wisteria and honeysuckle, the rarer Actinidia, Akebia and Ampelopsis and the rapid-growing Kudzu vine,

said to grow forty feet in a season. The myrtle or periwinkle for banks or for edging window boxes was advocated by the lecturer for shady situations, and for brick garden walls, such as are so commonly seen in England. Others named were the Eonymus radicans and its variegated varieties, the small-leaved Kew variety and the large-leaved green warlety vegetus being recommended.

BUILD SCHOOLS OF CONCRETE

Philadelphia Board of Education Finds Many Advantages in New Structures.

The department of buildings of the Philadelphia board of education has recently completed an investigation designed to find the most desirable structures in which to house the increasing number of school children. The investigations covered many points of construction, costs and materials, and it was found that the most satisfactory and economical was re-enforced concrete.

A survey of the investigation has been covered by a writer in Concrete, who states:

"Philadelphia school buildings are Would Link London to New now erected without the use of any bearing walls, the entire structure being one large frame formed of concrete, encased with brick curtain walls and trimmed with stone, permitting great acceleration in actual construction and a reduction to a minimum of the possibility of delay due to labor troubles and delivery of materials. "The use of the re-enforced concrete frames has also made it possible to reduce the thickness of floor construction, which in itself has lowered the height of building as much as 36 inches, with a reduction in cubical contents of the building, and a corresponding lowering of cost. Also, it has made it possible to carry stairs of concrete up with the buildings, providing a means of travel from one floor to another during construction, which, under conditions where steel stairs are used, could not be made ready until too late to be of any value to the different contractors."

Prescott, Ariz .- Dr. W. M. Slipher. Roup Can Be Prevented

by Providing Dry House Flagstaff, Ariz., when here recently, Roup can be prevented by keeping predicted that planetary astronomy was on the threshold of finally accuthe poultry in dry, well ventilated houses and feeding balanced rations. rate determinations in connection with Under such conditions if a case ap-The astronomer expressed this opinpears the bird should be killed and ion after months of research based burned or buried deeply, says a writer on observations which he and other in Successful Farming. Treating a scientists obtained last summer when case of roup is very discouraging. Mars made its closest approach to the The bird with roup is suffering extreme prostration and the discharges earth. Among the discoveries, said Doctor Slipher, was that the planet from the disease have a repulsive odor. This odor is the factor that determines was much warmer than had been supwhether the hen has roup or a simple posed and had a much denser atmos-

cold. If a hen has a cold it is only a few steps to a case of roup. Isolate hens with running eyes and treat them with one of the coal tar disinfectants or a commercial roup remedy. Place permanganate of potash in the drinking water to keep the disease from spreading. Color the water a deep red. Never return a bird with a cold to the flock portant in adding to the knowledge of until she is thoroughly cured and looks the temperature of planets as the like a healthy, vigorous specimen.

We know of one case where a hen was treated for roup and then liberated before a cure had resulted. In about a week, eight other hens in the flock were sick with the disease, and after another week of fussy unpleasant doctoring, all of the sick hens had to be killed to protect the remainder of the flock.

A hen which has had a severe cold should be banded so she will not be included in the breeding pens the next year. When the disease has progressed until it results in roup the bird is weakened and more subject to a repetition of the disease. This trouble is so serious when once started that the owner of a good flock of poultry must not hesitate to sacrifice the best-looking hen in the flock if she comtracts the disease. It is necessary to protect the balance of the flock and prevent a serious financial loss.

