No. 14

CATTLE TEST COMPLETED.

About 16 out of every 100 head were Tubercular.

Dr. McCoy left his final report for Taneytown district at our office, last Saturday, covering two weeks not reported previously, as follows: 116 cattle tested with 12 reactors, and 306 with 34 reactors. The total number for the seven weeks work was 2316 head with 387 reactors, showing slightly over 16 percent with bovine

Dr. McCoy is full of praise for the co-operation in the district. There were some doubters and objectors, but he feels that the sitution has been met in the proper spirit, and while some of the losses have been heavy and very regretable, a large number of them have been beneficial, not only in the pay received for the condemned cattle, but for the weeding out of unprofitable animals. He predicts that the herds, and portions of herds left, will be all the more profitable in financial returns in the future, than in the past.

As to the retest that is part of the plan, supposed to be made within 90 days, he is unable to say what may be done along that line, especially in view of the state's financial problem that is given elsewhere in this issue. He is sure, however, that in the end a retest within 90 days would be more profitable—or rather a smaller loss—to farmers, than if delayed a year.

Which Side of the Road?

On account of the number of accidents to persons walking, especially at night, on the public highways, it seems to be safer for them to walk on the left, instead of on the right, side of the road. This would at least give the one on foot a front view of an approaching auto on his side of the

Most of such accidents occur when cars going in opposite directions are passing each other, when both swerve to the right, and in either case a foot man would be hit from the rear, if walking on the right hand side of the direction in which he is going. Autos, in passing each other, should be required to cut down speed to at least 15 miles per hour. Walking on the left side, however, would be of no advantage in the case of an auto passing another going in the same direction, as is very often done.

We think that pedestrians on the public roads should either be given quite a great deal more protection by the laws, or a separate sidewalk. "Unavoidable accident" verdicts are quite too common.

Twentieth Wedding Anniversary.

On Monday evening, Sept. 28, Rev. and Mrs. Thurlow W. Null celebrated the 20th, anniversary of their wedding in the presence of nearly 200 of the occurrence was that the house will permit. guests, at their residence near Har-

The original ceremony was performed at the home of the bride's parents, Mr. and Mrs. William Witherow, near Taneytown, by the Rev. D. J. Wolf, pastor of Grace Reformed Church, Taneytown, assisted by Rev. W. G. Minnick, of St. Paul's Lutheran Church, Harney. The attendants were Misses Daisy Witherow, now Mrs. J. E. Bercaw, Cincinnati, Ohio, Nora Hess, of York, and Messrs Charles Witherow and Arthur Wantz. The wedding march was played Miss May Price, of Westminster. Of the 175 guests present 20 years ago, 42 have entered into eternal rest.

On Monday evening, Rev. and Mrs. Null, attended by Miss Nora Hess and Mr. Arthur Wantz, entered the large living room to the music of Lohengrins wedding march, played by Mrs. Stanley Staub, Littlestown. Rev. L. K. Young, of St. Paul's Lutheran Church, read the prayers and pronounced the benediction, after which congratulations were received.

The male quartette of Littlestown sang a number of pleasing and apsang a number of pleasing and appropriate selections. This quartette is composed of R. H. Wilson, Stanley Staub, Luther Kohler and Rev. M. Kamerer. Mrs. Charles Stambaugh recited "When the Train Comes In," and Rev. Kamerer, "Any News."

Mrs. Null wore a black lace gown, and Miss Hess, grey silk. The following young ladies served refreshments: Misses Romaine Valentine, Gladys Haines, Elizabeth Lambert, The Mary Holm and Evelyn Zimmerman, Mary Hahn and Amelia Null.

Mrs. Null was assisted in receiving by Mrs. E. S. Wolf, Mrs. Raymond Wantz, Mrs. Albert Clabaugh, Mrs. George Hess and Mrs. Harry Clutz. Many beautiful gifts in china were

Price of Wheat Lower.

The price of wheat is falling, perhaps partly due to the good corn crop and perhaps to reports from the great wheat producing areas of the world, indicating that there will be small fereign demand. The Canadian crop, especially, is abnormally large, and this has had a very direct influence on the Chicago market, which largely influences the wheat market of this country. Just now, it seems as though the early sellers, this year, will have the best of the year's market pdice.

The strike called last week for the bituminous coal fields of West Va., was a distinct failure. Not a nonunion mine was closed, as the men deFIRE PREVENTION.

Carelessness Responsible for the Majority of Fires.

About 15,000 lives and nearly \$550,-000,000 in property were lost in the U.S. last year, by fires, many of them due to carelessness, or easily preventable cause. These losses do not represent the loss to business, or the suffering to victims or the endless sorrow of their families. Why not resolve to have part in cutting down this terrible toll of preventable fires?

The home of the careful, conscientious housekeeper seldom is visited by fire since she never permits the ac-cumulation of rubbish nor allows other obviously dangerous conditions to remain unattended to.

Every housewife should insist, in the interest of her family's safety. that the heating and cooking apparatus of the home should be made as free from danger as possible. She should see that the stove, if it is not of the built-in kind, stands at least eight inches from the wall and above the floor, and that the nearest wooden surfaces are protected with sheet metal or asbestos board. alone is used, there should be an air space behind it. Smokep-pes should have ventilated metal thimbles where they enter walls or partitions and should be at least eight inches from the ceiling or woodwork. Smoke-pipes containing accumulations of soot are likely to overheat and cause fire, and they should therefore be cleaned thoroughly at least once a

The housewife should never permit towels or other inflammable materials to be hung close to the stove to dry. Wet clothing, also, if placed too near a heater or open fire is likely to become ignited. Ashes should never be put into wooden receptacles. The coals are often very much alive when they are thought to be burnt out, and may smolder for hours and then burst into flame when no one is about.

Fires often occur in the kitchen from the ignition of grease or fat. Like oil fires, such blazes should be smothered with salt, sand or with a chemical extinguisher, since water only spreads them. A sauce-pan cover

is also effective when the fire is small "Children and matches" form a combination that is found with regrettable frequency among the list of fire causes. Practically all reports issued by the various state fire marshals contain this item. Matches of "strike anywhere" variety left lying carelessly about, instead of being kept in china or metal recepta-cles out of the reach of childish hands and the result is that the little ones find them and adopt them as playthings, too often with serious consequences. There was a little boy in a Massachusetts town who was alone by his mother while she attended to her marketing. When she returned she found him dead upon the kitchen floor, his clothing burned off his body. The evidence indicated clearly that he had been playing with matches. The only unusual feature

itself did not catch fire. 000 matches consumed in the United States every day, or about 486,000 a minute, and each one contains the possibility of a conflagration. That fact should always be borne in mind.

Matches, lamps, candles and other open flame lights are all exceedingly dangerous when used to illuminate a closet where there is easily-ignited clothing hanging about.

Small Barn Burned near Greenville.

The Fire Company was called to Charles Knox's, near Greenville, last Saturday evening about 5 o'clock. The run was made in 8 minutes after the alarm sounded, and a good working force of firemen attended. A straw stack first burned, setting fire to the barn which was completely destroyed, along with some hay and wheat. The adjoining buildings were saved by the use of chemicals, and all danger from the fire was ended by

using water from the well.

Report has it that the straw stack was likely set on fire by children playing with matches. Unquestionably the Fire Company saved the dwelling and other buildings. Mr. Knox is said to have had about \$200. insurance on the burned property.

Wind Storm Rates Advanced.

Owing to the great increase in storm losses, and to the vastly increased cost of repairs and rebuilding, wind storm rates have been increased on farm buildings in the New England and Middle States, including Maryland. There has been no increase on property, other than farm buildings for the reason that it is only on farm buildings that the losses have

been greater.
Whether it is because wind damage is naturally greater in the open country, where buildings are large and not so well constructed, or whether farm buildings are not being kept in good repair, the rating officials do not state The increase applies on farm dwell-In the South, the rates are still higher than Maryland rates.

five strong colleges this season.

FINANCING T. B. TEST. The Problem Now Facing the State Administration.

The state is facing the proposition of financing the tuberculosis test of dairy cattle now under way in the state. The legislation provided \$125,-000 a year for the purpose for two years, but the first year's appropriation was exhausted as early as last May, and over \$100,000 of the second year's appropriation, beginning October 1, has already been spent.

Governor Ritchie, and Dr. Albert F. Woods president of the State Board of Agriculture are concerned Dr. Woods explains that advance into Carroll; only first place will do, and that is the goal for 1926.

The Dairy cattle judging team was composed of Butron Kephart, Taneynext year's appropriation has been could not with any degree of economy, stop at the point where the appropriation expired.

To pursue this policy, he declared, would result simply in permitting the infection to spread, nullifying in the meanwhile the work already achieved and making all the more expensive a gomery 2920, Kent 2895. With more training the Carroll team should step could be used. As the Federal Government pays part of the indemnity to the farmer, he declared, and its were a policy of stopping and start-

ing followed.

Previously it had been the plan of the board, he said, to cover the third paid to the farmer by the State by means of notes which could be de-posited at the banks. It had been the policy of the Legislature to redeem these notes, thereby saving the farmer from bearing a loss of two-thirds, instead of one-third. This plan Dr. Woods said, his board had been continuing.

Statistics had shown, Governor Ritchie declared, that the State had something like 194,000 head of cattle and agricultural authorities had estimated that the tubercular ones among them would amount to ten percent. Efforts to eradicate the infection would cost in the neighborhood of \$21 a head for all the cattle in the State, it was estimated, and a program was outlined along these figures. It is altogether likely, the Governor serted, that the board found more tubercular cattle than was thought at the start to exist among the Ma-

Rev. and Mrs. Ness in New Home.

Before leaving for their new home in Arendtsville, Pa., Rev. and Mrs. M. E. Ness favored the editor of The Record with a very nice letter conveying their thanks for courtesies received, etc., and we desire to publicly extend like greetings. We shall miss them, along with the entire community, for their stay in Carroll County has been one full of genuine good deeds and helpfulness. The Arendtsville charge is to be congrat-

ulated on its wise choice. A brief summary of Rev. Ness's pastoral work is as follows; baptized 56, confirmed 52, married 29, funerals 43; accessions by letter 19, by profession 10, total added to membership The 27th. session of Blue Ridge 81. Raised for congregational purposes \$15,931, for Benevolence \$8554, paid on Forward Movement \$4000.

Statement Time.

BUSINESS PHILOSOPHY.

A writer in the Philadelphia Ledger emphasizes the value of savings accounts for accumulating a competency for old age, and says there is no secret about it how it can be done.

The savings account must be a fixed charge against the income, whatever the latter may be—just like rent, taxes and the grocer's bill. Ten or 15 percent of one's income is a reasonable amount to set aside, possible, in order to do the subject for saving. It is totally a question of will-power, perseverance, patience-

Ten or 15 percent of income may not appear a large sum to represent a year's saving, but it must be remembered that at the end of the year there space possible, but not always on first page, on account of its limited space. will be more in the savings account than the money actually laid aside—the page, on account of its limited space.

STRIKE THREATENED ON WEST, MD, R, R.

Enginemen and Firemen Are Now Taking a Vote.

A vote that is now in progress with enginemen and firemen on the W. M. R. R., as so far recorded, favors a strike within 60 days, unless their demand for an increase of 5 percent in pay is met. Under the new demand the enginemen would receive a minimum of \$7.20 a day.

It is held by some that even should

the vote be favorable this does not necessarily mean that the strike will go into effect, but at first, at least, indicate only that the demand for increase will be formally put up to the

labor, but this strike failed and a thousand or more men lost their jobs permanently, as the shops have been working normally under the contract system.

Another Auto Accident Victim.

Frank McDonald, 28, Mt. Airy, died at his home Saturday morning from concussion of the brain, sus-tained in an automobile accident on the Baltimore pike at Ridgeville, Saturday morning about 2 o'clock.