Co-Operative Marketing of Eggs Is Profitable

The farm poultry flock has been made a source of cash income as well as for food for the family by many farm women who have learned from their agricultural extension agents the best methods of poultry management and preparation of products for market. The experience of the women of Fairhaven (Ga.) community, is typical of the work in many states. These farm women, desiring to improve the earnings of their flocks, brought eggs to the weekly meeting of the extension club, where the home-demonstration agent showed them how to grade and pack properly for shipment. This was continued each week until the members were able to do the work themselves. They then organized to ship their eggs co-operatively, secured as customer a grocery store in a nearby city, and, according to reports to the United States Department of Agriculture, have been carrying on a sat-York by Air in 46 Hours isfactory business for more than a

Fort That Has Figured

in American History Fort Michillimackinac, invariably clipped to "Mackinac," resulted from Father Marquette's mission established in 1673 on Point St. Ignace, and La Salle's visit there two years later. The first defense, as found by La. Salle, was a palisade, and the garrison consisted of Indians. La Salle didi much to strengthen this post. La. Motte Cadillac also was there and further added to the strength of the fort. Then Detroit swung into the lead as a fur and trading center, and in 1712: the settlement was moved to the south side of the strait, where Mackinaw City stands. There the second Fort Mackinac was built. It was this fort Charlevoix describes in Vol. II of "A. Journal of a Voyage to North America." This fort was surrendered to the English when France lost out. It was captured by Pontiac's Chippewas. and Ottawas on King George's birthday (June 4), 1763. It was without a garrison for four years. At the beginning of the Revolution it was strengthened and heavily garrisoned. The Engilsh commander, fearing capture, moved his forces to the island of Mackinac in November, 1779, where the third fort of that name was built ... It was occupied by the British until July, 1730, but did not figure in the war. It was turned over to the United States in 1796. A description of thelast Fort Mackinac, as it was in 1880, is found in Uriah Tracy's report on it to Samuel Dexter, secretary of war. It had a garrison of 57 men at the outbreak of the War of 1812. It was captured by an overwhelming British force of soldiers and Indians, and its capture brought many tribes to the British standard. The blockhouse on the hill back of the old fort was built by the British during the war. It was surrendered to the United States in July, 1818. Got Out of It Neatly Sir Henry Robertson was an official of the local government board for Ireland, and he had been entertained by an old priest who, finding his larder low, had prepared a large pancake an She then places it in an oiled baking inch thick, swimming in grease, for his guest's supper. Sir Henry, with respect for his digestion, slipped it intoa pocket containing two leather bags, and then mailed one of them at the village post office. Upon finding a convenient ditch in which to deposit the pancake, he looked in the bag and found it full of papers. He had mailed the pancake to the office of the government board. Presently he received an angry letter from headquarters, inquiring for what purpose the contents of the pouch were forwarded. "I did not wish to give away my carelessness," says Sir Henry, "so I headed my reply, 'Failure of the potatocrop-sample of food consumed by small farmers in the west.""

used for calf feeding, while others find that the calves scour badly. For this latter group, red clover seems to give much better results. It has been argued by some that if alfalfa is available from the beginning, there is less danger than if it is first fed after the calf is two or three weeks old.

Silage is a satisfactory calf feed if fed in moderation and care is exercised to remove all moldy portions. Calves at the Iowa State college dairy farm have shown more rapid and more economical gains when silage has been included in their rations.

Various figures have been given to indicate the feed requirements of a calf to six months. The following are from Eckles and are the average of the rations of seven calves: Whole milk, 360 pounds; skim milk, 2,804 pounds; hay, 270 pounds; grain, 113 pounds.

Muskmelons require warm soil and a great deal of fertilizer.

Sunflowers are ornamental and the seeds make good food for poultry.

Successful dairymen find the silo is an essential on farms where 30 or more cows are milked.

Potassium iodide fed to pregnant ewes will keep the lamb crop practically free from goiter.

An oil-can, wrench, or hammer at hand is worth two or three in the bush-or fence corner.

Sufficient live stock should be maintained on each farm to consume a considerable portion of the legumes raised.

Young, growing chicks need shade and free range, plenty of fresh water and proper food to make best profits for the owner. * * *

* * *

A satisfactory type of portable house is one that is 10 feet wide, 12 feet long. The front should be about 7 feet high with the back 41/2 feet high. * * *

The first feed in the morning is generally scratch feed, which is fed in the litter. The sooner this is fed in the morning the better, for it encourages the hens to get off the roost.

Don'ts for Home Builder.

Don't permit yourself to be deceived about what you can afford. A tabby cat cottage is better than a mansion white elephant.