McDonald and his wife were returning to their home in the machine of Mr. and Mrs. Frank Lewis, also of Mt. Airy, from a dance, held at Glenelg. As they neared the scene of the accident, they saw what they thought to be a machine coming from an opposite direction. Instead, however, the machine was parked and was a truck belonging to a Baltimore baking firm. The machine had broken down and was parked on the wrong side of the road transferring its load to another truck, it was said. Lewis, who was driving his auto-

mobile, pulled over to the right of had too many clothes and the weight truck, with the result that his car of them was on the waist, with furth-plunged down an embankment and er evil physiological consequences. plunged down an embankment and ran into the porch of a tenant house belonging to Justice Clarence M.

Murray, Ridgeville.

McDonald was removed to his home and medical assistance rendered, but he died of his injuries Saturday morning at 10 o'clock. He is survived by his wife and two children, one of whom is about one month old. The other occupants of the machine

were only slightly injured.

The accident was investigated by
State Officer Parker who placed James Bruce, the driver of the bak-ery truck, under arrest for parking on the wrong side of the road. At a subsequent hearing before Justice Murray, Saturday morning, Bruce was found guilty and fined \$10 and costs.—Frederick News.

Rev. E. R. Hamme, Silver Run, and
Miss Eva Logue, Smallwood.
The Pollica will also Oct. 11

The Rallies will close Oct. 11, at the P. Church, Westminster, at 2:30. All the Societies of the County are invited to this session. A real treat is in store for those who attend. Don't miss it. Watch the Record for further information.

DROUTH STILL UNBROKEN.

The Entire State Facing a Serious Water Famine.

The water supply of Frederick city is the lowest it has been, for years. Only twelve feet of water is in the reservoir, the normal capacity of which is thirty-five feet. Part of the 11 acre basin is dry and the water is confined to the deepest portion of the dam.

The use of water for sprinkling to look after all leaks, and to save water in every way possible. The situation is also serious at Middletown, Brunswick, Emmitsburg and

other county towns.

Both in Frederick and Carroll Counties, all streams are lower than Several years ago the shopmen went in a strike against contract labor, but this strike failed and a thousand or more men lost their ich.

that the rain storms coming from the northwest, that usually extend southward, have not been doing so this summer. The deficiency in rain, for the year, is about 12 inches.

Unnecessary.

(For the Record.) Students of history, especially the history of reform by legislation, must have observed one outstanding and characteristic fact. It is that such legislation is almost invariably directed to correcting conditions which are correcting themselves. Here is a close parallel, and one which will

make the point entirely clear.

In the days before the war our comic periodicals were bent upon the reform of woman's dress, she had too much hair, and it made her headache. Corsets were all wrong, dangerously compressing her vital organs. She Her skirts were, moreover, so long that she trailed in microbes from the street. The exposure of her ankles, when it was necessary to raise her skirts, was calculated to harm the

public morals. But the woman of the period wears her hair short. The weight of her clothes is on her shoulders and not on her waist, and it is a light weight at that. She does not need a corset because she does not indicate the possession of a waist. She couldn't trail her dress in the dust unless she were something of an acrobat. And as for ankles, even calves have not depraved

the public morals. A quarter of a century ago there was altogether too much financial management in railroads. They were Monday, Sept. 28., 1925—Letters testamentary on the estate of Isaac N. Stoner, deceased, were granted unto Lana S. Stoner, who received the operating officers, and much the money earned was unwisely spent. Congress and the state legislatures had created regulatory bodies and manned them with politicians who did not know the first little thing about

railroading or finance. Today our railroads are upon the whole better run than those of any country in the world in the point of efficient and cheap service. Every penny spent is wisely considered. It s the competent operating men and not the financiers, to say nothing of the speculators, who conduct transportation. But the charges still brought against railroads are just as numerous and just as pertinent as the charges which the comic papers still bring against woman's dress Neither the politician nor the humorist has observed the change which is obvious to the rest of us. Woman Henry Klee, executor of John P. were never more sensibly dressed Klee, deceased, settled his first and anywhere than they are today in America, and the railroads were nev-

But it is a certainty that there will be at least two hundred bills introduced in Congress, at the opening of condition where the politician is more important than the railroad and the comic paper humorist a dearer necessity than the mothers of our children.

Man Killed by Auto.

Blinded by the lights of an approaching car, William F. Kint, of Gettysburg, ran down John A. Miller an aged farmer, on Sunday night, inflicting injuries from which he died while being taken to Gettysburg Hospital. Mr. Miller had been spending Sunday evening with a neighbor, and was on his way home on the Lin-coln Highway. He was walking on the right hand side of the road. Kint says he did not see him.

Maryland Tuberculosis Association

A clinic for diseases of the chest A clinic for diseases of the chest will be conducted in the Fireman's Hall, Taneytown, Monday, October 19, at 10:30 A. M. Individuals complaining of any of the following: Cough, expectoration of blood (spitting), tired feeling, loss of weight and appetite indigestion between appetite, indigestion, hoarseness, etc. should see their family physician and obtain permission to attend clinic at the place announced above.

About half of the statistics published, are incorrect, so you can believe it or not, that the average present citizen of the United States, eats two and a half gallons of ice cream in a year. Counting the ones who don't get theirs," there must be a lot of folks eating it nearly all of

Well, there is no election, this year, in Maryland, a fact worthwhile thinking about, and getting a little pleasure out of, while we can; but, just wait until we tackle next year's job? Perhaps our economy plan of biennial elections, will yet prove to be a big disappointment. We have the other. to experiment with a lot of new things before we can determine whether they are better and cheaper.

We may be getting wiser and better; we may be "improving" things | There is no discounting the wonderful and knocking out a lot of old-time idols; perhaps the "voice of the people" is actually getting so mob-like and noisy that leaders are not developing because they can't be heard, and not because they are not here, as in the former times? Just what Con- number of people, as long as land is gress does, this winter, may give us for sale at any price. In the last a hint as to how to view some of these more or less imaginable changes in our body politic.

Isn't it strange that we read about numberless auto accidents-killings. wrecks, run-down children, fires and explosions-all due to the modern fast-speed craze—and take it all as a sort of matter of course growing out of the increased liberties and pleasures of autoing; and yet, when some- in which the writer attempted to ridbody goes crazy, murders his wife, or does some dastardy crime, the tendency is not to blame it on drinking illicit booze, but on the iniquities of the Volstead act and the horrors cient three R.'s," making this comconnected with satisfying a nersonal liberty appetite with 'poot-leg?

Tax Reduction First.

on a big scale, National tax reduction legislation will have first place when Congress meets, but the plans of Treasurer Mellon and of the "administration" will not have clear sailing. There is to be a big reduction; but, how big? is the question, and what shall the items consist of? The administration will have its program, and the Democrats and near-Republicans combined will have theirs. There is a big melon to be cut, and politics will play a big part in how the cutting is to be done.

The Mellon adherents seem confident that the administration's plans are as far as the government ought | former, the tax-payers have a right to go, at present, and that the directions advised, is right. They claim that enough Democrats will take demands, and will pay for. Educatheir own views of the soundness of tion at private expense can be as ex-Treasurer Mellon's plans, and help put them across, irrespective of partisan play. They argue that the to turn out graduates who have a finances of the government may be seriously endangered if the cuts are ges, arts and sciences, without their too heavy and too extreme, and that being able to read, write, spell or this is a good time to make haste figure, properly, that is "personal slowly, cautiously, and with sound financial judgment. That this is no time to play a loose game, forgetting sound banking, by "playing to the no-accounts can read and write, is no galleries"-or, more pointedly speak- | argument whatever against mere ing—to next year's voters.

Some of the Democratic leaders, however, seem inclined to cry "Wall | public education is, how far the state Street," and to set up the argument should properly go, and how it should that the Mellon plan will largely re- go? We prefer fundamentals firstduce the taxes for the "big fellows" with "special emphasis on the three and leave it stay on the "little fel- R's," as California is said to favor. If lows." Of course, nobody knows, as this is "progressivism backward," let motor car.-R. H. Scott, president yet, what the details of the adminis- us go backward safely, rather than Reo Motor Company. tration's plans will be; but, there is forward like a crazy joy rider in an sure to be an anti-administration up-to-date auto. bill.and nobody knows what that will be. The first will have to be introduced, before the latter can be made

big bone for contention thrown out, and there will be a lively fight over Florida Real Estate Boom.

Just now, and throughout the coming winter the big subject throughout Florida, and to a large extent the entire east, will be talk of Florida real estate ventures. Miami and other cities in the state, from north to south, are now full of-and building more-real estate offices, and real estate salesmen are as thick as flies,

Florida is a great big state, and it in which there are good chances and real estate booms, there are wise both real, and imitation, "gold bricks," and somebody will get both kinds. Besides, what looks like "imitation," now, may become "real" after awhile. Nobody knows, exactly, what is going to happen down there.

This one thing is sure. Just because it is an investment in "Florida Real Estate," is no guarantee that it will turn out to be a profitable one. "Sure picked up, anywhere.

Anyway, Florida is preparing for a big winter season. Everybody is hoping, and fully expecting, that among the winter tourists there will be a big lot of investors, and the man with real money, who gets back home without his certificate of investment. will be lucky—or, perhaps unlucky.

The danger in the boom is not so much to those who go, see and study, as it is to those who stay up north and invest because of write-ups and glowing prospectuses supplied by mail by land Companies. It is just as possible for "land" to be "phony," as it is for "oil," and the "sucker" list is about as susceptible to the one as to

Our guess is that the whole business is pretty apt to be badly overdone-for the investors and for Florida. There is no doubt of the advantages and opportunities of Florida. future that seems sure. It is a fine state in which to live; but, it is yet to be fully substantiated that it is a fine state in which to earn money, by some real occupation-other than selling real estate—for an unlimited analysis, money must be made out of Florida, land through real industrial work-and, all of Florida isn't "near

The "Three R's" Ridiculed.

Recently, we read a lengthy article in a church paper on "Education" icule the statement that the state of California had "cut down the courses in its public schools from 27 to 12, leaving special emphasis on the anment; "Well, the West has always been progressive, and it now looks as if educational progressiveness will consist in going backwards."

We do not know what action California has taken with reference to her schools, but there is a vast difference between limiting public education to "three R's," and "emphasizing" them. In our humble opin- to their death in the Shenandoah and ion, "emphasizing" the "three R's" is a naval inquiry is under way at exactly correct. We take it that this Lakehurst. The naval air efforts means building on the strong foundations of a thorough knowledge of reading, writing and arithmetic, be- flight is another black mark on the fore going further. It does not mean these three, and no more, studies.

Education at public expense, is one thing; and education at private expense is quite another thing. In the to expect good foundations and as much more as the taxpaying public tensive, or as poorly founded, as the individual cares to have. If it cares smuttering knowledge of the langualiberty," and that is exactly what often happens.

The argument that criminals and reading and writing, as accomplishments. The essential consideration in

There are still some hard-headed folks looking after the quality of what is coming out of our schools, and a good many of these think French. At any rate, the present outlook is Music, Art, Athletics and some other that "tax reduction" will be the first things, hardly equal to a sound and deep instruction in such old time branches as reading, spelling, writing, grammar, arithmetic and geography.

Prohibition.

Prohibition suffered two severe setbacks last week. One was the candid admission of General Butler that prohibition enforcement in Philadelphia was impossible; the other was the equally frank statement of the Federal Council of Churches that the social consequences of prohibition since 1820 have been "unfavorable and disquieting."

As we have taken occasion to point out before, the great difficulty in atis wakening up. Like all other states | taining the proper solution of the prohibition question is the general lack of desire to find the truth. There has ventures and unwise ones. There are | been no subject to agitate the American public mind since the Civil War which has been discussed with so little patience and so much vitriol as prohibition. It is a subject concerning which most Americans have deep feelings. They are either for prohibition with all their hearts or they are against it with equal fervor. Their concern is not whether they are right or wrong, not whether there might thing" investments are not so easily not be much merit on the other side and much demerit on their own, but entirely whether their cause or the cause of the enemy shall prevail, right or wrong.

Certainly the present situation is far from satisfactory. Enforcement in most communities is negative. A great and intelligent group of the national body politic refuses to believe that drinking is morally wrong and declines to give to national and state enforcement statutes the respect and support which forms the sanction on which all laws rest.

On the other hand it is conceivable that the present situation, deplorable as it may be, is the best that can be had. It is conceivable that real prohibition enforcement would be tremendously expensive, many times as great as the present pretended enforcement costs, if not wholly unattainable. It is likewise conceivable that a repeal of national and state enforcement statutes, or drastic modifications thereof, would bring about a situation measurably worse than the

On the whole, prohibition and prohibition enforcement in America continue to be serious and agitated subjects. They deserve the best thought of our best minds. They deserve the same serious and dispassionate consideration that would be given to any other equally important subject.

But, above all, they deserve to be treated fairly. The present tendency to examine figures and statistics, to look into conditions and circumstances merely with a view of supporting preconceived convictions of what is right, must be done away with. Until we all, whatever our opinions now may be, are willing to get together on common ground and seek as American citizens to find the best answer to a trying and perplexing problem the present unsatisfactory conditions will

Bias and prejudice must be supplanted with reason and fairness if American is to wend its way out of the maze of prohibition.-Frederick

Bad Year for the Navy.

The Navy is having a year of troubles. Fourteen naval airmen went with the MacMillan expedition were futile. The failure of the Hawaiian year's record. The naval high command is busy explaining its policy in the air before the President's Air Commission, and now comes the loss of the submarine S-51 off Block Island.

Still another naval inquiry must be held to clear up the loss of the submarine and the members of her crew. It has not been a good year for the navy, and for Secretary Wilbur it has been a twelve months that at times must have caused him to look back with regrets to California and the more serene life of a jurist .-Phila. Ledger.

The credit business done in the past five years has been one of the most significant and interesting developments to a business man. Automobiles, houses, clothes-anything and everything can be bought on credit. No other era or country ever saw the parallel of the present American extension of credit to practically everybody who desires it. Men who could not have "hung up" the bartender for a drink in the old days are now considered good risks for a

Limit of Hard Luck

The birds sang sweetly, the sun shone brightly, and all was peace. "Hey!" suddenly called the man who paused on the bridge above the little stream, "How's fishing?" The fisherman on the bank sighed and looked up. "Rotten, my friend," he replied. "Do you know what? They aren't even getting away!"

With the Flag Above

We printed the other day some remarks on the last journey of the battleship Oregon to a quiet harbor in which the ship will be kept on exhibition, in comparison with the historic journey which it made around the Horn to join Sampson's fleet as war with Spain loomed on the horizon. The latter journey attracted no notice. The

and Glory Beckoning

as the earlier one progressed. A contributor to the New York Sun, one who was evidently one of the crew in the Oregon's historic race, tells of an incident which ought to be pre-

whole nation, hearts aflutter, stood by

When a warship goes into action, as it was feared the Oregon would be compelled to do with the Cervera squadron lying in wait, it is customary to clear the vessel of lifeboats and rafts, as splinters from them are as dangerous as shot and shell of the enemy. If the Spaniards had appeared the Oregon would have had thus to strip itself and a shot below the waterline would then have sent the entire personnel of the ship to Davy Jones' locker. The contingency caused considerable discussion on the ship. Finally one of the officers put the matter up to Captain Clark. He said:

"Captain, if we get into a fight with the Spanish fleet after casting all our boats and rafts adrift, and we get one good shot below the waterline, what is going to become of us?"

"Well," said Captain Clark, "a \$5,-000,000 coffin will be good enough for

That ended all discussion along that line. Every man felt that if the Oregon was a good enough coffin for Captain Clark it was good enough for him -if so it must be they would fight to the limit and go down with the colors flying to a glorious death for their country.—New Orleans States.

There is a peculiar and subtle and uite indefinable pleasure that comes a man when the woman he loves irst writes to him. Soever curt, so ever benal the letter, there is no matter. It is somethin; from her to him something altogether private and se cret; something she has set down for him to read something not to be shared with a sordid world.—From "The Rusp," by P. illins Macdonald.

Bear as Photographer!

A student of forestry was camping with two friends in the wildest part of Allegheny park. Taking his camera, he rambled off alone to look for picturesque subjects.

He had placed his camera on a fallen tree, and had gone some little distance to get a viewpoint, when he saw a black bear browsing amongs: some berry bushes. He was scared. and, forgetting his camera, sped back to his camp and companions. With them he returned to the spot, but, in the meantime, the bear had disap-

The camera was still on the log, but a plate had been exposed. When it was developed it showed the frightened young man in rapid flight down the trail. The bear, investigating the camera, had touched the trigger with

Sadler's Well

A question as to the identity of a person named Sadler has been suggested by a recent appeal, sponsored by leading men, for the restoration to the nation of the historic theater known as Sadler's Well. Sadler lived in the time of the Stuarts, and was a road surveyor and a property owner. One day some workmen, while digging for gravel on a piece of land belonging to him in Clerkenwell, came on an ancient well-one of the medicinal springs to which pligrimages were formerly made. The site at once became a popular resort. Sadler built round it a pleasure house, set in pretty gardens and groves of trees. He provided music and other entertainments, and in a short time the existence of the waters was almost totally forgotten.-Family Herald.

Coney Island Cannibalism

When daylight came and the sun woke the sleepers. Surf avenue was as busy as on an ordinary night. Throngs surged into the restaurants. and after eating those who were not in suits went to the bathhouses to get rooms for the day -New York Times.

A Vision of the Months to Come

The future of a pair of Humming Bird Pure Silk Hose is clear to read.

For months, they are with you through thick and thin-the "thick" of your stout little walking boots, the "thin" of your dancing

The slender ankles, tapered in knitting, lose nothing of their caressing fit, nor do the winsome colors fade with the seasons. Seamless underfoot, they remain throughout, the very sole of comfort.

Lady of vision, look months ahead when purchasing silk hosiery for yourself or for others. All the newest shades-frequently many weeks in advance of the mode.

\$1.50 Per Pair

Our Hosiery Departments features only the most dependable brands of hosiery.

CAPONS COMPARED WITH MALE BIRDS

That caponizing pays but that capons do not gain anywhere near what is claimed by some, is indicated by the results of an experiment conducted by the poultry department at South Dakota State college.

According to these claims, the capon should gain twice as much as a rooster of the same age and breed, but a 10 per cent gain is about the best to expect. The lighter breeds like Leghorns, do not really gain at all. Since chickens usually hatch late on the farm and since there is usually plenty of feed, caponizing will probably pay the farmer. The birds should be caponized when developing wattles and combs, or better when they weigh about two pounds in the American or medium-weight breeds. The capons can be shipped in barrels holding 150 to 200 pounds, during January and February, and bring a good price.

Two weeks before marketing, the capons should be put in close quarters and fed on fattening rations, such as milk, corn meal, bran, tankage, etc. Any combination like corn and milk is very good. During the time previous to these two weeks, the capons can be fed on corn and can be allowed to run with the pullets.

In dressing capons for market, only the soft feathers need be removed. The coarse feathers on the wings, tail, etc., may be left on. The capons must be dry-picked, if a good price is ex-

As capon feathers, especially white ones, are in demand and will bring from 85 to 90 cents per pound, the farmer can afford to keep them clean

and dry and the colors unmixed. To have capons mother little chicks does not pay. This means that capons have to be kept over winter. Three or four dollars are thus invested in them, whereas an old hen would do

Must Feed Hens Mash to Fill Summer Egg Basket

"Hens will not lay eggs in the summer unless they are supplied with all the mash they can eat," says Duncan H. Reid of the poultry department, University of Wisconsin. During the spring months, the wet ground and grass are full of insects which provide plenty of animal feed for the hens, but when summer comes the insects disappear and this lack of animal food must be supplied through the

A good ration recommended by Mr. Reid consists of 100 pounds of ground corn, 100 pounds of ground oats, 100 pounds of wheat bran, 100 pounds of wheat middlings, 100 pounds of meat scrap, and 5 pounds of salt. When milk is fed with the mash, the meat scrap should be cut in half.

'A hen should receive two ounce of grain a day and all the mash she can eat," says Mr. Reid. "The grain ration should consist of corn supplemented with 25 per cent wheat and oats. This is contrary to the general telief that corn furnishes too much heat. Tests have shown that the best results are obtained when this ration is used. The grain should be fed a little in the morning and heavy at night. The mash should be changed at least once a week. A lack of oyster shell during the summer months will cut egg production in half. Green feed, such as clover, when mixed with the mash, has a decided advantage even if the green feed is growing in the yard."

Poultry Notes

For some reason, not fully understood, thick, sour skimmed milk seems to have a greater value for hens than sweet milk.

The old idea of ducking and starving to prevent broodiness is not to be recommended where further egg production is desired.

Green feed at all seasons is a necessity for health and egg production. Large quantities of mangels and cabbages can be produced on a very small area.

Chickens, to be fed profitably, should first be kept growing during the growing season. To best accomplish this they should be given a varied diet of meat and vegetable protein.

Lime is the principal constituent of egg shells and hens should be provided with lime if they cannot gather it naturally. It can be given in the form of crushed lime stone, crushed egg shells, etc.

* * *

Many farmers begrudge a hen every bite that goes down her neck, and numerous early risers on the farm get up to feed the hogs before daylight to keep the hens from eating with them.

Poultrymen are finding out that hens will lay as freely without the company of males as with them. This fact permits the lessening of expenses by doing away with the roosters. It is also a fact that eggs that are infertile will keep much the longest.

Twelve Links in Clean Milk Chain

Healthy Herd and Careful Attention to Details Quite Important.

Contrary to a somewhat common belief, it does not require expensive equipment, high priced cows, or much extra work to produce clean milk.

With a healthy herd, kept in a clean stable and yard which can be kept clean easily, and with careful attention being given to details a milk can be produced, according to E. H. Farrington and L. C. Thompson, dairy specialists at the Wisconsin College of Agriculture, which is both highly nutritious and wholesome.

Since the reputation of many a farm and factory is based on the purity of its products it is quite important that all of the aids to clean milk production be known. The first consideration, the experts point out, is that of a clean herd. Good milk cannot be produced from diseased cows. A clean stable also aids immensely in the production of clean milk.

Must Exercise Care.

Good ventilation is also an important factor. It is quite important that animals secure plenty of pure fresh air since tuberculosis spreads faster and gains an easier foothold where fresh air is not provided in abundance. A dry barnyard and the removal of the manure some distance from the barn will aid greatly in reducing the number of flies which, in the summer, annoy the cows and the

The value of pure water, abundant sunlight, and careful feeding cannot be overemphasized according to the specialists. The matter of clean milking and clean utensils are intimately associated, for great numbers of bacteria may be introduced into milk from the bodies of the cows and from unsterilized utensils. Quick cooling of milk to lower temperatures prevents bacterial growth and aids in the production of better milk which will keep longer and make finer dairy products.

Prompt Delivery Necessary. After the milk has been produced under conditions which are as near ideal as possible it is important that it be delivered promptly to careful customers, Farrington and Thompson declare. They report that milk should be kept in cold water until it is loaded onto the wagon to go to the station

or receiving plant. Clean milk means fewer complaints, a better class of patrons, and a steady market for the product, the specialists

Various Crops Injured

by Tiny White Maggots Carrots, parsnips and celery are injured by tiny white maggots that bore in the roots and sometimes in the case of carrots completely honeycomb them with their burrows. Unfortunately we know very little about this pest, because it is a European insect that has lately come into this country, writes W Herrick in the Rural Yorker. In England a quart of kerosene thoroughly mixed with a bushel of wood ashes and distributed along both sides of each row of carrots has given fairly good protection, it is said. After the ashes have lain two days the oil is washed into the soil with water from a hose. It is doubtful if this remedy is always practicable in gardens in this country and it is somewhat doubtful if it will prove successful. It is, however, worth trying in a garden. It is also reported that Dutch gardeners in Holland are able to secure protection from this maggot by planting onions among the carrots.