Don't fail to acquaint yourself with ways and means of getting full preliminary information. A dollar's worth of postage stamps may save \$900 worth of grief.

Don't be disturbed when your friends tell of the cheap homes they were able to build years ago. Mark the lesson to build now and gain likewise.

Don't allow yourself to feel that you can build without a good set of plans. The missus knows that even the best dressmaker uses a pattern. Don't imagine that the builder and contractor can work without a fair profit.

Don't design or consider the construction of fancy fixings unless you are very sure of your ground. Most "period" houses are only exclamation points after all.

Paying for a Home. "Although it is not generally thought of, the average American home is bought on comparatively small payments. It is a good plan not to think too much of the lump sum involved in the building of a home, but rather of the fact that the lump sum is made up of small sums. Your ability to buy rests in your ability to pay the smaller sums at stated intervals.

Brick House More Durable. A stone house is not so durable as one of brick.

from London to New York in 46 hours. and from London to San Francisco in four days were described here to Maj. Gen. Sir Sefton Brancker, director of civil aviation.

London .-- Plans for an air service

The project, which somewhat resembles the French plan described recently in the Christian Science Monitor for boating airdromes in mid-Atlantic, proposes raftlike ships about 800 feet long by 120 feet wide, which would remain unanchored some 400 miles apart. Seaplanes alighting alongside would refuel through pipes. At first it is intended to use machines carrying ten passengers at £125 each for a trip to New York.

Buried Bonds Found

Toledo, Ohio,-Twenty-six registered Liberty bonds of the par value of \$14,-150 were found recently by a laborer in a glass jar buried several feet in the ground near Sylvania. The bonds range in denomination from \$50 to \$1,000 and are thought to be the loot of bank robbers. The bonds, together with the glass jar and the wrapper, will be turned over to federal authorities here.

Preacher Fined Speed Sermon for Violation

New York .- The Rev. Arthur Baggerly, who occupies the pulpit of the Methodist Episcopal church at Quogue, L. I., on Sundays, fulfilled the terms of an agreement whereby he obtained a suspended sentence on a charge of speeding in the Yonkers city court.

The clergyman was released by Judge Gorfinkle on his promise that in his next sermon he would urge his flock to obey the speed laws. Doctor Baggerly did not make speeding the text of his sermon, but he told of the Yonkers incident, and added that "some people have to learn by experience." He said his lesson had been with his arrest on Central avenue, Yonkers, and that in the future he would carefully respect the speed regulations. He asked his congregation to do likewise and thez passed on to his religious discourse.

year.

All Hens Show Decided Preference for Wheat

A recent test at one of the state experiment stations provided certain amounts of various feeds for the hens, and what they left was carefully weighed back in an effort to see which foods the hens preferred naturally.

Almost all the hens showed a decided preference for wheat, which is generally used as a poultry feed. Kaffir stood next in popularity, followed by corn and cornmeal, but oats, bran and sunflower seeds did not prove very popular. Alfalfa leaves were also passed by pretty generally.

A similar test showed that the use of either beef scrap or sour milk makes the hen's egg record at least twice as good as though she were fed no animal feed whatever, and that sour milk is slightly better than beef scrap for this purpose, in addition to being cheaper and easier to get on most farms.

Proper Care of Poultry

Is Apparent in Autumn Now is a time when the good care of poultry shows up. The flocks which have been underfed through the summer are not ready for winter laying. The pullets which have had a balanced ration have developed plenty of vigor. The poultry keeper who has neglected his flock cannot hope to make up for lost time. The best of rations will help to improve the poorly-fed flock, but they will never equal the birds that have made a rapid normal growth from the start.

Dispose of All Fowls

Weak and Lacking Vigor Cull all hens that are sick, weak, inactive, lacking in vigor, poor eaters, with shrunken, hard, dull or whitishcolored comb; small spread or distance between rear end of keel and pelvic bones; full, firm, or hard abdomen; and those that have molted or begun to molt in August or September. In breeds having yellow legs and skin the discarded hens should also show

IC-Paul's Preaching and Its Effects. I. In the Synagogue at Antioch in

Plaidia (vv. 13-16).

From Paphos Paul and Barnabas. with their companion Mark, went northward to Perga. Here Mark, for some reason, perhaps because of hardships, went back. He was ready to go again when they started on their second journey, but Paul would not give his consent (Acts 15:38-39). Before Paul's death he testified in Mark's favor for he had found him profitable unto him for the ministry (II Tim. 4:11). From Perga they went to Antioch in Pisidia, and here they entered the synagogue on the Sabbath day. From this we see that though Paul was sent to the Gentiles, he did not depart from the order of beginning with the Jews.

II. Paul's First Recorded Sermon (vv. 17-41).

This sermon is worthy of careful study. In its analysis we find four parts:

1. Historical (vv. 17-23). In this section we see how Paul, in a conciliatory way, led them gradually through a series of changes in which God had dealt graciously with them, finally giving them Jesus, His Son.

(1) God chose and exalted the people (v. 17).

(2) He delivered them from Egyptian bondage, and led them through the terrible wilderness (vv. 17-18).

(3) He destroyed the Canaanitish nations, giving their lands to the Israelites (v. 19). (4) He gave them judges as their

deliverers when distressed by surrounding nations (v. 20).

(5) After they had selfishly chosen a king, He rejected the dynasty of Saul, and chose David, a man after His own heart (vv. 21-22).

(6) Finally it was God who from David's seed raised up unto Israel a Savior, Jesus. This demanded proof, which is given in the next section.

2. Apologetical (vv. 24-37). That this Jesus is the seed of David and therefore the promised 'Messiah, he proves by three lines of argument:

(1) The testimony of John the Baptist (vv. 24-25). John disclaimed all power as their

4:7

An interesting word picture of millinery modes in South Africa is given in a bulletin of the Retail Millinery Association of America by Mme. Amy Adams. Among other things, she tells of the use of ostrich feathers by "smart" women there, some of these plumes running nearly a yard in length. "Milliners in Cape Town and Kimberly make most attractive displays," she writes. "They also take the greatest possible pains to suit the features of their clientele, and build the hats accordingly. No one seems to wear a

home-made hat, as there is no attempt to instruct the amateur to make her up here in the winter?" asked a visitor own chapeaux. The result is that the to a remote Scottish course of his cad-'tout ensemble' of an afternoon gather- die. "Naw, sir. Verra seldom," he reing is surprisingly smart. "Shapes are identical under the frost, and if it isna frost it's rain, and shadow of Table mountain with those if it isna rain it's wind."

worn in New York, but they seem more lightly wired and of a softer buckram. Just now, in the height of their summer, very light colors are in vogue. These are usually faced with dark silk, or even velvet, which serves to give a little shade in the glaring sunshine.

"The South Africans believe in supporting home industries, so that really magnificent ostrich plumes, at least 34 inches long, adorn the more 'dressy' hats. They circle the crown completely and drop down the right side. Each flue and tip of these plumes must be perfect and the long blades sewed or arranged by a master hand. No apprentice can manage them. With specially designed hats nothing can achieve more flattery than the white plumage which is so popular. Horsehair or very light-weight straw is the material of their foundation."

Moldy Butter Loss Always Avoidable

Creamery Operator Must Apply Most Diligent Effort.

"Moldiness in butter is absolutely preventable by any creamery operator who is willing to apply diligent effort," says Harold Mack, bacteriologist for the division of dairy husbandry of the University of Minnesota.

"Molds are living plants and must be present and alive to do any damage," Mr. Macy adds. "If they are excluded or destroyed there will be no moldiness of the butter."

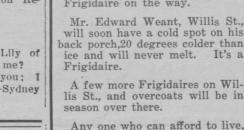

Molds grow luxuriantly in sour cream or buttermilk. If the buttermilk tank in the creamery is emptied every few days for cleansing and sterilizing, and if farmer patrons of the creamery would use two sets of cans, one for carrying their cream to the plant and the other for transporting buttermilk back home, the university bacteriologist says a tremendous forward step would be taken against moldy butter. Coupled with these precautions the vats of cream should be pasteurized, and the pipes and pumps through which the cream passes should be washed and sterilized daily. Tubs in which the butter is packed should be cleaned with steam and paraffin and lined with treated liners and circles. By "treating" is meant boiling them in saturated salt brine solution or soaking in a formalin solution.