The writes would suggest the use of tobacco dust containing at least 1 per cent of nicotine. Such tobacco dust can be obtained now from reputable manufacturers. It should be distributed along each side of the plants in a row, using about one pound to 25 or 30 feet of plants. It should be applied as soon as the plants are two or three inches high.

Alsike Clover Pastures

Unfit for Some Animals Most farmers know that whiteskinned animals pastured on alsike clover are apt to develop sores on the nose, ears and legs. Why this is. science has not been able to definitely determine, the nearest they can come to it is to say that it is a type of poisoning, says the Indiana Farmers' Guide. This poisoning seems worse when hot sunny weather follows a heavy dew. Professor Hansen, the weed expert of Purdue, advises that when it is noted that the sores are appearing, the affected animals should be immediately taken off the clover and

put on grass. While the danger of alsike poisoning is not sufficiently great to warrant farmers to avoid the growing of this valuable crop in areas where it is adapted, it behooves those who keep white-skinned stock to use care and judgment in pasturing it.

Sweet Clover Hay

Sweet clover hay that is well cured and not too coarse and stemmy is equal to alfalfa hay as feed for dairy cows and since it is generally conceded that alfalfa hay is superior to red clover hay for dairy cows sweet clover hay must be considered better than red clover hay. It must be remembered, however, that sweet clover hay must be well cured and not too coarse; the cutting from the first year's growth is most satisfactory.

MOTIVES OF MIRTH MANY AND VARIED

But Adults and Children Main Store, Hanover, Pa. Are Much Alike.

What do children laugh at, always and everywhere? Kurt Pinthus asks in Uhu (Berlin). They laugh because things are breakable. They laugh at smaller children whom they can trip up, and at the naughty pranks with which they disturb the normal order

of events. In general, we may say that they laugh from a feeling of superiority over the weaker or the injured; and they laugh whenever they can show themselves apparently superior to the all in a high state of cultivation. Two older persons in charge of them-perhaps by misbehavior before a teacher.

A child laughs from malicious enjoyment, from the triumphant consciousness of another's humiliation, from an impulse which the child knows is "naughty" by the traditional

As a result of the hindrances involved in our ordering of society, most grown-ups attain in early youth a mental level not too far removed from the child's. So that the laughter of adults, even though they have learned-or should have learned—to understand the traditional distinction between good and evil, springs for the most part from the same roots as the laughter of children.

The motives of adult laughter are mere variations of the things that children laugh at. The adult laughs at physical oddities or their imitation. He laughs because somebody else has fallen down or because somebody else has caused a second somebody to tumble, or because somebody who thinks himself in safe superiority goes sprawl-

The adult laughs, above all, at anvone to whom he himself feels superior and in whom some antisocial quality is represented with very one-sided exaggeration. Thus he laughs at Don Quixote, who forgets the world of reality while he plays at being a knightly hero in a world which no longer knows such heroes. In comedies he laughs at the greedy man, the vain man, the boaster, the timid man, and the sham-because in every situation these types show themselves to be exaggeratedly greedy, vain, boastful, timid or deceitful, and because the preponderance of these typical characters which dominate each like a kind of fixed idea leads to unusual and surprising situations.

Motors for Many Purposes

The Woolworth building in New York has a total of 1,200 electric motors, used for various purposes. One thousand of these motors are rated at one-eighth horsepower or less.

GLASSES

I wish to announce to the people of Taneytown and vicinity that I have made arrangements for

HUDSON & BELL, of Frederick, Md., successors of C. L. Kefauver to continue the Optical service which Mr. Kefauver gave in Taneytown. Next visit

FRIDAY, OCTOBER 16th., 1925. and every 3rd. Friday in each month thereafter, at Sarbaugh's Jewelry Store. Mr. Bell, member of the firm, who is a registered optometrist, and who was associated with Mr. Kefauver for some years has charge of the Optical Department, guarantees absolute satisfaction at reasonable prices. Appointments can be made before this date at Sarbaugh's Jewelry Store. We do all kinds of Optical repair work. Don't forget that our Watch, Clock and Jewelry repair department is the best.

CARROLL RECORD

CUTS COST OF HOME LIGHTS

Electric Illumination Expense Is Reduced Owing to Invention of New Lamps.

Recent reductions in the prices charged the public for incandescent electric lamps have disclosed that an electrically lighted home can now obtain a thousand candle hours of illumination for pretty close to 10 cents.

It is also brought out that in the thirty years from 1890 to 1920, the cost of lighting the average home by electricity dropped from 89 cents per thousand candle hours to 11 cents. This was due in large measure to a succession of inventions and discoveries, the outcome of patient laboratory research, each of which contributed to an increase in the efficiency of the incandescent lamp and thereby a reduction in the cost of illumination

There has not been a year in the span of three decades mentioned that costs did not drop noticeably, except since 1916. During the last seven years, the reduction has been but a fraction of a cent each year. Meanwhile the quality of light furnished has increased almost beyond comparison, as those who recall the old-fashioned carbon filament lamps, in which bamboo was used at first, will appre-

Three different styles of lamps were popular during this thirty-year period. The old style of sixteen candlepower carbon lamp was the most in favor from 1890 to 1905. In that year the Gem lamp was introduced, and the 50watt type of that kind of lamp was the most used. Then the Mazda tungsten lamps arrived. These were the result of Dr. W. D. Coolidge's discovery in the research laboratory of the General Electric company, of a method of drawing tungsten into flexible wire, so that it could be used for lamp filaments in vacuum bulbs. From 1908 to the present time the 40-watt Mazda lamp has been the most popular for general household lighting.

Few persons could afford to illuminate their homes brilliantly today if electric lights had not been improved and their initial cost, as well as the cost of current consumed, made comparatively low.

HOUSE KNOWN AS A TOWN

Brick Building on the Crossroads in Hunterdon County, N. J., Is Called Perryville.

On a crossroad in Hunterdon county, N. J., there stands a solid, lonely brick building which enjoys a unique distinction. It is a town, in fact, the town of Perryville, and has been listed on the map as such for more than a hundred years.

The building locally is also known as "Brick Tavern," having served mond, Fredericksburg & Potomac railthroughout its earlier and more flourishing years as a meeting place for farmers of the neighborhood and a resting spot for travelers on the post road that runs before its doors. It was under construction in September, 1813, when the first news of Commodore Perry's victory on Lake Erie flashed along the road and the building was christened "Perryville." A jug of whisky was poured over the green bush surmounting the rooftree by way of proper observance.

Because of the tavern's site on the east to west turnpike over which a great deal of the state's traffic passed at the time of its erection, the tavern of Perryville soon went on the man as a post where the stage coaches stopped, and continued to receive mail as a town for a considerable period after railroad service banished the horses and their clattering omnibuses. Even now the flavor of antiquity clings about it, although it has been appreciably modernized by its present own-

Hoop-skirts and copper-toed shoes were found in the old building when it changed hands fifteen years ago, and it boasts huge open fireplaces and mantels and doors of colonial design.

Ingenious Waste Paper Burner.

An excellent waste paper burner is hexagonal in shape and built of ordinary bricks so placed as to permit a strong draft to blow through it. It should be nearly four feet in height. Forty-eight bricks are laid at the foundation-eight bricks for every side. Fewer bricks are used in each successive layer, so that the burner is wide at the base and parrow at the top. The contents of waste paper baskets when dumped into this receptacle are consumed quickly and without the unsightly litter of charred paper and flying smuts, which usually accompanies the incineration of paper out of doors.

Back Yards Standardized.

Even back yards are standardized in Manhattan. Brown stone houses are as alike as so many peas, and so are the tiny yards in the rear. Those who put on swank call them "gardens." Everyone is a rectangle.

Film Instructs Children. Three thousand school children of

Gardner, Mass., have been impressed with the necessity of being more careful through the recent showing of the educational film, "Why Are We Care-

COBRA SPITS DEATH FROM FIFTEEN FEET

Jungle Has Many Other Deadly Denizens.

To end a controversy over the deathdealing effect of a "spitting" cobra at a distance of 15 feet, C. Emerson Brown, superintendent of the Zoological gardens, is in possession of additional expert advice that upholds his contention.

"Publicity given the purchase of the deadly collection of snakes which were brought here from New York has aroused doubt in the minds of a number of persons who have informed me in writing and by telephone that they do not believe the snakes are so deadly," said Mr. Brown.

"One man wrote me he would not be afraid to face the pair of 'spitting' cobras at a distance of 15 feet, without any barriers between them. Of course, I do not believe he would, but he won't be given a chance, anyhow," added Mr. Brown.

Mr. Brown then offered a letter from Raymond Ditmars, curator of reptiles at the Bronx zoo, in New York, who is reputed to be the greatest authority on reptiles in this country. The letter reads:

"The black cobras that spit poison are the most dangerous of reptiles and can spit venom 15 feet with deadly precision and effect. At that distance, poison hurled 4 feet high on the glass of a case containing the species has

clouded the glass. "This condition prevailed here recently, when the cobras sent you and the ones here in the zoo were exhibited for the first time to visitors. The glass had to be washed so the snakes could

be seen properly. "Regarding the inquisitive gentleman who would face the cobras at a distance of 15 feet, he should equip himself with a bucket of permanganate of potash solution to duck his head in

to counteract the effect of the venom. "Such an emphatic demonstration or lesson in natural history as he would stage might teach him something tangible about the ways of African cobras,

if he survived." The "spitting" cobra, like those in the zoo, are black, with red blotches on their underside, and the ones in the zoo are six feet long and about three inches in diameter. The snakes are in

specially constructed cages. Of the seven deadly cobras in the zoo, Mr. Brown says the green cobra of the Mamba species is the fastest snake in the world and strikes beyond its length in any direction with its head about five feet from the ground. The green snake is twelve feet long, has long fangs and is less than one inch in diameter. Mr. Brown added the green cobra strikes without giving a warning, and does not have to be "egged" to do it, either.-Philadelphia Record.

Better Train Handling

Passenger engineers are studying the effect of "taking up slack" in a long train by riding in the rear of such a train under a plan devised for better handling effected by the Richroad, according to Railway Review. In this way the enginemen are impressed by the fact that the handling of the train, which they thought performed with due caution from their cab, was attended with serious discomfort to those in the rear cars. The plan has worked out satisfactorily, not only from the actual physical experience of the enginemen's observations, but from the psychological factor which entered into the operation.

Had an Alibi

"Want to join the Legion, buddy?" asked a Legionnaire of a husky young man of about his own age.

"Can't; wasn't in the service." "Why weren't you?" the veteran demanded.

"My intentions were good," was the rather reluctant explanation. "I went to a recruiting office where they put me in a room and told me to take off my clothes. A doctor walked up to me, looked at me kinda hard, an' then thumped me on the chest. I wasn't in the habit of letting strangers get rough with me, so I thumped his chest -an' I didn't get out of the hospital until the war was over."-American Legion Weekly.

Nature Was Before Them

At Bronson, Minn., Charles Falk chose a rainy afternoon for butchering his fatted hog because the weather was not suitable for other work, and with the assistance of a neighbor the necessary preparations were made. When everything was ready the men proceeded to the pig-house to administer the stunning blow, but to their amazement found the porker dead near the door. It was found that lightning had killed the animal.

Oil Does Not Freeze

A very precious oil, suitable for aviation, since it does not congeal even at a very high altitude, can be extracted from crickets, says consular advices to the Department of Commerce from Algiers.

Recently about 18 tons of crickets were sent to Holland from Algeria. Part of this quantity was utilized for feeding poultry, and from the remainder the oil for aviation purposes was extracted and has apparently given every satisfaction.

CARD OF THANKS.

ELECTRIC ENERGY SENT BY WIRELESS

Makes Possible Operation of Vessels From Land.

Washington.-Electrical energy has een successfully transmitted by wiress through the use of inventions by the Italian engineer, Midali, according to reports received here from Turin through official channels.

According to these reports, the possibilities of this method of power transmission are boundless. In an interview published in Turin, Midali described the results of his five years of study in part as follows:

"The result obtained is that of transmitting electric energy in the form of alternating current, without excessive losses, but in reality the electric energy is not transmitted as such. The system transforms the electric energy emanating from any source in the form of alternating current, at frequency and tension generally employed in industry, into very short electro-magnetic waves of about one millionth of a centimeter. These waves must be of about the size of light waves, and have nothing in common with the Hertzian waves used for radio communications.