Moldy butter is costing creameries of the country many thousands of dollars. One small Minnesota creamery which ships about 35 tubs a week was responsible for a loss of more than \$1,000 because its butter was extremely moldy when it reached the market.

Overfeeding Calf Will Impair Its Digestion

It is quite customary to feed whole milk to a calf for a period of three or four weeks. If the calf is not in a good physical condition at that time, whole milk may be continued for a week or two longer. Care should be exercised at the beginning to not feed the calf too much, especially milk testing high in fat. Two or three pounds at a feeding twice a day is enough to start with. Even with this small quantity, which is inadequate to nourish the calf properly, it is well to dilute it a little with warm water if it is from a cow testing 41/2 to 5%. It is better to start with too little and gradually increase the calf's allowance than to overfeed and produce scours, for whenever a calf's digestion is impaired it requires considerable time before it becomes normal. More calves are overfed at the beginning than are underfed.

After the calf has reached the age of three to four weeks and is making good normal growth, a little skim milk may be added to the whole milk. This process can be continued for a week, increasing the skim milk and reducing the whole milk until the calf is placed entirely upon skim milk. At that time a good normal calf would be taking from six to nine pounds of milk night and morning. If milking is done at noon, it is a good practice to feed

ed foods.

and every 3rd. Friday in each month thereafter, at Sarbaugh's Jewelry Store. Mr. Bell, member of the firm, who is a registered optometrist, and who was associated with Mr. Kefau-

See it on Demonstration

deliverer, and pointed to Jesus as such. (2) The prophecies of Scripture were fulfilled in their rejection and crucifixion of Jesus (vv. 26-29).

(3) By His resurrection from the dead (vv. 30-37).

Having proved Jesus to be the seed of David, he proceeds to follow the doctrinal teachings growing out of such proof.

3. Doctrinal (vv. 38-39).

The great doctrine derived from this proof is justification by faith, the very marrow of the gospel.

(1) The ground of justification is by Jesus. He took our place as a sinner that we might have His place as sons (II Cor. 5:21).

(2) Who are justified? Those who believe in Him.

(3) From what is one justified? All sins. The one who believes in Jesus is freely forgiven. His sins are all blotted out. This is the missionary message for all times. May we strive to get our pupils to believe on Him. (4) Practical (vv. 40-41).

The application of this sermon was a warning lest the judgment spoken of by Habakkuk should fall upon them. III. The Effect of the Sermon (vv. 42-52).

1. Many of the Jews and proselytes asked to hear these words again (vv. 42-49).

Almost the whole city came to hear the Word of God the next Sabbath. This great crowd incited the jealousy of the Jews.

2. Open Opposition (vv. 50-52). This jealousy could not long be restrained. It broke out in open opposition. The persecution became so violent that Paul and Barnabas were expelled from the city. This persecution was answered by Paul's rejection of the Jews and his turning to the Gentiles.

3. The disciples were filled with joy and the Holy Ghost (v. 52).

Jean Paul Richter Said:

"The life of Christ concerns Him, who being the holfest among the mighty, and the mightiest among the holy, lifted with His pierced hands empires off their hinges, and turned the stream of centuries out of its channel, and still governs the ages."

God Must Lead

Water is the greatest necessity of life, though God must lead us into the wilderness before we understand it.-Evangelical Teacher.

Why has the fragrant musk lost its scent? This is the question which many English florists and gardeners have been asking and wondering for 30 years. Formerly this little flower was among the most fragrant in the botanical records. It was originally found by David Douglas in 1826 growing on the margins of the Columbia river, and was exported to various parts of the world from there. When discovered it was sweetly scented. In 1877 the musk was hybridized in England, and although much larger flowers were produced by this artificial method of culture, the flower was often devoid of fragrance. One theory is

time. Only in one instance has an odor been recently ascribed to the English musk, and that was in 1917, when the earl of Waldegrave sent a few rare specimens to the Royal Horticultural society in London. Although only seven years have elapsed since the earl made his report, the same plants, unmolested and untransplanted, have already lost their scent.

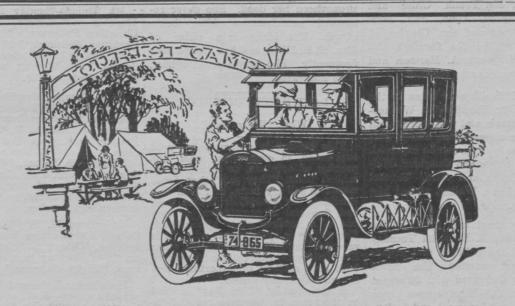

that the loss of scent dates from this

In addition to the hybridization theory of the loss of the musk's fragrance other ideas have been advanced to account for the discrepancy. One is that the human sense of smell is no longer so acute as formerly and cannot register the flower's odor. Another theory is that the leaves of the musk 50 years ago were very hairy, but after transplantation in alien countries the hairs were lost and with them the scent.

The idea most endorsed by the English botanists, however, is that essential oils, conducing to the flower's fragrance, have been lost in the process of acclimatization

Guarding Our Animals

The vigilance of the United States Department of Agriculture was impressed upon Thomas A. Fife, of Mishawaka, Ind., when two deer shipped to him from Canada were recently held up in Detroit by a United States government veterinary inspector for the lack of a certificate from a Canadian official veterinarian. Government regulations covering such shipment require that the animals be accompanied by a certificate stating that the area from which they come is free from contagious diseases and has been so for a period of 60 days immediately preceding the importation. The certificate must be signed by a veterinarian of the Canadian government.

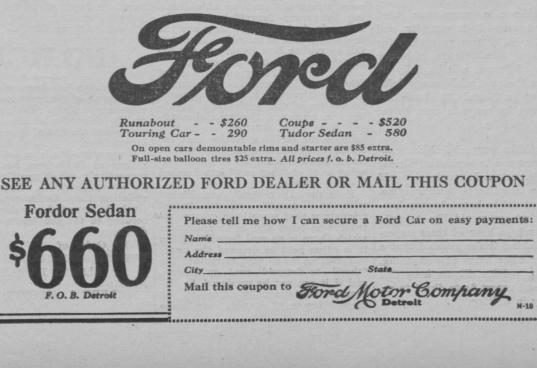

The Tourist Camps Invite You!

Thousands of them, hospitable and friendly, play a big part in the vaca-tion joys of thousands of families every year.

Take advantage now of this interesting, economical way to travel! Get into your Ford and go_far away from the every-day haunts and the working grind! All the family will enjoy the outing; everyone will be healthier, happier and better for a change of scene and life in the open.

No other car requires so small an investment as the Ford; none offers you such value for your money.

3-13-tf the calf three times per day.

Potato Growers Making War on Colorado Beetle

The Colorado potato beetle, like a bad penny, never fails to come back. Potato growers have become so used to fighting this pest that control measures are now a routine procedure. Sometimes small growers or backyard gardeners neglect the application of arsenic to their plants, and the usual result is loss of the crop.

As a liquid spray, four pounds of arsenate of lead to 100 gallons of water may be used. As a dust, a mixture of equal parts of arsenate of lead and hydrated lime has given good results. Growers have found that a mixture of one part of calcium arsenate to two parts of hydrated lime may be safely used with satisfactory results .--Dr. Frank H. Lathrop, South Carolina Agricultural College Entomologist.

Acid soil eats away profits. . .

Barium carbonate mixed with fresh hamburger makes the best bait to kill rats. . . .

Logged-off lands can be made to produce satisfactory crops under proper management. . . .

It is good practice to feed the pigs liberally for several weeks just before and after weaning them.

The best dust to keep off striped cucumber beetles is composed of calcium arsenate mixed with land plaster.