Energy by Vibration. "These extremely short waves, that ought to be called vibrations of the electrons, constitute the means by which the electric energy is transmitted to a distant receiving system, which in turn transforms them into electric current of identical characteristics of that used by the transmitting

"The electric vibrations created by the transmitting system travel in a straight line toward an ideal 'focus,' according to the directions imparted to them by the systems of condensers which form the aerial; they converge in a point in which the ideal lines of the aerial condensers of the receiving system must so converge. When this condition is not fulfilled, transmission cannot initiate.

"When transmission has begun, the position of the aerials and also that of the transmitting and receiving systems are no longer of importance and the system goes on working even if both stations change position. Drive Ship's Engines.

"No mass between the two stations can interfere with the functioning of

"The system also permits the transmission of polyphase currents. It may be foreseen that it will be used for electric traction, enabling electric trains to be run without drivers. Steamers may be operated from the land and electric power will be available even in localities where it cannot be produced on the spot or transmitted by wire.

"It will also be useful in radio communications, in which case the frequency of the current and the perfect dirigibility of the wave will permit synchronization of the stations and total suppression of disturbances caused by other contemporaneous transmissions."

New Lubricating Oil to Reduce Flying Accidents

St. Joseph, Mo.-Invention of a new lubricating oil for airplane motors, which, it is claimed, will enable transcontinental flights without a change of oil, was announced Saturday by J. A. Higgins.

The new lubricant, according to Mr. Higgins, is mineral oil castorized in treatment by molecular impregnation. The inventor declared the oil would make for greater safety in flying, by eliminating to a great extent stalling of motors, due to inefficient lubrication. He said that in a test the oil had been used during 351/2 hours flying time without draining the crank case.

Plan to Revive Old-Time German Military Bands

Berlin.-Efforts are being made to revive the old-time military bands which formerly were a popular part of every-day German life. In recent years they have given way to string orchestras and jazz bands. In the movement to bring the military bands back to their own, a monster concert was organized recently at the Stadion, when 20 bands played simultaneously under the direction of Prof. Oscar Hackenberger. More than 20,000 persons attended.

Men. Your Garb Must Be of Rainbow Hues

London. - Suits in subdued rainbow hues, backless waistcoats and pale-gray or fawncolored derbies are among the hot-weather novelties for men in the brighter clothes movement. A new Irish tweed, so lightly spun that it is nearly transparent, comes in dust color and also what is called French gray, with a thin stripe of pale blue and green. This material is much in demand for the flappy "elephant-leg" trousers now affected by young men.

The backless waistcoat is double breasted and is held in place by braces across the back. It is worn with an unlined loosely-fitting jacket.

For shirts "ice-colored" silk is the latest. The material is exceptionally thin, of gray, and expensive. ceptionally thin, of a bluish

One day a rent collector knocked getting a reply. Becoming enraged, he went back a fourth time, and in response to his knocking an urchin opened the door. "Where you been all day?" de-

manded the collector.
"I was out," replied the boy.

"Where is your father?"
"He's out."

"Where is your mother?"

"She's out.

"Well," said the collector, "I will just go in and sit at the fire until some of them returns." "But the fire's out, too," quickly replied the boy.—Victorian.

NO-NOX, THE NEW **GULF MOTOR FUEL,** PROVES THE **GULF CLAIMS**

The Gulf Refining Company report an unexpected sale of NO-NOX and customers are lavish in their praise of this new fuel. The Gulf Refining Company have been very conservative in their advertising of NO-NOX as they say they do not wish to "bull" their customers on this gas—they would rather its merits be discovered by their patrons—they are ready to stand back of the guarantee that NO-NOX will stop carbon knocks and that it contains nothing harmful to man or motor. An anti-knock or stop-knock fuel that really accomplishes its mission is worth the price to any motor-ist, says an officer of the Gulf Refining Company, as the average consumption of gasoline during the year is about five hundred gallons per car which figures, at three cents additional per gallon, the small sum of \$15.00 per annum. The added power efficiency is worth that, not to mention the saving in wear and tear on motor and chassis of insufficient combustion, etc. There seems to be no doubt as to the Gulf Refining Company having at last found the real remedy for carbon knocks.

Too Much Money

"You can always tell the newly married folks," said the postmaster. "Here comes a recent bride now." "How do you know?" demanded the

traveling man curiously. "See, she has a \$5 bill to buy a few 2-cent stamps with," returned the

knowing postmaster.

TEMPERATURES CAST WEEK IN ADVANCE

Study of Sun Makes Forecast Possible.

Washington .- The heat of the sun has a proven relation not only to changes in the earth's temperature, but to the variations in weather conditions in general, Smithsonian institution scientists have decided after experiments covering a long period. To increase the dependability of their observations, the experts hope to establish within a few years stations in various parts of the world where data can be gathered.

Through a series of papers dealing with experiments of its astrophysical observatory, the institution says "researches give clear proof of a connection between solar variations and weather changes, but show that the relation is a complex one."

Whether recent abnormal aspects of world-wide weather have been caused by solar conditions cannot be determined, because extended records of the past history of solar radiation are

Basis for Predictions.

Dr. C. G. Abbot, assistant secretary of the institution and the director of the astrophysical observatory, says that not only does the heat received by the earth from the sun appear variable, but that the changes can be predicted nearly a week in advance by looking at the sun through a telescope.

H. H. Clayton, who for several years was official forecaster of Argentina and recently has been collaborating with Doctor Abbot through study of the sun, has predicted, with what the institution asserts is very fair accuracy, the actual daily temperatures of New York city nearly a week in advance for more than a year.

For several years the work has been conducted from two observatories, one at Mount Harqua Hala, Ariz., and the other near Calama, in the nitrate desert of Chile. Both are in high, arid locations. To increase the accuracy of the observations improvements are being planned for the Chile station, while the Arizona observatory is to be moved to a higher location on Table mountain, California, near Los Angeles.

Stations in the Eastern hemisphere are needed and Dr. Abbot will go to Asia this fall and, with funds supplied by the National Geographic society, seek a desirable location for an observatory, with Beluchistan as his first objective. Later he will go to southwest Africa, in search of a probable site for an observatory there.

Effect on Barometer. Since 1922 researches have been conducted under the most unusual solar conditions known to modern science through a marked long-continued low period in the amount of heat thrown out by the sun. Whereas the normal has been established as 1.94 calories per square centimeter per minute, this value, known as the solar constant, since 1922 has been as low as 1.90, or 2 per cent below normal. At present it is 1.93 and showing a tendency to rise. The phenomenal drop was first announced by Doctor Abbot in April, 1923, and he then pronounced that departures of some sort from normal weather conditions might be expected.

Mr. Clayton says that changes in the sun's heat almost immediately affect the barometer and the thermometer in western Canada and western United States, perhaps as a reaction from the tropical atmosphere, traveling with the velocity of sound. The atmospheric waves thus set up drift slowly south and east, and three days later are observable at New York city. Strangely enough, it has been shown that it is not an increase, but a decrease of solar heating that makes it warmer in the east.

Morse V. halers Lead World in 1925 Catch

O lo -Th whali g season in the Antarctic waters around South Shelland and South Georgia has been very successful as far as the Norwegians are concerned.

The whalers secured 166,000 barrels of whale oil from South Georgia and 166,880 barrels from South Shetland, this being an increase in the amount obtained last year of 50,000 barrels.

At South Orkney, 54,000 barrels were obtained, while off the Mexican coast Norwegian whalers got 22,000 barrels.

The total for the Norwegian companies this year has been 410,000 barrels, while other nations have produced 257,000 barrels.

The Norwegian whaling fleet consists of first-class vessels equipped with radio, and newly built tankers with cookeries. It sails practically over the whole globe, and it has about 4,000 Norse sailors engaged in the trade as

English Social Services.

Cost \$5,000,000 Daily

London.-The cost of social services in England is about \$5,000,000 a day, said William Graham, financial secretary to the treasury in the Labor government, addressing a meeting of local government officers.

Referring to the inancial position of local authorities in relationship to state finance, he said \$800,000,000 was raised annually from local taxes, which was doub'e the amount raised in-1914. In addition, \$1.000.000,000 of the taxpayers' met v. out of a budget of \$4,000,000,000 was handed over to local authorities for social services.

URIC ACID CONDITION

THE uric acid condition is a perverse and obstinate one, and often visits those who have lived a perfectly abstemious and correct life, and seemingly overlooks others who have recklessly disregarded the laws of

But that would not justify disregarding sanitary precautions and throwing scientific rules overboard.

We are surely safer, as a rule, in being particular about our habits and modes of living.

An eminent physician and dietitian of New York, Professor Porter, says that uric acid results from the chemical changes which take place in the albuminoid foods-fish, meat, milk and eggs principally; but that it is never found in these foods nor appears anywhere during the digestive process, nor in the blood under normal conditions, but is manufactured only in the cells of the kidneys and is a waste, or final product of foou

changes. It is discharged with the urine, and when there is too much of it oxidation is not going on properly in the body.

When oxidation proceeds as it should uric acid combines with other substances in the kidneys or bladder abandoned one at Sisal, a few miles and is discharged from the body as farther west. Sisal, however, is the such compounds.

One of these compounds, for example, is sodium urate, which is without shelter. Merida, the capital, a formed by combination of uric acid thriving city of 50,000, is on the site with sodium chloride (or table salt) which circulates in solution in the Tiloo. blood.

Too much uric acid also means improper chemical changes in the albuminoid food, and that the uric acid has produced disease.

The tendency to excessive formation of uric acid is common in middle life and old age.

It may come from worry and want of sleep, overexertion, improper diet and free use of alcohlic beverages. It is seen in such joint diseases as rheumatism, gout, joint diseases, and various forms of indigestion.

It may lead to the formation of hard stones in the kidney or bladder, which are very much more troublesome than those which are soft and easily broken.

It may be absorbed from the kidneys into the blool and deposited in the joints and other tissues.

When it is present or suspected the bowels and kidneys must be kept moving freely, water and milk drunk in abundance, and simple, laxative food eaten, such as bran, oils, prunes, figs and baked apples.

Albuminoid foods must be eaten sparingly, especially meat, fish and

As these substances are responsible for uric acid, the less they are eaten the less, as a rule, will there be of uric acid. (© by George Matthew Adams.)

MEXICO'S TWO RICH PENINSULA STATES

Furnish Most of the World's Sisal Hemp.

Washington .- "Clashes between Indian tribes along the border between the Mexican states of Campeche and Yucatan recently threw into the spotlight of the day's news two of the potentially richest of the commonwealths comprising the Mexican republic," says a bulletin from the Washington (D. C.) headquarters of the National Geographic society.

"Campeche and Yucatan together with the territory of Quintana Roo embrace the entire peninsula of Yucatan, except a small portion of the east coast within the boundaries of British Honduras and a section of the heavily wooded interior where an arm of Guatemala runs up from the south. From the two peninsula states comes most of the world's production of sisal hemp, which is next to manila hemp in durability and strength. The region also furnishes valuable timber, agricultural products, and live stock. Home of Sisal Hemp.

"Although the greater part of the area of the peninsula is one vast plain, at a small elevation, the two states are strikingly different in many respects. Campeche has fairly abundant rainfall, dense forests, and a number of minerals throughout its 18,000 square miles. Yucatan, on the other hand, presents a dreary aspect, unwatered by rivers or streams, with little agriculture and no minerals. Yet this arid region affords the chief source of wealth, henequen or sisal hemp. Yucatan, with Quintana Roo is about twice as large as its neighboring state, yet, with 315,000 people, it has almost four times as large a population.