General control measures are more important than medical treatment for avoiding poultry losses due to intestinal parasites.

In one year New York city uses, at the estimated wholesale value, more than \$184,000,000 worth of milk and dairy products.

Most of the early lambs should be on the market before they are troubled with worms. It is the late lambs, those which go on the market during the last part of June and in July and August, which need to be treated for worms.

TANEYTOWN LOCALS

Items of news from town, or vicinity are always wanted for this column. Especial-ly accidents, sales of real estate, fires, im-portant happenings, visits to or from the community social events, and all matters of general interest to those at home, and away from home.

Theo. C. Fair and family, of Carlisle, Pa., visited Calvin T. Fringer's, over the 4th. and 5th.

Read the School Board proceedings, in this issue, for information concerning the new school building for Taneytown,

Mr. and Mrs. David Baughman, spent Sunday with their son, Charles Baughman and family, at New Windsor, Md.

Mr. and Mrs. Victor Zepp and Mr. and Mrs. Geo. H. Mitten, of Washington, visited at Roy B. Garner's and Walter Hape's, over the week-end.

Miss Nannie Buffington, of Baltimore, who is spending part of the Summer in New Windsor, visited Taneytown from Thursday until Sunday evening.

Wm. M. Ohler, Sr., has sold his Keysville road property, including stock and equipment, to a man from New Jersey, who will take possession about August 1st.

The Fourth was extremely quiet in Taneytown, and there was very little one of the hottest of the Summer. closing of business places. Even fire crackers were scarce. It was an oppressively hot day followed by an electrical storm at night, but not much rain.

It is reported that the Fire Company will not again hold carnivals of the sort held here the past two years. but will hereafter conduct their own. This will be a popular decision, and we predict will be more profitable to the Company.

Warning notice is given in this issue by The Burgess and Commissioners, calling attention to the common practice of running bicycles on our sidewalks, and operating autos with open cut outs. Arrests are promised. The practice ought to be broken up.

Mr. and Mrs. John Sarbaugh, accompanied by Mr. and Mrs. Harvey T. Ott, left early Sunday morning, on an auto trip to places in Canada, and Buffalo and Niagara Fall, N. Y. They expect to return home Saturday or Sunday by way of Erie and Pittsburg, Pa.

Alex B. Blanchard, of N. Y.,' well known here recently attended the International convention of Rotarians held at Cleveland, Ohio. Mr. Blanchard is an enthusiastic rotarian, and is now more than ever inspired by the great convention at which there were 12,000 delegates. He also spent a few days in Pittsburg.

Justice Hutchins, Westminster, last Friday. Both were adjudged guilty of assault, and each was fined \$15.00 and costs. The case grew out of a disagreement concerning the right to cut the wheat crop on Wm. H. Flickinger's farm, near town.

The following are visitors at Mrs. H. M. Clabaugh's home; Mrs. Clabaugh's sister, Mrs. McKee and daughter, Miss Brownlee McKee; Miss Isabel Lamberton and Geo. Lamberton, of Washington, and George W. Clabaugh of Omaha. Mr. Clabaugh and Mr. Lamberton drove in the whole way from Omaha by auto. This is the last Sunday. second or third trip of the kind Mr. Clabaugh has made, and he thinks he will not try it again.

A successful raid was made last week at the property occupied by a man giving his name as Oliver Grimm -the John Frock property, near Kump. About 1250 bottles of "homebrew" were found as well as 75 gallons of "mash." Perhaps the airplane scout "smelled out" the place, as we intimated last week. It is also reported that a trail from that source of supply-or some other source-led in the direction of Taneytown. "Smell" is getting to be dangerous evidence, and a risky thing to carry around.

Mr. and Mrs. A. C. Fink entertained a few friends on Saturday evening July 4th., in honor of their son, Donald, the occasion being his 11th. birthday. The early part of the evening was spent on the lawn with fireworks and later refreshments were served than the quantity. consisting of ice cream, bananas,cake, candy and lemonade. Those present, were: Mr. and Mrs. A. C. Fink, Mr. and Mrs. Mahlon Brown, Mr. and Mrs. C. O. Routson, Mr. and Mrs. J. R. Catzendafner, of Union Bridge; Mr. Harry Edwards, of Chambersburg, Pa.; Miss Mary Fink and Andrey Routson, Reid and Donald Fink and Ralph and Elvin Catzendafner. Ralph Catzendafner, of Union Bridge, is spending some time with Mr. and in mind, and report facts direct to us, Mrs. A. C. Fink and family.

Mrs. Jacob Uhler, of Trenton, Baltimore Co.; Mr. Frank Uhler and wife, of Dayton, Ohio, and Mrs. Henry Bertram and son, Charles, of Baltimore, visited the former's sister, Mrs. Margaret A. Harman and brother, James Shorb, recently.

Vernon G. Smith was taken to the Frederick City Hospital, on Wednesday of last week, and was operated on at once, for appendicitis, and is getting along as well as can be expected. Mrs. David Fogle and daughter, Mollie, Mary Smith and Mrs. Samuel Clingan, and son, Walter, visited him

A harvest treat was given at the home of Elmer S. Hess, on Tuesday evening. All the children and grandchildren were invited. The home was prettily decorated with Japanese lanterns. A delightful supper was served, followed by vocal and instrumental music.

Mr. and Mrs. Edward A. Kempfle and children, Edward and Catherine, Mr. and Mrs. Harry Kirchner and daughters, Dorothy and Helen, and Patrick Hagan, of Lancaster, Pa., spent the week-end at D. B. Shaum's. They were accompanied home by Miss Anne Kempfle.

The evidence is unanimous that the wheat crop-both quantity and quality—is better this year than for many years. The average, including all kinds of farms, will be fully 20 bushels to the acre, while many fields will run up to 25 and 30 bushelsand the quality range is even better

We would be very glad if those directly concerned in accidents, illness, or other important happenings, would report the exact facts to this office. We are apt not to hear of many happenings that we would like to publish, or perhaps hear of them imperfectly. Taking it for granted that a newspaper office hears of everything, is a wrong opinion. Please keep this preferably in writing.

taken to a drug store, and the Dr. called, who responded immediately, pronounced her dead. She never recovered consciousness after being struck. Mrs. Moore is a sister of Mrs. H. B. Miller and has visited here frequently. She leaves a daughter, Miss Margaret.

> LAST PAGE EDITORIAL. What "They Say."

This caption is a commonly used expression, in connection with the passing of opinions, or trying to establish facts. "They say" that Jones wants to sell his farm, or Smith is a candidate for sheriff, or Brown is in bad financial circumstances, or any one of a hundred other applications. The saying is synonymous with "it is reported" and "I hear so" and other like indefinite expressions connected with both matters of importance and

common everyday gossip. A variation of "They Say" is used by the press, in "common report," "it is rumored," "public sentiment" and "general opinion," all of which the lawyers say, is "not evidence," but may be unsupported talk without

much, or any, real foundation. "They say" may be used guardedly and with well supported authority, in cases in which the mention of names s not always wise, or would perhaps stand for a betrayal of confidence. It may be used to sound, or draw out, a source of information with the most excellent of intentions; or perhaps merely represents a way of expressing temporary forgetfulness of de-tails. In fact, we use "they say" so frequently and innocently that we fail to realize how important the ex-

pression may be in many cases. But, by far the greater use of "they say" is perhaps illegitimate and mischievous. It is the favorite foundation of the professional neighborhood nuisance, the scandal-mong-er. It is the stand-by egg that hatches the thrilling stories that entertain little conventions of congenial souls, who delight most in manufact-uring a lot of "they say" into finished horrible details.

It is the "they says" embellished with the "I think" and "I guess" trimmings that sometimes create real trouble in lives and communities, for which there is no real foundation. So it is often best to demand the exact information as to who constitute the "they"-to demand real evidenceand if it can not be produced, to dis-courage the story. "Sitting in" at these "they say" seances may make Paul and Senior Catechise, 7:00; Christian