"Despite the sparseness of its rainfall, Yucatan is not totally arid. Water can be found in any section of the state not far beneath the surface. Although there are no rivers of importance, the limestone formations underground are honeycombed with water caves-termed locally 'cenotes'-and subterranean streams. The Indians knew of these caves and rivers ages ago and marked their courses on the surface with heaps of stones, never building their cities except along the flow of an underground stream. Every pueblo and ranch has its well and a constant supply of fresh cold water for drinking and irrigation purposes.

"The fertility of the soil increases in the northeast and southern portions of the state, where there are thick dye and cabinet-wood forests. This is also the home of the beautiful Yucatan turkey and the venerated quetzal, the Mexican bird of paradise, sacred to some of the Indian tribes.

"With a coast line of 600 miles Yucatan has only two harbors, Progreso, the principal port, on the northern coast of the peninsula, and an old better harbor of the two, for Progreso is no more than an open roadstead. of the ancient Maya metropolis of

"Yucatan is of especial interest to archeologists on account of the remarkable ruins of the Maya civilization found there and throughout the peninsula. In the culture scale these Indians stood at the head of the American tribes. The remains of their prehistoric temples and cities are of utmost interest and beauty.

"Better favored with natural resources, Campeche is handicapped by lack of labor and adequate means of communication. Great tracts of virgin forsts and unutilized wealth and advantages await the stimulus of foreign capital and initiative. The seat of government, of the same name as the state, is connected by railway with Merida, the Yucatan capital, and some of the plantations have light railways. Logwood Valuable Export.

"One of the principal products of the province is logwood, a heavy red timber, which contains a crystalline yellow substance called hematoxylin -used extensively in dyeing and in coloring wines. The annual export of this product alone in 1923 was valued at more than a million pesos. Campeche stands second only to Yucatan in the production of henequen, or sisal hemp, as well as the usual tropica! products such as sugar cane, rice, to bacco, indigo, cotton, etc. Many of the natives make a good livelihood manufacturing the so-called Panama

"Campeche, the capital, is a quaint old city of 18,000 inhabitants. Founded in 1540 by Francisco Montejo, it is. therefore, one of the oldest cities in America. During the adventuresome buccaneer days of the Spanish main it was sacked repeatedly by pirates until its bastioned and fortified walls, segments of which are still standing, were hastily erected.

"The town is over a system of im mense subterranean caverns, excavated by the early Mayas and used by them as catacombs. The moist sea air imparts a venerable look to the port buildings, all of which seem houry with age.

"Both states are paradises for the hunter or naturalist and abound with game, fish and gorgeously colored birds and flowers. In the forests panthers and boa constrictors lurk, while in the more open country there are wild boars, dier, the tapir and bright-plumaged birds. Shark fishing is one of the exciting sports along the coasts, where an endless and holy war is waged against them."

THE MANAGING OF OBED

By CHAPIN HOWARD, Jr.

(© by Short Story Pub. Co.)

RS. TUTTLE sat rigidly upright in the familiar rockingchair in the kitchen. Her hands were clasped tightly in her lap, and upon her face, framed by the limp, velvet bonnet strings there was an expression almost of terror as she gazed across at the tall old clock in the corner by the mantlepiece. She remembered her first glimpse of it, 30 years ago, on the day her hus-

She had been to the city for three days with her husband, Obed Tuttle, to visit their married daughter, Emeline, and they had come home on the stage that afternoon.

band brought her to the farm, a bride.

It was the first time Mrs. Tuttle had been away from the farm over night in more than 15 years and the luxury of her daughter's home came to her as a revelation. The rugs, the polished floors, the snowy, flower-strewn tablecloth, sparkling with glass and silver in the rose-shaded candle light, the watchful, attentive maid-every detail had appealed to the starved senses of the older woman with a comfort that was almost physical.

The first night at dinner Emeline had told her she looked tired and overworked—that it was a shame, since he could afford it, that her father didn't hire a girl. And her husband, a grave-mannered young doctor, had looked up abstractedly and added that he had read somewhere that nearly 30 per cent of the women in the insane asylums were farmers' wives. Obed had gone on pouring his tea into his saucer as if he had not heard, but Mrs. Tuttle had stared at her son-inlaw for several minutes with frightened, faded eyes.

The words had seemed to hold for her a strange significance. The lean, hard-worked little woman had never considered the possibility of breaking down. The work of the farm, after the creamery was added, had grown harder with every year, but she had never complained—it kept her from feeling lonely since the children had grown up and gone away.

As she sat in the twilight in her shabby, turned black silk, listening to the ticking of the clock, she thought of the future with a kind of helpless terror. She could not always go on slaving so. Obed would think it was a foolish expense, but she needed someone to help about the harder work. There were no longer the children to think of now, and they could afford to relax the hoarding and self-

denial of a lifetime. She rose nervously and lit the lamp. Then she took off her bonnet and set about preparing supper with trembling hands. She knew that she must speak while the sense of her freedom was still upon her-before they had settled back into the familiar routine against which it would be useless for her to struggle.

But it was not until the supper dishes had been cleared away and her husband, having finished the evening chores, had sat down to read his weekly paper in the circle of lamplight by the table, that she found the courage which she sought. She was standing at the sink, and she spoke without looking around:

"Had you thought anything of what Emeline said about a girl?'

He paid no attention, and she wondered if he had not heard.

"Obed," she insisted, "Emeline said she thought-now you could afford it -you ought to hire a girl."

The paper moved impatiently. guess we've always managed," he said. "I don't see no reason fur changin' now.'

Mrs. Tuttle drew in her breath sharply. For a long time she stood looking fixedly at the dish she had been washing. Her spare figure in its shabby black dress was tense.

"It's men like you, Obed," she broke out, "who help fill them asylums up with farmers' wives. I've worked and slaved for you in this kitchen all my life, and you've been gettin' meaner an' meaner every year. If you should ever die," she went on breathlessly, "I've got the text for your funeral sermon all picked out. It's in the forty-eighth chapter of Isaiah, the fourth verse. I've had it marked in my Bible more'n twenty years."

She closed her lips tightly, as if frightened at her own daring and, turning back to the sink, went on quietly with her work.

Half an hour later, when she had gone up the creaking stairs to the north bedroom, her husband laid down his paper and listened. Then he got up cautiously and, crossing over to the mantel, took down the worn Bible. There was a book-mark worked on perforated cardboard at the fortyeighth chapter of Isaiah, and the verse was marked with a double line

of faded penciling:

"Because I knew that thou art obstinate, and thy neck is an iron sinew, and thy brow brass." It was nearly a week later that Obed first noticed that his wife was acting queerly. He came in to breakfast one morning after the chores were done, and found she had brought her rocking-chair out onto the back porch. She sat with her hands folded idly in her

lap, rocking to ond fro. "Why, what's the matter, ma?" he asked, stopping in the middle of the path, milk-pail in hand. "Ain't you feelin' well?"

"No, she answered, looking dreamily out across the fields, "no I'm just restin'. It's lovely ain't it, this time o' year? I've always said the fall was the time fur me. Preakfast is ready, but I guess I'll just set out here—an'

Obed went in, bewildered, to a solitary meal, and all the while he ate he watched his wife furtively through the

For the next few days he noticed nothing out of the ordinary, except that he often caught her staring at him intently, and frequently the table was badly set.

One noon the dinner-bell summoned him as usual from the field. He came home wearily and washed up at the pump outside. Then he entered the kitchen, and stood staring. The table was spread with the customary red tablecloth. It was covered with pies. There was nothing else. Apple, pumpkin, mince and squash stared back at him. Mrs. Tuttle was cutting large pieces from each and heaping them lavishly upon a plate.

"I thought I'd have just what you liked today," she said, smiling up at him as she stood back to survey her

Her husband stared at her in dumb bewilderment. There was a look of absolute terror in his eyes.

"I don't want pie!" he stammered. "Why, Obed!" she said, reproachfully, "you always liked my pies. I've made a lot of 'em. I guess"-looking at him wistfully-"I've made enough to reach from here to the asylum." He turned and left the room, his

teeth chattering. That night at two o'clock he was awakened by the sound of some one moving about in the kitchen downstairs. His wife was gone from his side. He sat up in bed and listened. The sound had ceased, and an uncanny stillness filled the house. He got cautiously out of bed and slipped on his clothes. Then he groped his way to the head of the back stairs and listened. The door at the foot was unlatched, showing a faint streak of light. There was the sound of something being dragged across the kitchen floor. Obed shivered a little, and then began to grope his way down, one step at a time. When he reached the bottom he pushed the door open cautiously and peered into the kitchen, blinking a little at the light. There was a small hand-lamp on the table, and in the center of the kitchen floor knelt Mrs. Tuttle. Her blue-checked apron and calico skirt were pinned up about her knees, and on the floor beside her was a pail of water. Her sparse, black hair was drawn tightly back and fastened in a small knot by large, plainly visible hairpins. A few stray wisps had escaped and hung against her shrunken cheeks. She had paused to wring out her cloth, and her eyes, fixed on the blank space of the opposite wall, had the glassy stare of a sleep-

"Ma!" said Obed, in an awed voice. "Why, ma!" He stepped cautiously into the room and picked his way gingerly across to her, between the puddles. She seemed not to know that he was there, but shook out her cloth and, leaning forward on one hand, began to mop the

walker. On one of her thin, work-

worn hands gleamed her wedding ring.

He touched her shoulder. "Ma," he said, "be you awake?"

She paid no attention, but went on steadily with her work, her arm moving in large half-circles. He stood looking down at her for several minutes. His jaw dropped. Then he moved quietly across to the table and took up the lamp. He came back and stood beside her. She looked very worn and frail as she knelt there on the floor at his feet, the lamp-light making a blurred circle around her on the wet boards. He stood looking down at her for a long time, while his hard, stubborn face began to work. But he said nothing. Mrs. Tuttle mopped the entire floor, moving about on her knees and dragging the pail after her. Then she began again.

"Ain't you gettin' tired, ma?" he asked gently.

Mrs. Tuttle stared straight in front of her.

"I want ter leave the house lookin' neat when I start fur the asylum," she said mechanically.

He leaned forward. His hand shook, but he held the lamp so that the light shone full upon her face. It was set

"You ain't goin' ter the asylum, ma," he said, soothingly, as one speaking to a child. "You go upstairs and go ter bed. I'll get Milly Pettingill in the morning. She can stay here right along and do the work. You ain't a-goin' ter the asylum-" his voice broke.

Mrs. Tuttle did not move for several minutes. Then, with a sigh, she rose slowly to her feet and, taking up the pail, walked unsteadily across the kitchen to the sink. She dried her hands on her blue-checked apron and hung it carefully upon a chair by the stove. Then she went quietly upstairs.

A fortnight later Mrs. Tuttle was sitting on her back porch after dinner, rocking placidly to and fro. From the kitchen came the reckless clatter of dishes and the shrill tones of a girl's voice singing. Mrs. Tuttle smiled uncertainly.

"I guess she's breakin' about everything I've got. But I ain't worryin'. No," she went on, her glance straying idly across the fields, golden in the autumn sunshine, "no, I'm just restin', an' it's about time I begun. I'll have to tell Obed some time, I suppose, but" -a quizzical look stole into her faded eves-"that night I got up an' mopped the kitchen floor at two o'clock with him standin' by holdin' of the lampwell, it's the first real bilarious time I've had in thirty years!"

In the With Cheerups and the Quixies by Grace Bliss Stewart

MR. LION'S VISIT

DEAR," growled Mr. Lion softly to Mrs. Lion, one warm evening just before dark, "I have something on my mind. I am wor-

"I've noticed that you weren't quite yourself lately," purred Mrs. Lion kindly, "and if it's a problem you can't solve, why don't you go to this famous Cheerups that Gray Ears the Elephant is so excited about?"

"Now, Mother Lion, have you been talking to Gray Ears?" said Mr. Lion with his most severe frown. "Didn't I tell you never to do that? He's about the only animal in the Jungle that we have reason to fear, and then you run

When He Saw Mr. Lion's Shiny Eyes, He Was Astonished.

right into danger. I am really vexed with you."

"Goodness, no, Father, I'm not so foolish as that," replied Mrs. Lion. "L was safely hidden in the tall grasses spectacles which sleepy Brighteyes and overheard what Gray Ears was took from his pocket. They made him saying to Lizzie Lizard. He talks so loud that nobody can help hearing, and we have very good ears in the Lion grew. family, you know. They talked a long time about this Cheerups person, and some wonderful things. Maybe he could help you, too."

"It's worth trying, my dear," said Mr. Lion. "Your advice is often good. I'll set out now to find this wise one.'

"Good luck," called Mother Lion, as she turned back to the cave and gave her sleepy little babies, Tawny and Fuzzy, a pat with her big soft paw. Down the Winding Way went Mr.

Lion, along by the Yellow River and through the Twisty Vines, until he came to the little clear place where Cheerups lived. Mr. Lion's eyes are made so that he can see as well at night as in the daytime, and he discovered the little palmleaf house which the Quixies had built for Cheerups, even though it had grown quite dark and the first Twinkly Star was out.

But Cheerups couldn't see so clearly as that, and Brighteyes was sound asleep on his spiderweb. So when he saw only Mr. Lion's two shiny eyes, like balls of fire coming toward him, he was most astonished. "Had the moon dropped out of the sky and broken in two from the fall?" thought he. "Maybe there was going to be a garden party in the Jungle, and the lanterns were just being lighted. Or could it be possible that the animals had automobiles, and these two bright spots were headlights?

"Goodness, but they are getting close! I guess I'd better play policeman and stop the traffic. That will be fun," said Cheerups to himself.
"Stop!" he shouted as loud as he could. "You are running into some

"And begging your pardon, sir, that's just what I want to do," came a low rumbly purr. "I don't mean exactly run into you, of course," the voice went on, for Mr. Lion is the politest animal in the world, "but just up to your front door, so to speak. Are you by any chance a very famous and kind person named Cheerups?"

"That is what I am called," replied Cheerups, who was rather bewildered by this voice out of the dark. "But I should like very much to know who is my visitor. Oh, Brighteyes, did you happen to bring the Magic Spectacles with you? There, that's better," sighed Cheerups, as he put on the look so wise that Mr. Lion's confidence

"Now I see that it's Mr. Lion with whom I have the honor to speak. I both agreed that he had told them Majesty, the King of the Beasts. If I have always wanted to meet His weren't too small, I should like to shake your paw, sir. Being small is a great drawback, Mr. Lion, unless you are in a tight place," said Cheer-

"And speaking of tight places," cried Mr. Lion, "now that you have started the subject, that's the very thing I came to see you about,"

THE WHY of SUPERSTITIONS By H. IRVING KING

THE MAGIC ELDER

THE elder figures prominently in Europe and this country in folklore. In Canada and the United States its use in folk-medicine is universal. Elder wood carried in the pocket wards off certain physical afflictions; "frumity" made of elderberry pulp worn in a little bag hung round the neck keeps off rheumatism; the inner bark, boiled to a tar-like consistency, is recommended for plasters; the elder blooms allay inflammation; the virtues of elder blow tea are known to everybody and a tea made from the bark acts in one way when the bark is scraped down and in the opposite manner when the bark is scraped up. When New England housewives have trouble with their soft-soap they set matters right by stirring it with a stick of elder and the elder leaves keep flies out of the house. To beat a boy with an elder rod stunts his growth. Formerly the elder was considered as a protection against witches though, strange to say, witches used to gather at night under elders and in some sections, even now, it is considered unlucky to touch the elder after dark

All these and many more superstitions regarding the elder are but a survival of the tree worship of our barbarian ancestors; as is evident from the fact that to this day when a Saxon or Danish peasant is about to cut elder he prays with folded arms three times as follows: "Oh, Frau Elder. give me of your wood and I will give you of mine when it grows in the woods."

In Germany wreaths of elder are hung up as protection against light-

(@ by McClure Newspaper Syndicate.) Oldtime Stamps

Curious revenue stamps which had their origin in Civil war time were the private proprietary stamps affixed by manufacturers to their product and bearing advertisement of that product. In that class were patent medicines, matches, perfumes, playing cards and so on. Thus was paid the tax on "parlor matches," on such preparations as "galvanic horse salve," on "magic pain extractors," and on hair restorers with trade-marks showing girls of the pre-bob period. At that time was engraved the plate of a stamp of a denomination of \$5,-000, but it was never issued. Of highest value today is the \$1,000 stamp for documentary purposes .- Exchange.

Lesson for October 4

PAUL IN ATHENS

LESSON TEXT—Acts 17:16-34.
GOLDESN TEXT—"For Him we live, and move, and have our being."—Acts

PRIMARY TOPIC-Paul Tells the People About God.

JUNIOR TOPIC—Paul Preaches on

Mars' Hill.
INTERMEDIATE AND SENIOR TOP-IC—God the Father of All Mankind.
YOUNG PEOPLE AND ADULT TOP-IC—True and False Ideas of God.

I. The Idolatry of the Athenians

Athens was the intellectual metropolis of the world at that time, the home of the world's greatest eloquence and philosophy. Paul's spirit was stirred within him when he saw the city wholly given to idolatry.

II. Paul Disputing With the Athenians (vv. 17-21).

1. In the Synagogue (v. 17a). True to his usual custom, he went into the Jewish synagogue and entered into earnest argument with the Jews and devout persons

2. In the Market Place (vv. 17b-21). From the Jews he turned to such as were found in the market place. Here he came into touch with the Epicurean and Stoic philosophers. The former were atheistic materialists. They denied the doctrine of creation, and gave themselves up to sensual indulgences since they rejected the idea of a future judgment. The latter were pantheists. When they heard the preaching of Paul they desired to know what new doctrine he preached, so they invited him to the Areopagus where he might speak to them of his maintained. These are days when know what new doctrine he preached, where he might speak to them of his new doctrine. They inquired as to kindness and firmness must be blendwhat this "babbler" might say. Since the Athenians spent their whole time take the place of vital Christianity. either in telling or hearing some new thing, they were willing to listen to Paul. The word, "babbler" means literally, "seed picker." They conceived Paul to be a globe-trotter who had gathered up seeds of truth here and there over the world, and that he was somewhat like themselves, interested in talking about that which he

III. Paul's Address on Mars' Hill

1. The Introduction (vv. 22-23). He did not accuse them of superstition, but as in the Revised Version, and His power to save. he introduces his discourse in a courteous and conciliatory manner, stating that he perceived that they were very religious. This he explains by saying that as he was viewing their city he beheld an altar with an inscription to the unknown god. This was his point of contact. He proceeded at once to connect it with the idea of the living God, implying that this al-

2. The Body of His Discourse (vv. 24-31) (1) A Declaration Concerning God

(v. 24-25). a. He created the material universe

tar had been erected to Him.

(v. 24). This was a direct blow at the philosophy of both the Epicureans and the Stoics.

His Spirituality and Immensity (vv. 24-25).

He is not worshiped with men's hands as though He needs anything, neither is He confined by any sort of a religious temple. Being essentially spiritual, He demands heart service, and being transcendent, above all, He is not confined to earthly temples.

c. His Active Providence (v. 25). He gives existence, bestows needed gifts, and as sovereign, directs all things.

(2) A Declaration Concerning Man (vv. 26-31).

a. This was a blow at the foolish Athenian pride which supposed that they were superior to all other people. This proposition he proved from their own literature (v. 28).

b. Nations have their place by the soverign purpose of God (v. 26).

c. Men Should Seek God (v. 27). His goodness and grace in supplying all our needs, and ordering that even the affairs of the nations should move men to see and seek God.

d. The Pressing Obligation to Repent (vv. 30-31). This was his supreme message.

IV. Results of Paul's Preaching (vv. 32-34). 1. Some Mocked (v. 32).

This is even the case today. Men and women will mock the preacher who preaches a judgment to come. Some Procrastinated (v. 32).

Many do not mock, but they hesitate to accept and act upon the urgency of the message.

3. Some Believed (v. 34). Wherever the gospel is preached there are some who believe and are saved.

As Men Succeed

Men succeed in proportion to the fixety of their views and the invincibility of their purpose. If you can find out a man's quitting point, the place where he gives up, turns back, you can measure him pretty easy.-Marden.

Children's Prayers

Jesus loves to hear the earnest prayer of a little boy or girl more than He does a long hypocritical prayer of a big preacher.—Gospel

THE -CHRISTIAN ENDEAVOR

- From --Moody Bible Institute Monthly Chicago, Ill.

October 4 How Can Our Society Benefit Our Community? Matthew 5:13-29

Let us seek to answer the question involved in the topic by asking two other questions. First, is there any essential difference between a Christian society and the community in which it is placed? Second, if so, what is that difference? The same community life is open to all, the same community activities may be enjoyed by all, common laws and community ideals bind all together. Community interests, aspirations and improvements are shared by all. What then is the essential difference between the two? Has the Christian society anything vital and valuable which the community as such does not possess? Yes, it has. If the society is composed of true Christians it has something which the community has not. It has a life, a joy, an ambition and a hope which the true Christian alone can know. A Christian is one who is "in Christ," a branch in the true vine, a member of the body of which the risen Christ is the head.

The Bible recognizes two classes of people, those who have been born once and those who have been born twice, those who are saved and those who are lost (John 3:3; 5:24; 2 Cor. 5:17;

Luke 19:10). The society can best benefit the community by observing this distinction, assuming it, acting upon it, living it. Why not? It is God who makes the distinction, not man. His believing people it is written, "Ye are all the children of light and the children of the day. We are not of the night, nor of darkness" (1 Thess. ed. A vague religiousness can never

The society can help the community by a consistent testimony maintained in daily life and by spoken word, by making the society meetings attractive and worth while, by ringing true to the Christian profession and by earnestly co-operating with the church to make it a strong saving force in the community. The distressed should be visited and helped, law enforcing agencies should vigorously supported and every good work reinforced, but nothing should be allowed to supplant the chief work of the society, which is that of main-taining an effective witness to Christ

Harp Loses Eminence

Tara's famous harp is disappearing and fast becoming but a memory. At the recent Feis Cecil at Dublin, the festival to which Ireland's budding musicians come annually to submit themselves to tests set by eminent adjudicators-there was only one entrant for the harp competition and only one, also, in the competition for a song with harp accompaniment. It is explained that the harp is at a disadvantage as compared with the violin and other instruments of smaller bulk, since it is not easily portable for private entertainments, and being essentially an instrument of the individual, it can never hope to find a place as an the piano. But whatever the reason, the fact remains that the harp is becoming almost as extinct in Ireland as are the snakes banished by St. Patrick.

Famous Royal House

The name "House of Bourbon" is given to the royal family that for many generations occupied the thrones of France, Naples and Spain, and still reigns in the last named country. The house of Lourbon was founded about 900 A. D., by Adheniar, lord of Bourhon, who traced his des ent to Charles fartel. The first French sovereign of the line was Herry of Mavarre who in 1589 became king with the title of lienry IV. 'the Bourbon family retained the throne of France until the French revolution when it was deposed in the person of Louis XVI. In 1814, after the fall of Napoleon I, it was restored to power and held the sovereignty until 1830, when the house of Orleans, a younger branch of the Bourbon family, succeeded it.—Kansas City

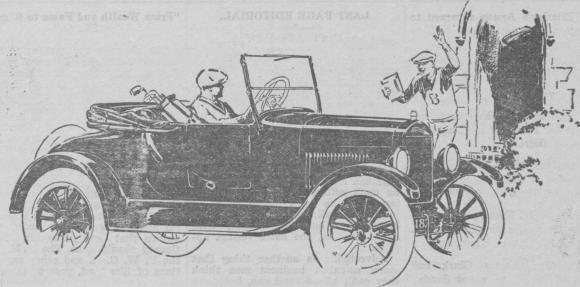

The Trusting Sex

"Well, dear," said Mrs. Jones, as her husband one evening dragged himself wearily up the porch steps and sat down with a sigh in his favorite rocker, "how did things go at the office today?" Mr. Jones sighed again, and fanned himself with his straw hat as he replied, absent-mindedly, "They didn't go well. They didn't go well .. They didn't go well at all. I had a ninety-three and I should have had a ninety-two."

Mrs. Jones smiled. "Ninety-two orders in one day," she cooed. "I wouldn't call that bad for a beginner!"

Champion Freak Wager Two members of the Turnverein "Gut Heil" of Krefeld, Germany, are rolling a barrel 9 feet high and 6 feet in diameter, along the German frontier to win a wager. According to the conditions laid down they are to roll this 769-pound cask around the entire German border within a year. This requires them to cover at least 6.9 miles daily. Thus far they have averaged 12.2 miles since they started in Januar

BEAUTY . COMFORT . CONVENIENCE . UTILITY

Good Looks as Well as Good Service

The improved Ford Runabout, with its all-steel stream-line body, is an unusually good-looking car.

It hangs low to the ground, and the body has been lengthened and re-designed for greater comfort and convenience.

The gas tank under the cowl is filled from the outside, and the weatherproof storm curtains open with both doors.

Under the sweeping rear deck is an unusually large compartment designed for convenience in carrying luggage. RUNABOUT

Standard equipment includes four cord tires, nickeled head-lamp rims and windshield wiper. The price remains the same \$260, and you can buy on the Ford Weekly Purchase Plan.

FORD MOTOR COMPANY, DETROIT, MICH.

PRICES INCREASE IN

rirestone

Double the Mileage at Half the Cost

Only a few years ago a 32 x 4 cord tire listed over \$50.00. Today, you can buy the highest quality 32 x 4 tire-a Firestone Gum-Dipped Cord—for about \$26.00.

Last spring crude rubber cost tire makers around 40 cents a pound. Today, it is over 90 cents a pound.

It was not so long ago that 7,500 miles represented the average life of a cord tire, while today, 15,000 miles - and more - is only the usual performance for a Firestone Gum-Dipped Cord.

Due to large, concentrated production, specialized machinery and simplified factory methods, together with economical distribution, Firestone is able to keep tire prices low -no matter where the price of crude rubber goes.

And, because of special Firestone processes, chief among which is Gum-Dipping, motorists are today getting thousands of extra miles by using Gum-Dipped Cords.

Gum-Dipping is an exclusive method used by Firestone. It is an extra process, carried out in special Gum-Dipping plants, after which the cords are put through the usual calendering machines. Gum-Dipping insulates and impregnates every fiber of every cord with rubber, and practically eliminates internal friction and heat, and builds strength and endurance into the tire.

In the day-in and day-out service of taxicabs, buses and trucks -on the cars of hundreds of thousands of motorists everywhere-Gum-Dipped Cords are giving unheard-of mileage, dependability and satisfaction.

Get ready for the coming months of slippery pavements and bad roads. Assure yourself of greater safety, comfort and economy by equipping now with Firestone Full-Size Gum-Dipped Balloons.

Has Sun a Companion?

What may be a genuine companion wealthiest noblemen in the world to- to the sun has been discovered in the constellation of Taurus, the Bull, acteen years of age, his mother man- cording to a study by Dr. W. J. Layages family affairs. She decided to ton, of the Harvard College observaclose Arundel castle until her son was | tory. The star, which is known as 46 Tauri, and just barely visible to the unaided eye, has been observed at the Lick observatory in California, and the Dominion Astrophysical observatory at Victoria, B. C. It is approaching the sun at a speed of about half a kilometer per second, which is a very slow velocity, astronomically speaking. As its motion across the sky is also more than realized in America, says able to struggle along in spite of taxes. relatively slight, it is believed to be moving through snace with the sun.

GUARD 687,000 GAME ANIMALS

Forest Service Workers Report Increase in Number.

Washington.-More than 687,000 head of big game animals make their home in Uncle Sam's 159 national forests, announces the forest service of the United States Department of Agriculture, which has just completed the compilation of a count made in

Compared with the previous year the 1924 figures represent an increase of about 44,000 head after due allowance is made for 44,300 head of bear which were not included in estimates of former years.

Forest service officials explain that this increase may be caused by the fact that 1924 was a very dry year, resulting in an unusual concentration of animals around watering places which enabled the forest rangers to make closer estimates. Only animals using national forest ranges are included, no account being taken of animals which graze on adjacent federal lands or on privately owned areas.

Deer represent the vast bulk of the game animals with a total of 550,000 compared with 511,200 in 1923.

The five states credited with the largest number of deer are, in order; California, Oregon, Montana, Idaho and Arizona. Alaska is credited with about the same number-50,000 head -as the last two.

In the 1924 estimates bears were included as game rather than as predatory animals, the figures showing 44,-300 head. Of this total 38,700 were of the black and brown varieties, 5,600 being grizzlies. Nearly all grizzlies listed were found in Alaska. Montana is the only state in which the forest rangers were able to find more than a scattering few of this bear.

Elk have increased, more than 52,600 head being listed for 1924 compared with 49.500 in 1923. In the Teton National forest bordering the Yellowstone park the elk herd has shown a notable

The number of moose in 1924 shows a loss, only 5,100 head being shown compared with 8,000 in 1923. It is explained this difference may be attributed in large part to more accurate estimates. The number of mountain goats is given as 12,400 and 17,200, respectively, a slight increase of buffaloes are to be found only in protected herds.

Antelope, or pronghorns, are still in a very unsatisfactory condition. The 1924 count shows only a few more than 5,000 of these animals, most of which are in Arizona and Idaho.

Fear Dam Will Erase Indian Rock Relic

Philadelphia.-The threatened obliteration of the famous Indian rock in the Susquehanna river at Conowingo by the construction of a huge dam for electric power at that point is rousing protests from many groups.

Hieroglyphs, said to be the oldest Indian writing in America, are written on this and other rocks of the region.

Members of the Smithsonian Institution and other scientific groups have asked that these "prehistoric chickentracks," relics of aboriginal life in America, be preserved. Interest has been roused to such an extent that the Susquehanna Power company has offered \$5,000 to aid anyone who will ngage in their removal or presen

Mystery and romance of prehistoric days surrounding the picture-scratched rocks, half-submerged in the river, which have not yet been deciphered, add to the appeal for their preservation in the face of the insistent demand for "more power" on the part of modern industry, which has made the building of the dam necessary.

The chief relic, Indian rock, even now is not always visible to human eyes. It is one huge block of granite, a solid islet of rock in the middle of the Susquehanna, and is about 20 by 30 feet in size. Only at low water can it be seen, and it can be located only by boatmen who know the river well.

Built in Day

Bulaski, Va. - Walker's Creek church, about eight miles north of Marion and built in a day, was dedicated the other day. More than six hundred attended the service. The church is a frame building, erected at a cost of approximately \$3,000.

Proud of Tree

Auburn, Maine.-The largest maple tree in the state of Maine is in the door yard of the Hurd homestead at Fryeburg harbor. The circumference of the tree one foot from the ground is 28 feet, and at the smallest part of the trunk it is 22 feet around.

Anglers Must Wear

Labels in Oklahoma

Oklahoma City. — Unlabeled fishermen became taboo in Oklahoma recently. Hereafter they must plainly display upon their clothing the state license, without which they cannot drop bait to hungry fish.

The last legislature, concluding that fish and game wardens should expect co-operation from the men they are set to watch, passed a law, that fishermen must bear the license pinned or sewed in the center of their out-

er garments.

TANEYTOWN LOCALS

Items of news from town, or vicinity are always wanted for this column. Especially accidents, sales of real estate, fires, important happenings, visits to or from the community social events, and all matters of general interest to those at home, and away from home.

Miss Corine Little, of Hanover, was the guest of Miss Mae Sanders over the week-end.

Miss Elsie Dorst, vocal teacher of Western Maryland College, spent Saturday with Mrs. Maurice Duttera.

Taneytown High School won a soccer ball game, last Friday, at Charles Carroll School, by a score of 5 to 4.

Mr. and Mrs. Chas. E. H. Shriner and daughter, Miss Alma, visited Mr. and Mrs. Calvin Smith, in Littlestown last Sunday.

Mrs. John Gipprick, of Philadelphia Sunday with Mr. and Mrs. E. C. Sauerhammer.

> The following "movings" on Fairmove from Harvey E. Ohler's double house, to Rocky Ridge; Mr. and Mrs. Ohler will vacate their present single tate, paints houses, marries folks in his capacity of justice of the peace, runs the postoffice, sells stamps, hams, molasses, etc. and takes boarders house, and move into the half house upstairs. I reckon you'd call it a drug vacated by the Lentz's; J. Thos. Lemmon and family will move into the Ohler house vacated; Mr. and the house vacated by the Lemmons, the property having been purchased by Mr. Mehring some time ago. Rob-

Great Frederick Fair.

The sixty-fifth annual Frederick Fair, October 20, 21, 22, 23, will be of unusual interest by reason of the great diversity of features that are promised. In addition to a program running races, large exhibits in the stock and poultry classes and in the farm and garden departments, there well as an instructive demonstration by the Maryland Fish Commission.

LAST PAGE EDITORIAL. Can't Afford It.

There are some things one can't afford and some that one only thinks he can't afford; and the one who can judge clearly between the two, and follows correct judgment, is wise. First of all, we can't afford to take big chances, and the poorer we are financially the less able we are to

The business man who is not back-Mr. and Mrs. Milton Crouse, spent ed by surplus capital, can't afford to the week-end at the home of Thomas do much long-time credit business. If he can't afford to carry ample fire insurance, he can't afford to be in business at all; and if he can't keep his place of business, bright, neat and attractive, the same verdict ap-

Mr. and Mrs. Charles Clark and children, of Baltimore, spent Sunday

Advertising is another thing that many so-called business men think they can't afford—and can, but don't evening, with Mr. and Mrs. Ernest know it. Usually the man who don't know enough to advertise, is apt to be mistaken in many other ways.

Whether in business or not, no man can afford not to do those things that operate for his betterment, and who does not make use of time tested plans, and business and social maxsms. He must be honest, play safe,

Mrs. Harry M. Clabaugh, who spent threatened with symptoms of typhoid the summer months at Antrim, left fever, is very much better and is up thin ice," nor those who "skate on thin ice," nor those who follow extremes of fashion, nor those who imitate financial higher-ups, nor those who splurge regardless of cost. Nor can anybody afford not to take the best possible care of his business

If we could only get into the way of realizing it, what one can afford, and can't afford, is about the most important thing we have to consider in life—and business.

"What kind of store is that fellow over at Toad Road running?" asked

"Well, he has Ford parts for sale," The following "movings" on Fair-view Ave., are about to take place; Mr. and Mrs. John H. Lentz will re-eggs and poultry, deals in real estate, paints houses, marries folks in store."-Kansas City Star.

The French Debt Situation.

The American Debt Commission, in onference with Finance Minister Caillaux and advisers, of France, have been working all week to agree on terms of settlement of the debt of four billion dollars that France owes in complete disagreement. The first proposal of the French was to pay certain sums a year, covering a period of 68 years, which proposition was emphatically declined.

A compromise proposition was finally reached, subject to approval by the French Government, of the payment of \$40,000,000 a year for five years, interest payments for the same period being included and at the end of that period the question of payment of the

remainder will be taken up.

M. Caillaux gave American commissioners the hope that he believed had been intrusted by his government he said, to sign only a final settlement

The above is the caption of a lectre that will be delivered by J. rthur Schlichter, of Philadelphia, ture that will be delivered by J. Arthur Schlichter, of Philadelphia, on Sunday, Oct. 4, 1925, at 11 A. M., in Blue Ridge College Auditorium, at 3:00 P. M., in W. M. College Alumni Hall, and at 7:30 P. M., in the M. E. Church, Westminster. Mr. Schlichter will be accompanied by Thomas C. Dalius, musician, who writes his life story in verse and sings it to his own accompaniment on a guitar.

This lecture program attracted a great deal of attention, this year, at Ocean Grove, and elsewhere, and abundantly vouched for as a wonderful message, out of the ordinary, and stories that everybody in Carroll County should hear. The Y.M.C. A., the Y. W. C. A. and other organizations of like kind, present them.
